WILLSONS

Send for list of rare Foreign birds.
37, NEW OXFORD STREET, LONDON, W.C.

BOOKLET FREE.

Finest Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all time to send my Parrots on four week's trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among Grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all Parrot buyers. Full details of our original system of selling Parrots on four weeks' trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard. Telephone No. 40 Morecambe.

Club Reports.

BLANTYRE O.S.

Meeting held March 26th, in Mr. Struther's, Mr. Samuel Hannah, Pres., in the chair. There was a good attendance. Our show was fixed for November 6th, and we have engaged Mr. Allen Chalmers (Kirkintilloch) as judge.—D. BERRY, Sec.

BRISTOL C.B.S.

Monthly meeting, held at headquarters, the City Hotel, on April 8th. Mr. W. A. Mavey presided over a good attendance, despite the inclement weather. Mr. R. G. Clark promised to give a washing exhibition at Headquarters, at the next meeting, May 4th. It is hoped that members will make a special effort to attend. It also appeals to those who have not quite mastered the art of putting the birds through the tub. It was arranged to hold our First Feather and British Bird Show, the first Saturday in July. On May 28th, if the secretaries can make the necessary arrangements, it was decided to have a ramble, and a well-known birdy rendezvous will be visited. I shall be pleased to receive applications for membership.—MISS L. G. BYERLEY, 2, Ashley Court Villas, Ashley Hill, Bristol.

HAMILTON (Cadzow Oaks) O.S.

Meeting, held on April 9th, Mr. W. Hamilton, president, in the chair. The chairman announced the sudden death of the wife of our worthy Vice-president, Mr. J. Braidwood. The secretary was instructed to write a letter of condolence on his sad bereavement to Mr. Braidwood. An amendment was brought forward against Mr. Shearer's motion, but on the vote being taken, the amendment was lost. Mr. Shearer's motion tabled at last meeting, was, "Appoint two neutral judges from outside of Hamilton, to judge each Young Bird Show." Some thought the Y.B. Show dates were not suitable, but after discussion it was agreed to adhere to the dates laid down in our list of fixtures, namely, first Saturday in May, June, July, and August. The Y.B. Show for May will commence at 6.30 p.m. Birds to be brought forward before then. Mr. F. Brannigan was nominated judge of our May show, one judge only, as it was not expected to have a large entry, on account of the inclement spring. A hearty vote of thanks to the chairman closed the meeting. —A. CANT, Hon. Sec. and Treasurer.

FROME F.A.

Annual general meeting held recently at the Lamb Hotel, Mr. J. F. Swaine presiding over a very large attendance. The secretary (Mr. C. I. Young) stated in his annual report that the balance in hand was better than last year, and there had been a considerable increase in the membership. Ninety-three ordinary members had paid their subscriptions in addition to the list of hon. members. This, he thought, would compare favourably with any association in the West of England. Members had been successful in some of the best shows in the country. The silver cup given by Mr. C. E. Cumberlege-Ware for the best cage bird bred during the year was won by Mr. C. I. Young. The novice cage bird bowl (given by the secretary) was won by Mr. H. Pickford. Mr. Young regretted that after serving thirteen years as hon. secretary he felt he must now resign the post, but his long experience would always be at the disposal of the association, and he should be pleased to render his successor any assistance in his power. During the time he had held the secretaryship they had run about 20 shows, and they had succeeded in paying all their liabilities, and now had a good balance in hand. In conclusion, Mr. Young specially thanked all who had helped him to keep the association going. The financial statement, which was presented by the hon. treasurer (Mr. H. H. Coombs) showed receipts amounting to £208 5s. 6d. and an expenditure of £201 14s. 7d., leaving a balance in hand of £6 10s. 11d., and the association also possesses silver cups and other assets of the value of £8 9s. The report and balance-sheet having been adopted, the election of officers was proceeded with, and resulted as follows:—President, Mr. Charles T. Foxcroft; chairman of committee, Dr. P. Cockey; vice-chairman, Mr. C. I. Young; auditors, Messrs. H. F. Barber and J. F. Swaine; hon. treasurer, Mr. H. Coombs; hon. veterinary surgeon, Mr. W. James; hon. auctioneer, Mr. P. E. Wheeler; secretaries—dogs' section, Mr. T. H. Vincent; cage birds, Mr. A. King; pigeons, Mr. W. Dance; poultry, Mr. Bourton. The vice-presidents were re-elected en bloc, with the addition of Mr. A. M. G. Daniel. Mr. C. I. Young agreed to re-consider his resignation as general secretary. It was resolved that a letter of condolence be sent to the family of the late Mr. W. Henderson, who had occupied an honorary position in connection with the society, the resolution being carried by those present rising to their feet. At the close of the meeting Mr. Swaine was heartily thanked for presiding.

LONGTON AND DISTRICT C.B.S.

Monthly meeting held April 5, when a good muster of members turned up to hear a paper read on the Norwich Plainhead, by Mr. S. Wooton. We also decided to hold a First Feather show for members on June 21st. The following gentlemen were elected members:—Messrs. Bagshaw, Symcox, Walker. HALLAM AND LOVATT, hon. secs.

FALKIRK (Good Intent) C.B.A.

Monthly meeting, held in the Oddfellows' Hall on March 26th, Mr. J. Hunter presiding. The business of the evening was settling classes for first feather show. Letters were read from Messrs. Chalmers and Bald accepting the terms for judging at annual show. A few new members were enrolled. Mr. Jarvie will give a bird-washing exhibition at next meeting.—W. CLUBB, Sec.

WEST LONDON F.A.

Monthly meeting held April 7th, Bush Hotel. Business included the election of annual show judges. The secretary read a letter from Mr. Robson regretting he would be unable to judge on any Wednesday during November. Letters were read from Messrs. Attridge, Crisp, and Maxwell. It was carried unanimously that Messrs. Crisp's and Maxwell's kind offers to judge the Canary and British bird classes respectively be accepted. The delegates of the London Federation having given their report, the chairman called on Mr. Tyson to give a lecture on Crests. This he gave, and on resuming his seat he was kept busy answering questions for upwards of one hour; these he answered to the satisfaction of all. A hearty vote of thanks to the lecturer and to the chairman brought a most cheerful evening to a close. Will all members kindly note that Mr. A. Silver is giving us a lecture on May 5th? All members, fanciers, and friends are warmly invited.—J. DEWHURST, Hon. Sec.

CHESTER C.B.F.A.

Monthly meeting held on 5th April, at Nag's Head Cocoa House, Mr. Bracegirdle presiding. A good number of members and friends were present to hear Mr. S. Hadwin (Liverpool), who gave a lecture entitled "Pairing up and general management." The lecturer dealt with the subject in a very masterly manner, and held the attention of all until the end. When Mr. Hadwin had finished he was subjected to a volley of questions, to all of which he gave a clear and convincing answer. The lecture, questions and answers were of great benefit, and doubtless many of the "tips" given will be put into operation. A vote of thanks, proposed by Mr. Stovin and seconded by Mr. Richards, was carried unanimously, to which Mr. Hadwin responded. A letter was read from the Cage Bird Union, asking for the vote of the society for the offices of president and secretary. A communication was received referring to the Preston and Flowers case, and asking for the support of the members. Three new members were elected, and this terminated a very successful meeting.—J. SWINDLEY, sec.

BORDER CITY (CARLISLE) O.S.

The quarterly general meeting was held at Headquarters on April 6th. There was only a fair attendance of members. Mr. Holmes took the chair. Correspondence was next read over. The judges, Messrs. J. Robson, H. W. Battye (Huddersfield), and W. Nicholson (Stockton-on-Tees), were accepted to judge our open show on Oct. 26th and 27th, as per arrangements by the committee. Letters from the N.B.B. M. and F.B. Club was read, and medals won by our members (Messrs. G. Davidson, T. Holmes, and J. C. Bell), were presented by Mr. T. J. Robson. A long discussion took place re a letter from a member, and secretary was instructed to reply to same. Two new members were proposed and accepted. A rough draft of open show schedule was drawn up and left in the hands of the committee to properly formulate. Re allocation of silver cup presented by the secretary to the Society: it was proposed and seconded that same be awarded to members for most points at open show. Society's first ramble will take place on April 24th, leaving Headquarters at 1.30 p.m. for Dalston district, under the guidance of "Rambler."—JOHN C. BELL, hon. sec.

LEYTON AND DISTRICT C.B.S.

Monthly meeting held at Headquarters, April 4th, about 60 members and friends being present; Mr. J. S. Clarke in the chair. Mr. Allen Silver gave a very interesting lecture, the subject being "Bird-cages." Mr. Silver emphasised the fact that a great many birds were badly caged, and considered that this drew the attention of people who were prejudiced against bird-keeping. He also gave several reports of recent meeting organised with the object of putting down bird-keeping. He did not suppose that anyone present would keep a bird badly caged, but there were a great many persons who kept just a pet bird or two, and almost invariably in cages unsuited to them. He appealed to all present to advise such persons whenever they came across them, as to the right kind of cages. The merits or otherwise of various cages were discussed at length. A hearty vote of thanks was accorded Mr. Silver, to which he suitably replied, and the usual vote of thanks to the chair brought a most enjoyable evening to a close.—FORSE AND SON, hon. secs.

POPLAR AND DISTRICT C.B.S.

Annual general meeting held on April 7th. Various notices of motion were brought up for discussion and accepted. The balance-sheet as presented was also accepted, and passed as read. The usual votes of thanks and compliments were passed to the retiring officers and committee. At this juncture the chairman announced that it was his pleasant duty to present, on behalf of a large proportion of the members of the society, a souvenir in the shape of a gold medal to the secretary for services rendered. The subscription list for this souvenir was started by our esteemed friend, Mr. P. Wyatt, and subscribed to very generously by the majority of the members. The secretary, in acknowledging the present, thanked all for their kind thought, and stated that the success of the society was solely due to the generous support he had received from the many members. There was also another very interesting presentation, proposed by Mr. Barber, to our worthy chairman, Mr. T. G. Hunt, in the shape of a handsome umbrella. Many present spoke highly of the services rendered by the chairman, and congratulated him on again being elected to the same position. Mr. Hunt, in acknowledging the present, stated that it was really not necessary, as he felt honoured to hold the position he did, and all that he did was done purely out of his love for the work. He said he very much appreciated the spirit which prompted the gift, and thanked one and all for it. The result of the voting for officers and committee for the ensuing year was as follows:—Mr. T. G. Hunt, chairman and treasurer; Mr. P. Wyatt vice-chairman; Messrs. Priseman and Braithwaite, auditors; Mr. H. W. Cook, hon. sec.; committee, Messrs. Cowles, Thomasson, Priseman, Kidman, Plumb, Braithwaite, Wyatt, and Barber. Before concluding the meeting the chairman announced that he had received intimation from Mr. H. W Cook that he intended presenting the society with a cup for the best unflighted Norwich for the annual show, to be won three times, not necessarily in succession. This cup to be of the same value as the Yorkshire Cup already in the club's possession. The chairman, Mr. T. G. Hunt, also announced that he would have pleasure in presenting a cup for best Mule or Hybrid. This also is to be won three times, not necessarily in succession. Further, it was also decided unanimously that the secretary be instructed to buy a cup from the cup funds of the society of equal value, for best in the British bird section of the annual show, to be won three times, not necessarily in succession. Dealers will be debarred from competing for this cup. The society has now five cups for competition at the annual show.—H. W. COOK, Hon. Sec.

STRATHBOGIE C.B., &c., ASSOC.

Usual monthly meeting held in the Temperance Hall on April 7th, Mr. J. Wilson (president) in the chair. There was a record attendance. Date of show fixed for December 22nd. Committees were then chosen to deal with the different sections of exhibits and draw up classes, also to suggest judges to be appointed at a committee meeting to be held April 21st. The meeting, which lasted for two hours, closed with a vote of thanks to the chairman.—S. DENISON, Sec.

LANCASHIRE C.A.

We had a very good meeting at Oldham on April 16th, when the following gentlemen were elected members: Messrs. Fuller, G. Lowe, and G. Thurling. In view of a scheme other than medals, I ask all our members to suggest something and send same to me not later than the end of the month. We had a very good discussion on the scheme. After thanking the landlord for the use of the room, we brought the meeting to a close. Standard cages can be got from Mr. J. Hampshire, 7, Cowper-street, Oldham.—C. WHITEHEAD, Hon. Sec.

CAGE BIRD UNION.—DISTRICT 3.

Meeting of delegates of District No. 3 C.B.U. was held at the Rochdale O.C. Club on April 9th. Mr. Smith (Littleborough) was appointed president, and Mr. Naden (Rochdale) secretary. The following proposition were carried:—"That this meeting of delegates have great pleasure in recording a vote of confidence in the Executive Council of the C.B.U."; "That Union members be not allowed to judge non-Union shows"; "That members of the C.B.U. be not allowed to show at the Palace Show unless a license be granted by the C.B.U. to the said show"; "That the yearly meetings of delegates of the C.B.U. be held alternately at a show in the South, Midlands, and the North." Delegates were also appointed to attend the Union shows in the district.—JOHN NADEN, District Secretary, 13, Royds-street, Rochdale.

CAGE BIRD UNION.—DISTRICT 4.

Meeting of District Committee No. 4 was held on April 16th, at the Old Boar's Head Hotel, Manchester, Mr. Lythgoe in the chair. After reading the letter and agenda from the Union secretary, it was proposed and seconded that Mr. Lythgoe be elected chairman of the District Committee for the year, and Mr. T. Atkinson, district secretary. Various delegates were appointed to attend shows. A resolution was carried that these delegates should report themselves to the secretary of the show, and be in attendance at least an hour before its close to receive any complaints, and also should make a report to the District Committee as to the conduct of each show attended. It was agreed to recommend the Council that it be notified in the show rules that appointed delegates are not required to pay any deposit when making objections. It was also recommended that the Council reduce the associate fee from 2s. 6d. to 1s. And that Rule 22 should be extended to debar non-members of the Union from exhibiting at Union shows. It was resolved "That in the opinion of this meeting the Executive Council should call a special meeting of delegates, under Rule 8, to discuss the Palace agenda, and that the societies that have withdrawn should be asked to attend, and their reasons for withdrawal be discussed with a view to their being met, if possible." A further resolution was carried, "That this meeting feels that a Union is absolutely necessary in the Fancy, and that every society in the country should be members; that the societies that have intimated their withdrawal having by that means made the greatest possible protest, do now reconsider their decisions and rejoin the Union." It was also carried, "That this meeting have every confidence in the utility of the Union for the general well-being of the Fancy, and that a report of the meeting be published in the Press." A further recommendation to the Council was agreed to, that more publicity should be given to the affairs of the Union in the Fancy Press. A vote of thanks to the chairman closed the meeting.—GEO. W. F. LYTHGOE.

CITY AND SUBURBAN A.C.B.

Meeting held at headquarters, the Church Institute, 60, Paddington-street, on March 14th, when, for the first time after his long illness, Mr. A. C. Burn occupied the chair; he received an enthusiastic welcome. Messrs. J. W. Ayres, P. H. Harris, G. E. Weston, E. Clements, and J. Abrams were nominated for membership. Prize money and special prizes won at the recent Finch show were awarded. The result of the judging competition was announced as follows:—Champion, insufficient competition; amateur, G. Menheunett and A. W. Hart, 9 points; novice, B. Thrower and F. Wyse, 12 points. The two ties not being covered by the existing rules, it was agreed that a draw should take place, resulting in a win for A. W. Hart and F. Wyse. The chairman then presented medals to B. Thrower, W. Shepherd, and W. Sanders for the best staged cages and birds in the recent cage bird staging competition, and to Messrs. A. W. Hart and F. Wyse for the judging competition at same. A vote of thanks was accorded the Finch show stewards, and to Miss Rose Shephard for providing lunch and tea. The popularity of Mr. C. Prior was once more evinced when an enthusiastic vote of thanks was accorded him for judging the recent Finch show. An illustrated diploma, presented by the L.C.B.A. as 4th prize in the recent U.K.C.C., was on view, the secretary asking permission for the same to be mounted and framed for the purpose of hanging up during the progress of the various shows. The chairman then introduced Mr. J. Robson to give his lecture, entitled, "Success in the Breeding Room." Before proceeding, Mr. Robson referred very gracefully to the chairman's recent illness. At the close of the lecture questions were asked by Messrs. R. L. Crisp, A. W. Curtis, J. Chard, W. Prance, J. Warwick, F. Lathlieff, W. Shepherd, A. W. Hart, and T. Monger. A vote of thanks, moved by the chairman, seconded by A. W. Curtis, and supported by Messrs. R. L. Crisp and C. Prior, was heartily given to Mr. Robson for his extremely interesting and instructive lecture.—V. WINN, Hon. Sec.

SHIELDS AND DISTRICT C.B.S.

Monthly meeting held at Lockhart's Cafe, King street, April 6th, Mr. Thompson in the chair. Four new members were proposed and accepted, making eight in one month, which shows we are still holding our own. Next we discussed whether we should have an open show or not for 1910. It was decided to hold a members' show only. The next business was re the Cage Bird Union—whether we should remain members or resign. After a little discussion it was decided that seeing we are only holding a members' show this year, we withdraw for the present. Next year may result in more satisfaction among the Northern societies re the rules of C.B.U. and other matters, when we may again join.—JAS. BARRASS, Sec.

ARDWICK AND DISTRICT C.B.S.

Meeting held April 5th, at the Onward Hall. Owing to our president being unable to attend, Mr. Boothman took the chair; there was a good attendance. The election of four new members took place. Mr. R. B. Fryer (Manchester) gave us a lecture on the most popular of our British birds, describing the various colours and markings of each species. He dealt with the feeding, steadying, selection, and general management of them, also the moulting them out for exhibition. This he considered a fine art, and it would be well worth their while if more of our members took up the keeping of British birds. He contended that they were one of the greatest attractions of our present shows. Having occupied an hour and a quarter this brought out a host of questions, which the lecturer answered in a very straightforward manner. The meeting closed, but not before we had shown our appreciation of the lecture. One and all thought it an enjoyable evening, and benefited by the able and instructive lecture. Mr. Fryer responded.—J. SPENCER, Hon. Sec.

LANCASHIRE AND LIZARD F.A.

Special general meeting held at the Old Boar's Head on April 9th. A good number of members turned up. Mr. J. Garner took the chair, and presided in his usual businesslike manner. The minutes and balance-sheet being passed, the election of officers was gone into. Result: President, Mr. J. Garner; vice-presidents, Messrs. J. Vickers, J. Hampshire, W. Adams, and E. Fuller; treasurer, Mr. J. Swalwell; committee, Messrs. J. Dewsnap, W. Lawton, J. Lee, W. Lee, J. Compston, A. Bosworth, E. Bosworth, W. Bacon, W. Ridgard, B. Salway, J. Oldham, A. Martin, W. Dewsnap, J. H. Senior, E. T. Turner, A. Wellings, W. P. Barnes, J. Dickinson, A. Hordern, A. Goodall, and J. J. Brooks; hon. sec., John Rukin, 44, Hall Carr-road, Rawtenstall. A lengthy debate then ensued in regard to the challenge cups to be replaced, and it was unanimously decided to try a different method in the future in regard to same, and a special meeting will probably be called to finally consider details. I am pleased to say that we keep making new members, Messrs. E. T. Turner (Rochdale), J. Laycock (Colne), and C. Bosworth (Rushden) being made members. Messrs. N. Stansfield and S. R. Compston were proposed members, all being highly delighted in welcoming Mr. Compston once again to his old love. The following were proposed to act as judges for the L. and L.F.A., viz.: Messrs. J. Garner, J. Swalwell, W. P. Barnes, E. Fuller, S. R. Compston, and A. Wellings. Auditors, Messrs. J. Oldham and B. Salway. It was decided to have a tea and social in connection with the presenting of the challenge cups and medals on May 7th, at the Wellington Hotel, Kingston Brow, Hyde. All members are invited to attend, and as many friends as they care to bring with them; more particulars later. The following have subscribed to the Lancashire Cup Fund:—Mr. J. Garner, 3s. 6d.; Mr. Vickers, 5s.; Mr. Dickenson, 2s. 6d.; Mr. J. J. Brookes, 2s. 6d.; Mr. J. Oldham, 5s.; Mr. J. Swalwell, 5s.; Mr. A. Wellings, 5s.; Mr. J. Rukin, 5s.; Mrs. J. Rukin, 2s. 6d.; Mr. W. Adams, 2s. 6d.; Mrs. A. Bosworth, 2s. 6d.; Mr. B. Salway, 2s. 6d.; Mr. Ridgard, 2s. 6d.; and Mr. E. Fuller, 5s.; total, £2 13s. A hearty vote of thanks to the chairman and auditors brought the meeting to a close.—J. RUKIN, Hon. Sec.

NORTHERN YORKSHIRE C.C.

Meeting held at Lockhart's Cafe, 65, Grainger Street, Newcastle; Mr. J. Curry in chair. Correspondence re patronage was read from Messrs. Douglas, Harver, and Stewart. Its consideration was deferred until we allot patronage. The first table show for young birds was fixed for June 8th; judge, Mr. Eliwood. The secretary was instructed to invite subscriptions towards a special for most points over the young bird table shows. The following gentlemen were admitted members:—Messrs. Coomber (Jesmond), and Milne (Jesmond). The thanks of the meeting were given to Mr. Hutler for providing the plinth for challenge cup. The secretary then gave an address on "Our Ideal," taking the points in the Y.C.C. standard one by one. After this a hearty discussion was entered into, chiefly centering round position and the various methods of steadying the birds, practically everyone taking part in it. A vote of thanks was then given to the secretary for the address. After this the chairman announced that there was another item which the secretary had forgotten to put on the agenda, and on behalf of the members and friends of the club asked Mr. Shepherd to present the secretary with a gold-mounted umbrella and an illuminated address. Mr. Shepherd said that he felt highly honoured in being chosen to make this presentation, which had been subscribed to not only by members of the N.Y.C.C., but by other friends also; the address read as follows:—"The members of the Northern Yorkshire Canary Club wish to place on record their high appreciation of the valuable services rendered by their hon. secretary, Mr. T. C. Crawhall, and hope he may enjoy good health and be long spared to continue in the office he so ably fills. For the committee, John Curry, James Shepherd, J. Ernest Atkinson, Roberts, Tindale. The secretary, in accepting the address and umbrella, said he had often read of people having their breath taken away, but he certainly had experienced that sensation. The gift had come as a surprise to him, and he felt very proud that they had so honoured him though he little deserved it. Whatever he had done for the club it had always been a pleasure to do. It was his hope and desire that the best Yorkshires in the kingdom should be in the hands of the club's members, and though young in years, he was sure that the members had birds of which they ought to feel very proud. Anything that he could do in the future he would be as pleased to do for them as in the past. He sincerely thanked them all. The chairman called on Mr. Currah, the chairman of Newcastle C.B.S., to say a few words, after which the members adjourned to their homes.—T. C. CRAWHALL, hon. sec.

OUR SPRING NUMBER.

A Splendid Double Issue.

MIND YOU ADVERTISE IN IT.

JUDGES OF CAGE BIRDS

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

Secretaries desirous of "guaranteeing" a Show should apply for proper guarantee form to our Manager.

A reduction will be made for a Series of not less than Nine Weeks.

CAGE BIRDS, 154, FLEET STREET, LONDON.

One of the best-known makers of marking rings for Canaries and other cage-birds is Mr. A. C. Hughes (of Hampton Hill, Middlesex). His rings for the 1910 season are beautifully finished—there are no rough edges—and the figures on them are particularly plain, and so arranged that the date cannot possibly be mistaken for the pedigree number. They are made of aluminium (feather weight) and non-corrosive. Mr. Hughes states that the best time for putting on the rings is the 7th or 8th day. Do not put the rings on too early, or the hen, when clearing the nest (which is their custom up to the 7th or 8th day) may notice the ring, and in trying to remove it throw the young birds out of the nest. A good plan is to give the birds plenty of white nesting material, as by that means the rings do not show up so plainly.

Mr. H. Wagstaff, "The Gentleman's Complete Outfitter" (58, King's Road, London, S.W.), does an extraordinary large trade through the post. "What is good business?" asks Mr. Wagstaff. "It is the ability to supply customers with goods of better value than your competitors—good quality, but at a cheap price—to treat your customers in such a manner that they will return to you again." Mr. Wagstaff has thousands of testimonials testifying to the excellence of the goods he sends out. Everything and anything appertaining to wearing apparel may be had from him, from a collar stud to an overcoat. Mr. Wagstaff guarantees to please or else returns money in full. His catalogue fully describing all his goods may be had free on application by mentioning CAGE BIRDS when writing for it.

Twitterings.

I have been appointed secretary to the Boness and Dis. F.A.—THOS. CAMERON, 7, Ash Terrace, Grangepans, Scotland.

I have removed from Broomwood Road, Clapham Common, to 61, Lavender Hill, Clapham Junction, writes Mr. G. E. Slade.

Our next show is fixed for November 8th and 9th, writes Mr. Percival Harris, hon. secretary, Barnstaple C.B., etc., Association.

Kindly notify that I am removing from Stafford Street to 47, Winifred Road, Stockport, writes Mr. W. Stafford, hon. secretary of the Stockport B.F.A.

The Illustrated Idea, No. 400, published in our last issue, was sent by Mr. Thomas Burns, of 30, Hammond Street, Newcastle, and not Mr. J. Burns, as stated.

Mr. H. W. Battye will judge our First Feather show to be held on June 25th, writes Mr. A. H. Meadowcroft, hon. secretary of the Heywood and Dis. O.S.

In our last club report, writes Mr. W. Reid, hon. secretary Sunderland C.B.A., the name of Dr. O'Neal was inadvertently omitted from the list of vice-presidents.

The First Feather show of the Stockport B.F.A. will be held on June 30th and July 1st, writes Mr. W. Stafford, hon. secretary. Mr. W. Bowyer will judge.

Kindly note that I have removed from Tamworth, writes Mr. J. Hollingshead; my address is now The Square, Fazeley. I have opened a shop here in the boot-making business.

Will fanciers kindly note my change of address from Lytton Road, Clarendon Park, Leicester, to 16, Hulton Street, Moss Side, Manchester, writes Mr. John Needham.

I have been appointed secretary in place of Mr. Parratt, of the Hebden Bridge and Calder Valley O.S., writes Mr. O. Greenwood, and my address is 29, Wood End, Hebden Bridge.

The cage bird, etc., show of the Ebbw Vale F. and F.S. will be held on November 30th next, when it is hoped fanciers will give their continued support to this well-known fixture.

Will Mr. A. Trever who replied to an advertisement of mine in CAGE BIRDS, but omitted to give his address, kindly communicate same to me? writes Mr. T. Robinson (Annfield Plain).

I have removed to more central premises, where business will be carried on as usual at 137, Copperas Hill, Liverpool, writes Mr. S. Hadwin, late 20, Pembroke Place, Liverpool.

Will societies in Fife and Kinross wishing the patronage of the Fife and Kinross Norwich P.C. write to me stating the number of classes and the judge? writes Mr. A. Dickson, the secretary.

We have received for inspection a large batch of testimonials from Mr. H. Lewis (Hulton Road, Handsworth), which he has had sent him by delighted buyers of his Budgerigars, etc., advertised in our pages.

I have sold all my surplus Lizard pairs, also the odd cock, both 1908 and '9 birds, and only have eight hens (1909) left, which shows the Lizard Fancy is making great progress, writes Mr. W. P. Barnes (Grantham).

Our First Feather show will be held on July 2nd, in the Rochdale O.C. rooms. A debate on "What an Ideal Club should be," will be opened on April 24th, at 7 p.m., by Mr. R. Blincoe.—J. BUTTERWORTH, secretary, Rochdale O.C.

Ramsden's Pure Peppers for 1910 are of wonderful quality and colour. The pick of the harvest has been secured. Full guarantee as usual when sold in my canisters only. No guarantee to peppers sold loose by traders.—(ADVT.)

The Oldham and Dis. C.B.S., writes Mr. F. Steeple, the hon. secretary, have decided to hold their First Feather show on June 18th, at headquarters. Mr. E. Fitton (Oldham) will judge. He is best known as Teddy Fitton, "one of the old school."

Our young stock show, writes Mr. A. T. Riddles, hon. secretary of the Brighton C.B.A., is fixed for June 29th. Will Mr. Baker, of Over Street, Brighton, kindly forward to me at 29, Inwood Crescent, Brighton, his full address, as I have mislaid it?

Hawick O.S. will hold their open show on December 3rd. Exhibitors will no doubt be glad to hear that the Border Fancy contest will be held at Hawick. With a good classification for Norwich, Mules, and British birds, we are looking forward for a big entry.—H. AMOS, hon. secretary.

We have secured the following gentlemen as judges for our open show at Berwick-on-Tweed on November 24th next, write Messrs. Smart and Gray, hon. secretaries of the Berwick-on-Tweed C.B., etc., Society. Messrs. J. F. Dewar (Edinburgh) and H. Bennet (Kelso) will judge the cage birds.

The Bournemouth and Dis. Cage Bird Association's book of rules, etc., for 1910, includes a capital programme of events, among which are several papers and discussions on specific subjects. The secretary, Mr. W. O. Brooke, "Hopeville," 102, Norfolk Road, Bournemouth, will be pleased to hear from prospective members.

The quarterly balance-sheet of the City and Suburban A.C.B. (sent us by the hon. secretary, Mr. V. Wynn) shows the splendid cash balance of £28 4s. 8d., an increase of £4 5s. 8d. over the last total. The headway which this society continues to make must be most pleasing to the officials. The above result is despite a loss of £1 17s. 9d. on the recent British and Foreign Bird Show.

We have engaged the services of Mr. J. Dobson as judge for this year's show on November 24th, writes Mr. A. W. Ludlow, hon. secretary of the Stamford and Dis. F.A. We are also securing the same hall that we had last year for our show, which we consider a most comfortable room for the purpose. We should like to see at least 400 exhibits, but we could stage 500 nicely. The Fancy is only in its infancy hereabouts, but there have been a lot of new fanciers this last year, and we should profit very much from this new source.

We have received samples of the two kinds of aluminium Canary marking rings supplied by Mr. Geo. B. Leciair, of 24, Lambton Road, Hornsey Rise, London, viz., with and without flanges. The rims are perfectly rounded and smooth, and the rings themselves are very neat and light, without being flimsy. The simplest way of adjusting the rings is to draw them down the stem of a button-hook until opened to the desired size, place them on the bird's leg and gently press until both ends or flanges meet. The fact that leading fanciers have used these rings for years, is in itself sufficient proof of their reliability.

Our membership, writes Mr. J. H. de Maillet, hon. secretary of the City of Birmingham C.B.S., is now on the increase, and we have arranged to hold table shows for young birds in June, July, and August, with free admission to the hall, a young stock show in October, and an open show on November 30th and December 1st. Mr. Roe will be one of the judges for the last-named event, and we hope to break last year's record. Bird lovers will be giving a lift to the Fancy in Birmingham by joining our society and helping to promote an even better show than last year. We all wish CAGE BIRDS the success it so richly deserves.

OUR LITERARY COMPETITION.

Full Results Next Week.

The task of weighing the merits of the many articles sent in for our recent Literary Competition has now come to a conclusion, and the full results will be announced in our Spring Special Number of next week.

We have just received the year-book and balance-sheet for 1909-10 of the National British Bird and Mule Club, which proves that excellent work was done during the past year by this specialist club on behalf of exhibitors in the Hybrid and British bird sections at our shows, no less than £11 18s. 6d. being expended upon medals for the members. The accounts show the highly satisfactory sum of £12 10s. 6d. (cash) in hand, and total assets (cups, etc.), £26 18s. 3d., so that the Club is on a perfectly sound financial basis, a fact which reflects much credit upon the hon. treasurer, Mr. T. R. Trower, and the hon. secretaries, Messrs. Plumbridge and Carr (2, Broad Street Station, London, E.C.), who will be glad to hear from fanciers desirous of becoming members.

NEXT WEEK: OUR SPECIAL

SPRING NUMBER

OUR Special Spring Double Number will prove of exceptional interest, and contain a marvellous budget of topical and practical articles. It will be lavishly illustrated and contain

A most charming and novel Coloured Plate, and a particularly attractive Art Supplement.

The coloured plate, we anticipate, will be very popular as a subject for framing. Be sure you get it

2D. Place an order at once with your newsagent and make sure of getting this Grand Double Number. 2D.

TO ADVERTISERS:

Our Spring Special Number is always a wonderful business getter, and probably the finest issue of the whole year in which to **announce what Stock you have for Disposal.** Sales are certain, for in the Spring buyers are many and eager.

All announcements MUST reach us by Tuesday's post, April 26th, at latest. Be in time—You cannot afford to miss this opportunity.

THE PUBLISHER, "CAGE BIRDS," 154, Fleet Street, London, E.C.

A remarkable list of foreign orders which have been executed since January 1st last has been submitted to us by the world-renowned fanciers' specialist, Mr. W. Rudd, of Norwich. It includes goods to the United States (two lots), Canada (three lots), Rangoon (two lots), Trinidad (two lots), Barbadoes, India and Spain, and birds to Sweden, Rangoon (two lots), Jamaica, United States (two lots), and Canada (two lots). This list well evidences the extensive nature of Mr. Rudd's trading operations.

The annual open show of the City and County of Perth O.S., writes Mr. Jas. Kerr, the hon. secretary, is fixed to be held on December 10th next, when the following gentlemen will judge: Messrs. T. Merrilees (Broughty Ferry) for Scotch Fancies; J. Young (Rutherglen) for Crests and Crestbreds; A. McFarlane (Glasgow) for Norwich; J. Stevenson (Kirkmuir) for Border Fancies; and R. V. Raine (Cathcart) for British and foreign birds. The club show has been fixed for October 22nd, with Mr. Gollan Hislop (Stirling) as judge.

A picture of the Blue-billed Weaver-Bird, painted in Mr. W. Goodchild's inimitable manner, graces the April number of "Bird Notes"—the journal of the Foreign Bird Club. The species is written about by Mr. E. Hopkinson. The Editor writes on "The Aviaries and Birds at Benham Valence." Mr. W. H. Browning, of New York, on "My Aviary and its Inmates," and Mr. A. Sutcliffe on "A Holiday in the West Indies." Mr. Henry Gray, M.R.C.V.S., contributes some notes on "Tuberculosis in Birds," and Mr. J. Frostick has something more to say on the Dartford Warbler in captivity. There is also much other interesting matter.

In sending us a copy of the Dulwich and Peckham C.B.S.'s book of rules and the programme for 1910 (which is very admirably got up), Mr. W. Hodson, the hon. secretary, writes: I am pleased to inform you that the society is making steady progress. We are electing new members at every meeting, no less than 16 having been elected within the last few weeks. A spirit of great enthusiasm exists. Our meetings are well attended, and our members' shows are proving decidedly successful. The committee are not forgetting the social welfare of the society. Concerts and various other interesting items are being arranged, to which our lady friends are very specially invited. Everything possible is being done to make 1910 the most successful year in the society's history.

The Burton-on-Trent C.B.S. have been very busy these last few weeks, bringing to a close their draw, which has brought the grand sum of £10 to their purse, write Messrs. Elliott and Wood, the secretaries. This is a handsome reward for the energy of its members, all of whom gave prizes to make up the draw, no outsider being asked to give anything. It has been decided to buy a challenge bowl for the members, the rules for which will be finally settled at next meeting. New members are invited, anyone being eligible for election within eight miles' radius. The meetings will be found very interesting, table shows and lectures playing a prominent part.

Cage Bird Union.

The result of the voting is as follows:—President, Mr. W. A. Bladon 25 votes, Lord Decies 12; secretary, Mr. G. W. F. Lythgoe 15. Forty-three papers were returned, of which five were unsigned, and one too late.—E. C. LEWER, scrutineer.

The Yorkshire Union of C.B.S.

A meeting of the Council will be held on April 23rd (this Saturday) at the Market Tavern, Godwin Street, Bradford. Time 5.30. Business: Election of sub-committee, members' subscriptions, and other important business. All new delegates please attend.—H. HILL, secretary, 15, Settle Terrace, Thornton Lane, Little Horton, Bradford.

The National Green-marked Y.C.

The annual general meeting of the National Green Marked Yorkshire C.C. will be held on Saturday (April 23rd), at 3 p.m. (previous to Yorkshire Union meeting), at the Market Tavern, Bradford. Business very important: Minutes; election of officers for 1910; balance-sheet; classification for next show season; reports, etc. The following gentlemen have been nominated: President, Mr. W. H. Shackleton; vice-presidents, Messrs. T. Ogden, H. W. Walsh, and F. Townsend; committee, ten inside Yorkshire and five outside Yorkshire, Messrs. H. W. Walsh, F. Townsend, T. Ogden, F. Hammond, H. Hill, S. Dean, W. Crabtree, R. Halliday, W. A. Cowgill, J. Wilcock, H. J. Chittenden, H. H. Towers, T. C. Crowhall, A. Hirst, J. W. Ramsden, J. Currie, A. Ambler, F. Hodgson, S. Unigh, L. Briggs, and W. Firth; hon. secretary and treasurer, Mr. F. Armstrong, 78, Pear Street, Parkinson Lane, Halifax. All members are earnestly requested to attend.—F. ARMSTRONG, secretary.

SHOW DATES FIXED.

To secure insertion in this column, a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.

CLUB & SOCIETY NOTICES

One notice of any forthcoming Society meeting inserted free. It should reach us not later than Tuesday morning's post. Specially printed Club Notice Postcards may be had free on application to our Manager. Secretaries should always use them.

Border City (Carlisle) O.S.—Apr. 24, Headquarters, First ramble of the season, 1.30. prompt for Dalston district.—J. C. Bell.

Brighouse C.B.S.—Apr. 26, Wellington Inn, 8. Final arrangements for ramble.—F. Mitchell.

Barnsley C.B.S.—Apr. 30, Clarence Hotel, 7.30. Selection of judges for open show, etc.; please attend.—F. C. Sims.

Bankfoot C.B.S.—Apr. 26, Bankfoot Schools, 8. Terms, etc., regarding trip.—F. Gelder.

Bournemouth C.B.A.—Apr. 22, Headquarters, 8. To decide on place for holding annual show; discussion on rearing and feeding young birds.—W. G. Brooke.

Barrington and Choppington S.C.—Apr. 23, Headquarters, 7. Club rules, etc.—W. Woollett.

Bonnyrigg C.B.S.—Apr. 30, Forrester's Arms, 7.30. —G. Harper.

Choppington C.B.S.—Apr., 23, Railway Hotel, 7. Classification, etc.—G. H. Seely.

City and Suburban A.C.B.—Apr. 25, Church Institute, 60, Paddington Street, Marylebone, W., 8.15. Lecture by Mr. W. T. Page, F.Z.S., entitled "Insectivorous or Fruit-Eating Foreign Birds"; interested visitors especially welcomed.—V. Wynn.

City of Bradford O.S.—Apr. 23, Flying Dutchman Hotel, 8.—F. Rhodes.

Crewe O.S.—Apr. 26, Earl of Chester Hotel.—T. L. Hancocks.

Coventry Godiva C.B.S.—Apr. 25, Chequers Hotel, 8.30. Table show, A.V. Brit. Hardbill; two prizes. —W. H. Bray.

Derby C.B.S.—Apr. 30, Derwent Hotel, 7. New rules, shall be pleased to see any intending new members; subscription, 2s. per year; 1s. nomination fee. —W. Stevens.

Darlington C.B.S.—Apr. 27, Half Moon Inn, 8.—Hy. Todd.

Grimsby O.S.—Apr. 28, Slatter's Rooms, Freeman Street, 8. To settle whether we have an open show this year or not, and also as to the C.B.U. whether we continue membership.—Moore and Harding.

Green C.A.—Apr. 28, Oldham Hall, Oldham Street, Liverpool, 8. Lecture by J. S. Clinch, Esq., "Mendelism as applied to the Green and Cinnamon"; letter re taking in the Borders.—G. Green.

Glasgow—Queen's Park C.B.S.—Apr. 29, Marie Stuart Halls, Crosshill, 8. Rules to be revised.—R. Heggie.

Greenwich and Deptford C.B.S.—Apr. 28, Cecil Rooms, Woolwich Road, 8.—Hamer and Putner.

Gt. Horton Good Intent.—Apr. 30, Church Schools, Southfield Lane, 7.30. Delegates' report of special Yorks. Union meeting.—H. Clubb.

Huddersfield O.S.—Apr. 25, Methodist Schoolroom, 8. Closing of guarantees for members, F.F. show, June 18, etc.—R. Greensmith.

Highgate C.B.S.—Apr. 28, Spencer Hall, Dartmouth Park Hill, 8.30. Lecture on British Birds, by Mr. A. Silver, 7.45 sharp; committee meeting to arrange Flych show, etc.—C. W. Law.

Houghton-le-Spring C.B.S.—Apr. 23, White Lion, 7.30. F.F. show business.—R. H. Dixon.

Heywood O.S.—Apr. 26, Rechabite Hall, Pine Street, 7.30. Cup rules, also F.F. show business.—A. H. Meadowcroft.

Leigh C.B.S.—Apr. 27, Railway Hotel, 7.45. Paper will be read by Mr. J. Cavanagh on the Yorkshire Canary.—P. Hart.

Leicester C.B.S.—Apr. 27, Saracen's Head Hotel, Market Place, 8.15. General discussion on difficulties (and how to overcome them) that occur during the breeding season, led by Mr. Stevens; fanciers invited.—J. A. Tyler.

Morpeth C.B.S.—Apr. 29, Temperance Hotel, 7.30.—E. Cowling.

Midland Roller C.C.—Apr. 28, Swan and Peacock, Wolverhampton, 8. Paper by Mr. Harper (Bilston), on his method of breeding Rollers. Fanciers interested invited.—J. H. Willows.

Morley C.B.S.—Apr. 23, Sycamore Hotel, 7.30. Suggested nomination of birds before show day, etc.—A. Gledhill.

Musselburgh O.S.—Apr. 30, 83, High Street, 7. Booking of hens, etc.—W. Nisbet.

Northern B.B.M. and F.B.C.—Apr. 27, 65, Grainger Street, Newcastle, 7.30. Club patronage and table show. Judge, Mr. J. R. Slack; classes, Goldfinch or Bullfinch; Siskin, Redpoll, or Twite; pairs for Hyb. Breeding; A.S. For.—J. Bertram.

National B.B. and M.C.—Apr. 28, Feathers, Gt. Chapel Street, Westminster, 8. General business.—Plumbridge and Carr.

North Manchester C.B.S.—Apr. 26, St. Stephen's Schools, Conran Street, Harpurhey, 8.—J. Davey.

Oldham C.B.S.—Apr. 26, Textile Dining Rooms, 8. Classification for F.F. show, etc.—F. Steeple.

Pendleton and Salford O.S.—Apr. 25, Chapel Street Hall, Salford, 8. Resignation of secretary and nomination of successor, etc.—H. Clayton.

Queen's Park C.B.A.—Apr. 28, Emmanuel Hall, Harrow Road, W., 8. Egg food preparing competition, visitors cordially invited.—J. C. Birch.

Rochdale Good Intent C.B.S.—Apr. 27, Temperance Club, 8. Committee meeting, very urgent, ramble, show, etc.—W. Adams.

Rochdale O.C.—Apr. 25, Club, 8.30. Committee meeting, also town hall; accounts.—J. Butterworth.

Sunderland C.B.A.—Apr. 30, Fawcett Street Cafe, 8. Arrangements for table show, etc.—W. Reid.

Stockport B.F.A.—Apr. 26, Boar's Head Hotel, 8. —W. Stafford.

Selston F.S.—Apr. 23, School, 7. To arrange committee, etc., business.—F. Maltby.

West Stanley C.B.S. — Apr. 23, Com. Hotel, 7. Classes for Nest Feather Show.—W. Elliott.

Warrington C.B.S.—Apr. 28, Blue Bell, Sale Rooms, 8.—C. Dukes.

Yorkshire Union of C.B.S.—Apr. 23, Market Tavern, Godwin Street, Bradford, 5.30. Election of sub-committee; members' subscriptions, etc. All new delegates please attend.—H. Hill.

Nests of birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

ON SALE APRIL 30th. The First Part of the Standard Work—

"OUR CANARIES."

By CLAUDE ST. JOHN, with C. A. HOUSE and G. E. WESTON as Associate Editors, assisted by numerous well-known breeders of the different varieties of Canaries.

Published in Monthly Parts, SIXPENCE EACH.

This work, which is utterly unlike anything that has ever been published, is designed in such a manner that it will form a standard work which no breeder or keeper of any variety of Canary can afford to miss.

It is eminently authoritative and always intensely practical, and while being well illustrated it is not a work of pictures only. Each part will contain 2 Coloured and 2 Art Plates by that champion Canary artist, **Mr. H. NORMAN**, and every plate will depict a **STANDARD BIRD** in every respect.

So complete is the scope of this work that the reader with but one bird will find it as absorbingly interesting as the exhibitor with an aviary or bird room.

PART 1. READY APRIL 30th, CONTAINS TWO SUPERB COLOURED PLATES: ONE DEPICTING THE ORIGINAL WILD CANARY AND ALL THE DIFFERENT DOMESTICATED VARIETIES OF THE CANARY, AND THE OTHER OF A TYPICAL YORKSHIRE CANARY.

Order your copy at once from your newsagent, or fill in the Order Form below and we will send you one packed flat in cardboard for **6d. Postal Order.**

Have you purchased **PART ONE of the Standard Work on Hybrids? IT IS NOW READY, and is Selling fast!**

"CAGE BIRD HYBRIDS"

By CHARLES HOULTON, Associate Editors of the work: G. E. Weston and C. A. House

Published in 8 Monthly Parts - - SIXPENCE EACH.

Two Coloured and Two Art Plates with each Part.

This is not a work whose excellence begins and ends with the superficial attractions of good paper and plenty of half-tone illustrations, but is a standard work, written by an acknowledged expert, and prepared for publication by experts.

It has been designed not from the standpoint of attracting the pence of the general public, but as a soberly authoritative and carefully practical work embodying in the simplest and most straightforward language all that there is to be known on this peculiarly difficult and scientific subject.

There are no less than sixteen coloured plates. **EACH PLATE IS A PERFECT STUDY OF AN INDIVIDUAL HYBRID**—not a pretty group suitable for a children's picture-book, but a plate that shows the correct colour, the correct shape, the present-day type and general characteristics of modern hybrids.

The successful fancier is nothing if not practical, and to achieve success in hybrid breeding it is necessary, above all things, to be practical. The practical man wants a practical book, not a picture book.

It will, we feel sure be generally conceded that CAGE BIRDS has produced in

"Cage Bird Hybrids,"

a dignified book on a difficult subject—a standard work of the highest merit and a fitting monument of the hybrid breeder's art.

PART I. IS NOW ON SALE CONTAINING TWO MAGNIFICENT COLOURED PLATES—THE GREENFINCH BULLFINCH AND THE LINNET BULLFINCH—AT MOST OF THE LEADING BOOKSTALLS AND NEWSAGENTS, OR WE CAN SEND IT TO YOU PACKED FLAT IN CARDBOARD POST FREE FOR 6d. P.O.

FOR 4s. PREPAID WE WILL TAKE ORDERS TO SUPPLY THE COMPLETE WORK (IN PARTS AS PUBLISHED). FILL UP THE ORDER FORM BELOW AND SEND WITH REMITTANCE AT ONCE.

ORDER FORM. £ s. d.

Please send me Part One of * Complete Work "Cage Bird Hybrids" Part One of "Our Canaries" for which I enclose the sum of - - - -

FROM COUNTER TO AVIARY ATTENDANT.

A Well-known Exhibitor and the Wealthy Banker's 42 Aviaries.

Last week we published a paragraph which announced the fact that Mr. O. Millsum, the well-known exhibitor of foreign birds (of Swindon), was departing for the Continent to take charge of 42 aviaries devoted to birds. From the "Evening News" we cull the following further particulars:—

Mr. Millsum has built up a large and successful business, but in the intervals he has been a keen student of foreign birds. As the result, he has scored some sensational victories on the show bench and has attracted the attention of fanciers both at home and abroad.

A short time ago he was consulted by a wealthy Brussels banker, who contemplated erecting the largest series of private aviaries in the world. The outcome of the matter was that the Swindon draper was offered the sole management at a big salary. He accepted it, and is proceeding to his new post almost at once.

"My friends cannot understand it," Mr. Millsum remarked to the representative of the paper. "They seem to think I am doing rather an uncommon thing in giving up a successful business for something apparently not tangible in the commercial sense. But personally I think I am to be envied. I am one of the few individuals who are able through a fortunate circumstance to get out of the rut of his humdrum life and grasp their ideals. I have a passion for birds, for nature, and the open air. When I go to Brussels I shall live on a beautiful country estate and have entire charge of forty-two aviaries of rare birds. My family and myself will be placed in healthy surroundings, and what has been to me a delightful hobby in the past will become my chief interest and occupation in the future."

In the course of further conversation Mr. Millsum said he had always been a fancier in a small way, but it was only in recent years that he had taken up bird culture on a big scale. He made Canaries his study, but found there was not sufficient variety in it to suit him. Soon after he came to Swindon the doctor said he must have a hobby or he would have a breakdown in health. Following his natural bent, he began to stock foreign birds, his first purchase being a pair of Love-birds which cost him seven-and-six.

"I joined the Foreign Bird Club and the Avicultural Society," Mr. Millsum went on, "and by this means got into touch with kindred spirits. I read all there was to read on my pet subject and made a careful study of my own collection. The greatest difficulty in bringing birds from the Tropics to this country is, of course, acclimatisation. But the great art is the feeding. I think I have got as near to perfection in artificial feeding as anyone else, and I have invented several foods which have been taken up by practical fanciers.

"I am taking the whole of my birds, including some which have never been seen in Europe before, to Brussels with me. It has been a long process getting the birds together. I have had agents on the look-out at the English ports, and also on the Continent, and it has sometimes been necessary to buy up a whole collection to get a rare specimen."

THE POULTRY WORLD.

The up-to-date, efficient poultry journal. Every number grandly illustrated and full of practical articles by experts. Invaluable for the beginner and the amateur.

EVERY FRIDAY. ONE PENNY.

MANY ATTRACTIVE SPECIAL NUMBERS

Advertisement Forms and all information from

POULTRY WORLD,
154, Fleet St., London, E.C.

Questions and Answers.

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following Conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaints written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence, otherwise their letters will not receive attention. All the fees received from this source will be handed over in full to the "Referee's" Poor Children's Dinner Fund (London).*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Canaries.—**Claude St. John.** British Birds, Mules and Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c., Parkand Lake Aviculture—**Frank Finn,** B.A., F.Z.S. M.B.O.U., &c. Wild Bird Life—**H. Norman.**

NOTE.—*If an answer is required concerning the proper mating, etc. of Norwich, Yorkshires, Crests, Cinnamons, Greens, Borders, Lizards, Scotch or any other variety of the Canary family, we shall, should the querist desire us to do so, be pleased to submit his question for answer to some leading specialist of the day on the variety concerned.*

CANARY QUERIES.

Answered by CLAUDE ST. JOHN.

Singing whilst Breeding.

Breeding Rollers ("Sheffield").—There is but one breed of Roller—the terms Seifert, Glucke, etc., refer to strains and not breeds, and these are now trade descriptions more than anything else. (2) Get a very fair singing cock, quite good enough to learn on, for 20s. Of course, there are better, but until you have gained a little experience this quality would probably give you greater satisfaction than more expensive birds. (3) Many birds, but not all, stop singing when mated for breeding, but they resume their song after breeding is over, or after moulting. There is a certain amount of risk of their picking up bad notes whilst breeding, and adding them to their song, but the risk is no more than most ordinary singing birds are exposed to regularly. If the cock keeps in song whilst breeding, and resumes again quickly after moulting, it is quite possible for him to impart to the young cocks all the tuition they require. Our manager could get you "Profitable Canary Breeding," for 9½d., which would suit you.

Value of Quarantine.

H. Lewis (Cheltenham).—You do not seem to have kept the hen you bought in quarantine at all before mating her, and I am afraid you are now suffering from neglect of this very necessary precaution. It is not possible to say definitely what was the cause of the deaths without having a post-mortem, but the indications all point very strongly to the hen being a source of infection. You should remove her and the cage she occupies, and all its fittings quite away from all your other stock, and keep her absolutely isolated for the remainder of this season. Thoroughly disinfect the cage from time to time as indicated in the article in CAGE BIRDS ANNUAL, and never allow any droppings to accumulate in it. Feed on a nourishing diet of seeds, with a regular supply of green food or fruit, a little dry crushed biscuit, and now and again a scrap of bread and milk, giving no more of the latter than will soon be cleared up. Avoid soft pappy foods of all kinds, as much as possible. I would not advise you to breed with the hen, and it may be best to test her when you think she is quite safe, by putting a common waster of some kind with her to see if it becomes infected. If they remain together for a fortnight without result there should be no further danger. If, however, the test bird becomes ill and dies, by all means have a post-mortem to quite settle the matter.

Concerning Norwich.

M. L. James.—(1) Am afraid this hen is in a bad way. I wish you had mentioned whether she was kept in the same cage—the brass one—as the cock had previously died in. If she has not shuffled off the coils of mortality, keep her in a wood box cage, in a comfortable temperature, rather on the warm side than otherwise, but quite free from draughts. Give plain Canary seed only as staple diet, with a small piece of bread soaked in cold milk, drained, sprinkled with soft sugar and maw seed daily. Give a spray of chickweed daily. Limit the diet strictly to this for a week, and in the next week add only half a teaspoonful of rape every second day. In the drinking water give a pinch of Epsom salts for two days only. Report progress at end of fortnight. (2) See that this bird also is quite free from draughts and damp. Feed on a mixture of three parts canary to one part rape as staple. Give half a teaspoonful of crushed sponge cake, with four drops of sherry and two of cod liver oil emulsion mixed in it, and sprinkled with gold of pleasure seed every second day, and on the alternate days a small teaspoonful of hemp. In the drinking water give a crystal of sulphate of iron the size of a hemp seed, and four drops of tincture of gentian every second day until the moulting ceases. It would be quite useless to mate him until the moult is stopped. (3) Try to discover the cause of these attacks. It may be occasional draughts from some source, or too vigorous cold bathing in cold, wet weather. Remove the cause, and give twenty drops of whiskey, ten of glycerine, and two of eucalyptus oil well shaken together for a day or two in the water. (4) You may use the mixed sawdust just the same as pure pine wood sawdust. It will serve practically every purpose quite as well. From now until the moult is about to commence, however, sawdust should be avoided, as sand is much preferable for the cage floors during the breeding season.

The First Round.

"Sloper."—I have no doubt the sudden snap of cold recently was the chief cause, as the eggs would be almost, if not quite, contemporaneous in growth with the cold. The cocks also may not be quite so forward as you thought they were. Allow the hens that have all clear eggs to sit a week or ten days then remove the nests, and let them come forward again naturally and begin afresh. You may also make a complete fertile clutch with the three fertiles in one nest and the one in another, and treat one hen the same as the others. As to which hen you allow to go on sitting, you must be guided by your own knowledge of the hens. If one is a known good parent, and will take care of the young then entrust the eggs to her in preference to an untried, or an unreliable, hen. After removing the nests give the birds a pinch of Epsom salts for one day, and begin to feed them up again the same as you did for the first round. They should require no other treatment, as the weather will now be getting more mild and equable, and its effect will doubtless be seen in greater fertility in the next round of nests.

Young Birds Dying.

A. G. Cant.—Several replies have appeared recently which would have met your needs to a great extent. You made a mistake yourself in mating the birds a great deal too soon, or you could not have had two nests from them yet, and your feeding is not correct. Do not use the white of the egg for the first three days after hatching, and dilute the egg food with about an equal bulk of the food you name, afterwards gradually increasing the proportion of the latter to two parts to one of egg. You must remember that these foods are supposed to contain a fairly high proportion of egg used in manufacture. You would probably do better by discarding prepared food, and using good wholesome stale bread, or crushed plain biscuits, to mix with the egg. On the third or fourth day after hatching begin to give green food in small quantities, fresh two or three times a day—preferably chickweed, groundsel, watercress, or lettuce. About the tenth or twelfth day give a little hemp daily. Let the staple seed diet all through remain at three parts canary to one part summer rape. Stop the flax altogether. If there are large broods, or hens show signs of flagging about the twelfth day, you may also add a little soaked rape in a separate vessel, but see that it does not become sour in the warm weather.

Off Song and Noisy Breathing.

G.S.E.—(1) Treat the same as advised to "Best Luck," but instead of giving only the hemp alternately with the sponge cake, give a small teaspoonful of a mixture of two parts hemp, and one part each of linseed, teazle, and black rape. You might also, with beneficial results, give a mealworm each day, if available, for a time. Just crush the head, and fasten worm on to end of perch with a pin. (2) Remove the hen to a cosy place, not necessarily very warm, which is quite free from draughts, damp, or great fluctuations, and see that she is not exposed to the influence of burning lights in the evenings. At the same time let it be a well-ventilated position. In addition to your present staple seed diet, give a piece of bread about the size of a hazel nut soaked in cold milk, drained, sprinkled with soft sugar, and a pinch of gold of pleasure seed, every second day for a fortnight, and on the alternate days give a good spray of chickweed, or groundsel, or two leaves of dandelion. Give preference to the first-named, but do not limit the bird to the one variety continually. In the drinking water give a pinch of Epsom salts, and six drops of lemon juice for two days, and after that give ten drops of glycerine, and five each of oxymel of squills, paregoric, and ipecacuanha wine, every second day for a fortnight, then miss a week, and give it again, if needed, for another fortnight.

A Crest Duet.

Spring Bok.—(1) There is no real necessity to interfere with the grooming of the bird's crest during the breeding season. It is much better to leave such matters alone, and avoid as much as possible any unnecessary disturbance of breeding birds. Wait until after next moult, and then if the Crest still shows a tendency to curl upward after it has moulted out, and the feathers are quite full grown, catch the bird each day, slightly moisten the crest with a camel-hair brush, such as is found in a small box of water-colours, dipped in fairly warm water, then take a tiny pad of soft silk and gently stroke the feathers down in the direction you wish them to lie, warming the pad from time to time, and continuing stroking until the crest seems fairly dry. Then get a small camel-hair brush which is dry, warm it, and finish off the crest with that, gently brushing the feathers down in the proper direction. Continue this for a few days until the feathers retain the desired position. (2) See that there is no damp in the position occupied by this bird when the weather is wet. You might change it to a little warmer or drier position permanently, or, any way, do so when we get spells of cold, wet weather. You might also vary its diet during these attacks by dropping out first one kind of seed and then another until you find which seed, if any, disagrees with it at these times, and limit the quantity of that seed to a small amount in future. Such a bird is scarcely a fit subject for perpetuating the race.

Sore Feet and Not Singing.

Mrs. A. H. Clarke.—(1) Keep the cage floor and perches as clean as possible, and strew the floor well with pine sawdust instead of gritty sand until the feet are well, giving a little grit now and again in one corner of the cage. Catch the bird and soak its legs and feet (better, perhaps, do one at a time) in tolerably hot water, but not hot enough to give any sense of scalding. After soaking for a few minutes carefully press off the coarse scales with the thumb nail, or a trimmed match stick. Use no force; if they do not come away readily, soak them a little longer. Avoid making them bleed. When scales are removed, bathe for few moments in a warm solution of boracic acid, dry gently, and anoint with boracic ointment. Repeat anointing daily for few days. You may add a pinch of Epsom salts and six drops of lemon juice to water for two days, and give a spray of chickweed daily. (2) This seems to refer to a former question which I do not remember, and cannot trace reply. Feed on a mixture of three parts canary to one part summer rape as staple. Twice a week give half a teaspoonful of a mixture of equal parts hemp, inga, black rape, and teazle, and on two other days a piece of bread the size of a hazel nut soaked in cold milk, drained, and sprinkled with soft sugar and a pinch of maw. Give a spray of chickweed, or a leaf of dandelion, daily, and allow the bird to bathe two or three times a week in mild weather. See that it is free from draughts, and great extremes of heat and cold. In the drinking water give a pinch of Epsom salts and six drops of lemon juice for two days, and afterwards twenty drops of whiskey, six of glycerine, and as much chlorate of potash as will cover a threepenny-piece every second day for a week or fortnight as may seem necessary. You should satisfy yourself that the sex is right.

Not Breeding.

S.A.—In the first place you paired them too early, and probably long before there was any sign at all of their beginning to get forward in condition, and in the next place your feeding does not seem to be sufficiently generous. If they have made no forward progress when this appears, separate them at once. See that the place where they are kept is nice and bright, well ventilated, but quite free from draughts, damp, or extreme fluctuations. Feed on a mixture of three parts canary to one part summer rape as a staple. Every second day give a small teaspoonful of egg-food with a pinch of a mixture of equal parts gold of pleasure and sesame seed mixed with it. You may vary this item occasionally with an equivalent amount of bread and milk, sprinkled with soft sugar. On the alternate days give half a teaspoonful of a mixture of equal parts hemp, inga, linseed, black rape, and teazle. Every day give two fair-sized dandelion leaves. All these quantities are for each bird individually, and not to be shared amongst the lot. In the drinking water give six drops of syrup of buckthorn for two days, and afterwards six drops of tincture of gentian and four of aromatic sulphuric acid for a day or two. After a fortnight on this treatment you may try mating them again when they seem to be ready, but it is quite useless putting them together until they show signs of readiness.

Brevities.

Bald Canary (Wylde Green).—Many thanks for letter. Very pleased to hear treatment has been so successful.

Question of Fertility (Curious).—If the cock is removed from the hen after the first egg is laid, it does not necessarily follow that the eggs she lays afterwards will be unfertile. It is, of course, quite possible that this may be the case; but with a healthy, vigorous hen in high breeding condition, I should expect to find at least the two eggs laid on the two days following the removal of the cock fertile, and in some cases the whole clutch laid would be fertile.

Always Moulting (W. N. Stephenson).—See the cage is not hung where it can receive a direct current of air from doors or windows, or where it is exposed to the heat of a fire by day, or burning lights in the evenings. Continue your present staple diet, and three times a week for the next month, give half a teaspoonful of crushed sponge cake, with four drops of sherry and two of cod liver oil emulsion well mixed in it. If the latter is not available, give a mealworm each day as a substitute. On the alternate days give a few grains of hemp, and a morsel of ripe banana. Give a spray of chickweed or two leaves of dandelion daily, and allow birds to bathe daily in mild weather. In the drinking water give a crystal of sulphate of iron the size of a split pea, and six drops of diluted sulphuric acid, every second day for a fortnight.

Cause of Clear Eggs (W.H.C.).—The reason you suspect of the eggs being unfertile is a far-fetched and altogether untenable one. It is far more likely that the cock was not in such good breeding condition as you thought he was, and the recent cold snaps probably prevented him filling the eggs. He required a little extra feeding, and the second clutches would in all probability have been more successful in any case. If he is a very heavily-feathered bird, with loose, flowing feather about the flanks, you should trim off the loose ends of the feathers about the flanks and abdomen. Do not disfigure the bird at all. All you need to do is just snip off the loose tips about the surfaces so as to leave the plumage neater and closer in appearance.

Egg-bound Hen (E.E.E., Wisbech).—The treatment of placing the hen over a jug of hot water was correct as far as it went. You should have dropped two drops of warm olive oil or castor oil in the vent from the end of a match stick before placing her over the steam, and have given two drops of a mixture of equal parts brandy and glycerine in the beak. Of the latter mixture you should also have added a small teaspoonful to the drinking water. The bird should have been placed in a small cage on nest near a fire after being steamed, and the oil and steaming process repeated after three or four hours, when the first operation had failed to produce any result. Any mauling operations under the pretence of helping matters are best avoided.

Keeping Birds in Attic (Novice).—You do not mention the size of the attic, which is unfortunate. In any case, you seem to be between two fires—either of which may burn you equally bad, figuratively speaking. If the kitchen is a good-sized one, so that you can keep the birds well away from the fire and burning lights, and yet have them well protected against draughts from doors or windows, I would certainly advise you to leave them where they are in preference to removing them to the attic. In fact, I would only advise the latter course if the space is fairly large, and with the condition that the door could be left open for ventilation at all times without causing draughts. Even then the window seems quite inadequate to make a fairly bright room.

Birds Fainting (A. Wyatt).—As these fits have only begun to occur so recently, and each time you have attended to the cages, I would suggest there may be something new introduced to their notice which is, perhaps, not noticeable to you, but is alarming to the birds. See if you can discover anything in the room, cages, appliances, or even your own dress. The only other cause is nervousness, which may be due to some temporary weakness, their increasing age, or even constipation. The only thing you can do is to pay much attention to them in an unobtrusive and quiet way, and thus try to win their confidence. Never do anything about the cage without having some choice bit of green stuff or other dainty in their view, and ready to leave behind for them, and all the time during the operation keep speaking or "tweeting" to them now and again in a quiet way. If at all costive, give a pinch of Epsom salts in the water for a day or two, and increase the supply of green food.

After the Scrimmage ("Joiner").—I suspect the result you describe is a sore, and not a swelling though you do not say which. Wash it clean with a little very warm water in which you have dissolved boracic acid in the proportion of a teaspoonful to half a teacupful of water. After washing, dry gently, and paint the spot with a feather from a bird's wing or tail dipped in Friar's Balsam. After that just touch the spot daily with the ointment, or with carbolised vaseline. If only the result of the fight, it will probably soon be well. There is no fear of contagion.

Soft Feathers (J.C., Bolton).—You should have said whether the bird is dropping feathers, or in what way you think the soft feathers, as you term them, are abnormal. Feed it on a mixture of three parts canary to one part summer rape as staple. Twice a week for the next month give a morsel of bread and milk sprinkled with soft sugar and a pinch of maw. On two other days give half a teaspoonful of a mixture of hemp, inga, teazle, linseed, and black rape. Give a leaf of dandelion or spray of chickweed daily. In the drinking give a piece of sulphate of soda the size of a split pea, a piece of sulphate of iron half that size, and six drops of dilute sulphuric acid every second day for a week or so. If that does not set matters right, write again and give full particulars.

Puffed-out Roller (Alpha).—The bird has either got a chill or was dropping into moult. If the latter was the case it will be self-evident before this appears. Keep it in a comfortable temperature—not necessarily a high one—but quite free from draughts and sudden fluctuations. Feed on a mixture of two parts canary to one part summer rape as staple. Twice a week give half a teaspoonful of crushed sponge cake, with four drops sherry and two of cod liver oil emulsion well mixed in it, and on two other days a similar quantity of a mixture of hemp, teazle, and black rape. Give a spray of green food daily. Drop the inga and linseed out of the diet, and limit it to above items. In the drinking water give a pinch of Epsom salts and six drops of lemon juice for two days, and afterwards six drops of tincture of gentian and four of aromatic sulphuric acid every second day for a week.

Not Singing (A. Newman).—Although you say the bird has never laid any eggs since you had it when it was quite young I am inclined to think it is a hen. Feed it as advised to "J.C., Bolton," but substitute a pinch of gold of pleasure seed for the maw to sprinkle over the bread and milk, and give the bread and milk and the mixed seeds on each alternate day instead of only twice a week each. After a fortnight of this treatment try mating her with a lusty young cock in full song and breeding condition.

Age for Breeding (Eastney).—Certainly, hens hatched from April to June, 1909, are quite old enough to mate up and fulfil all their duties by now. The egg-binding in the hens in question is a mere coincidence, and has nothing whatever to do with the age of the birds. It is much more likely that the weather was the cause of the trouble. I cannot quite understand your feeding. You first say they were fed previously on plain canary (which, I take it, is the time you had them), yet again you say you fed them on a packet seed. Feed as frequently advised in these replies, and give the hens a rest of a fortnight before mating up again after being egg-bound.

Losing Feathers (Best Luck).—I hope this is not your best luck. Remove the Yorkshire from the hen and cage him by himself in a comfortable position, where he will be free from draughts and chills and extremes of heat and cold. Feed on a mixture of three parts canary to one part summer rape as staple. Every second day give half a teaspoonful of crushed sponge cake with four drops of sherry and two of cod liver emulsion well mixed in it and sprinkled with a pinch of gold of pleasure seed, and on the alternate days give the same quantity of hemp and a morsel of ripe banana. Give a leaf of dandelion daily. In the drinking water give a pinch of Epsom salts for two days, and afterwards six drops of tincture of gentian and four of tincture of steel every second day. Continue the treatment until feathers cease dropping. If the moulting started before eggs were laid, they are probably unfertile. Give the Norwich that are slow a pinch of inga and gold of pleasure on alternate days, and two leaves of dandelion daily.

Canary Querists should send to our publisher for "Canary Breeding for Beginners," 7d.; "House's Canary Manual," 1/2; and "Yorkshire Canaries," 1/-, post free.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S. M.B.N.H.S., etc.

What Parrot?

S. W.—It is a Banded or Moustache Parrakeet, very many of which are noted for fluency of speech. Your bird is evidently a freshly imported bird, and as yet quite wild; consequently when you go to attend to it, it is badly scared and screeches. If it is continually screeching I fear it will be anything but a pleasant pet, and I certainly cannot advise you to keep longer than your period of warranty; if it has not improved by then, I should certainly advise returning it shortly before this period expires. All Parrakeets talk a little, but some take a lot of teaching. You might try covering it up, when it begins to screech, and then remove very quietly, so as not to scare the bird unduly, or you will simply aggravate the trouble. No Parrot will talk while it is so badly scared; they must be tamed first, then the other soon follows.

A Feather Puller.

W. B.—Get a bottle of Spratt's "Pennakura" and anoint any bare places therewith. You make no mention of ripe fruit, the bird should have some daily; if it will not take one kind, try another; most individuals are, however, fond of apple. Seed mixture: Two parts each of Canary and white millet seeds, and one part each of oats, hemp, paddy rice, dari, and sunflower seeds; well mix, and always keep a supply in cage. Crusts of household bread, plain biscuits, and nuts in variety should also be given so as to keep up a varied diet. Do not on any account give tea, coffee, or milk slops, table scraps or any other kind of animal food whatever. Keep a piece of clean cuttlefish continually in the cage, and supply cotton reels and pieces of stick for the bird to cut up and play with. Keep its bowels well moving with occasional doses of Dinneford's magnesia (1 part magnesia to 3 parts water), say, every third day, so long as the voidings are not watery loose; the above to take the place of drinking water on days supplied. When not giving the magnesia, well colour the drinking water with Parrish's chemical food. This feather pulling is very difficult to cure, and much patience is required, as the habit or vice is not easily checked. Report progress after a few weeks of above treatment.

Aviary for Budgerigars.

Mid. Surrey—(1) The roof should slope from back to front, and if it is not more than 8 feet long, I should have the whole of it covered in. The whole of the back, the two ends, and one-third of the front should be boarded in, the remainder of the front being half-inch mesh wire netting. I should advise an earthern floor, well covered with gritty sand. Three-quarter inch matching would suffice, but two thicknesses of half-inch planking with felt between is much more satisfactory, and the extra cost is but little more, while the gain in the form of being damp and draught proof is very great. If you construct as above, there will be no need to board off the shelter from the flight, but if you send me the dimensions of your proposed aviary I could be more definite. (2) It should be safe to put the young out the first or second week in May, unless severe weather should intervene.

In Poor Feather.

M. K. T.—In addition to the large seed mixture, keep a tin of Canary and white millet seed in the cage continually. Every third day for a month the drinking water should consist of one part Dinneford's magnesia and three parts water; on other days well colour the drinking water with Parrish's chemical food. Get a bottle of Spratt's "Pennakura" and anoint the bare patches therewith. Do not give egg, all the other items of diet you name are permissible. It will be the better for a little ripe fruit daily—any kind it will eat. I should advise you to get the following as your large seed mixture: One part each sunflower, oats, maize, hemp, and paddy-rice, the whole to be well mixed together. Nuts in variety should also be given. I should also supply a piece of a branch and cotton reels for is to play with and cut up; also keep a piece of clean cuttlefish hanging in the cage. Continue the above treatment for about a month, and then let me know the result. Let it get all the fresh air possible without draught.

Galah Cockatoo Moulting.

Ignorant.—Repeat your query and inform me how you are feeding and treating the Galah, and I shall be in a position to advise you. In the meantime give the bird a dose of Dinneford's magnesia—one part magnesia to three parts water—this to constitute the drinking water for the one day. To guard against possible parasites, spray the bird twice a week with quassia solution. Re the young Parrot: You might with advantage put eight to ten drops of Parrish's chemical food in the boiled maize daily (note, the boiled maize only keeps fresh one day); the biscuit should be soaked only in water, and merely moistening it is better than saturation. I should also let it have a few sips of water (chill just off) once or twice a day, gradually increasing this to letting it satisfy its thirst two or three times daily. Keep a seed mixture of Canary, millet, and hemp in the cage, and also supply a little ripe fruit. When the bird is eating heartily of the seed mixture, you can supply larger seeds as well, and when it appears to be taking sufficient of this, gradually discontinue the maize, but do not stop the supply suddenly. As it is already fairly steady, it should soon begin to pick up what it bears. It will be quite another two months before you can consider danger from latent infection past, but I should say the prospect of your acclimatising the bird certainly very good.

Brevities.

Another Feather Puller (C. B.).—This vexatious vice is not easy to eradicate once the bird has become confirmed in it, and the treatment must be persevered with as the care is frequently a lengthy process. I can only add to my previous reply that you procure a bottle of Spratt's "Pennakura" and anoint the bare and irritated parts therewith. Keep it where it will get all the fresh air possible without draught.

Mocking Birds (C. H.).—There are some half dozen or more species of Mocking Birds, all of which are of good merit as songsters. The common Mocking Bird (Mimus Polyglottus) is the only one at all freely imported and its song is very fine. The white-banded mocking bird is said to be even a finer songster, but it is very seldom imported, and I do not remember having seen a living specimen of this species. Its principal dietary should be soft food, live insects and ripe fruit.

Australian Parrot Laying Eggs (J. B. B.).—Probably the laying of the eggs has put a strain on the birds system and it is feeling a little out of condition; the only danger is egg-binding and I do not think this is a serious one. Put it on a course of Parrish's Chemical Food. As the brooding fever passes away it will recover its speech. But if you will repeat query, giving me a little of the bird's history and details of your treatment, I may be able to give you a more satisfactory reply.

Breeding Indian Parrakeets (J. H. F.).—About the time this reply appears the eggs should be hatched; but do not be too curious; let your ears do the watching in this respect. I should supply pieces of plain biscuit, and crusts of stale household bread, and I should add to the seed mixture paddy rice, sunflower seed, and oats.

Foreign Bird Queriers will find in our handbook, "Foreign Birds for Beginners," 1/1, and "Budgerigars and Cockatiels," 6d. post free; a mine of information of use and interest.

Supply boiled maize as soon as you hear the hissing of the young, and at this time supply as much ripe fruit and green food as they will eat. These birds have been bred in this country on several occasions. They may be vicious to other birds when nesting and rearing young, but I do not think they will injure their own progeny. The viciousness at this period arises from desire to keep other birds away from their nesting quarters, etc.

About Budgerigars (R. F. Jackson).—There is no need to be discouraged; it is full early yet, in fact, the young will be all the stronger for not being too early hatched. Get a fine spray and spray the birds with quassia solution two or three times. The brood usually varies from 3 to 7. Their next clutch will most probably be duly hatched out. Keep the cage where the birds can get plenty of fresh air without draught. Supply grass in flower (seedling grass) ad. lib., but do not gather it till the sun has cleared off all frost. You would find our booklet "Budgerigars and Cockatoels" (see advert.) very helpful.

Grey Parrot Pulling Feathers, etc. (Imprimatur).—(1) Your diet appears fairly correct, but the bread should only be soaked in water and milk, tea or coffee sops, table scraps or any kind of animal food, must not be given. Give it a dose of Dinneford's magnesia (one part magnesia to three parts water) every third day, so long as the voidings are not watery loose. Anoint the bare parts with Spratt's Pennakura. (2) It is a Banded or Moustache Parrakeet; I should say a young bird, and that the central tail feathers will grow much longer when it next moults.

Young Grey Parrots (T. B.).—There is great risk with these birds, nearly all of which arrive here more or less tainted with disease, which often remains latent for some weeks, and then suddenly and rapidly reaches an acute stage, and the losses are very numerous. If you comply with the rules for a reply per post, I might help you further (see reply to "Ignorant" in this issue); but I cannot name any special dealer; you must consult our columns. It is usually the cheapest way to buy an acclimatised bird, of course, seeing that you get such. Re the guarantee, if you send a copy of this to the Editor he will give you a reply through our Legal column. Hope you will have better luck with the next bird. By the way, your cage should be thoroughly scalded out, every crevice being thoroughly scarched with boiling water before being used again.

Parrot Pulling its Feathers (Phœbe).—Anoint the bare places with Spratt's Pennakura (see advert. cols.). Give a few doses of Dinneford's magnesia (see other replies), and supply ripe fruit daily. Do not on any account give tea, coffee, or milk slops, table scraps, or any kind of animal food whatever.

Silverbills (Novice).—I should leave these birds to themselves, the varying weather has probably had something to do with the unsteady sitting; leave things just as they are for a fortnight, then if they have made no further attempt at incubation put a small Hartz travelling cage (with fittings removed and bar cut away from entrance) at the other end of cage, and do not pry into the nest too much. The next clutch will most probably be duly hatched and reared. Our booklet, "Foreign Birds for Beginners," would help you. (See advert.)

Sexing Java Sparrows, etc. (J. F. T.).—The sexes of this species can only be told by comparison, the beak of the female is narrower and more pointed than that of the male; the difference is most distinct when viewed in profile. There is no difference in plumage. The male is also slightly the larger bird, that is, when you are comparing adult birds. Diet: Canary, white millet, spray millet, and a few oats, greenfood, cuttlefish, grit, and water; and when they are rearing young, a little of some soft food mixture should be given daily.

Weavers and Budgerigars (R. Shears).—Weavers as a rule are well able to look after themselves in any company, and I consider they would be safe with the Budgerigars. The bird you describe is the Madagascar Weaver; it can be kept out of doors all the year round. They will thrive on the same diet you supply to the Budgerigars, with the addition of a couple of mealworms daily to each bird. In the summer you can give any spiders, beetles, smooth caterpillars, etc., you can capture for them.

Birds for C.P. Aviary (Nemo).—The utmost you should keep in such a cage should be 12 Waxbills, or 8 birds of the size of a Canary. You would find the following make a nice series, and should do well if kept out of draught: Pairs each of common and green Avadavats and Zebra Waxbills; males only grey and green singing Finches, Goldfinches, Siskin and Redpoll. You would find "Foreign Birds for Beginners" (see advert.) very helpful. If the above does not fall in with your requirements, please repeat query.

Parrot in Poor Plumage. (Mrs. Day).—There are several replies re feather pulling Parrots, which will fully meet your case. Use Dinneford's magnesia, Parrish's Chemical Food and "Pennakura" as advised in these replies. Confine the bird's dietary to seed mixture, plain biscuits, nuts, and ripe fruit, with cuttlefish and, of course, water. If there should be no improvement in a few weeks, please repeat query with full details.

Breeding Indian Green Parrakeets (Grinston).—Parrakeets are very funny creatures; some individuals of the same species will breed freely with a neighbour, and though your aviary accommodation may be much better, yet in your aviary they do nothing save play about with the husks. I should not say your bird was too old for breeding with, and all you can do is to supply as you have done, logs, etc., and wait patiently for them to set up housekeeping, which they certainly ought to do in your aviary. For dietary, see reply to another querist in this issue. I think, if you persevere with what is called the "well trap," you will clear out the mice. I will send you the account of successful breeding by post.

Blue Grosbeak and Weavers (Thank You).—I am glad the Grosbeak is going on well; try it with ripe fruit, if it will not take one kind try another; but I think you will find it will approve of sweet apple; also let the supply of green food be liberal; other than this I cannot add anything to my previous reply. Many of the Weavers are nearly in full colour, though the process is sometimes checked a little by severe weather.

Birds for Small Aviary (Niol).—I should use the glass shutter in winter; your arrangements are very good. Not more than eighteen birds the size of a Canary. I should suggest 4 Norwich hen Canaries, with a cock each of Goldfinch, Siskin, grey singing Finch, and Linnet, with pairs each of Spice birds, Java Sparrows, Zebra Finches, and Zebra Waxbills. "Foreign Birds for Beginners" (see advert.) would help you. The above series would be varied, and a few interesting hybrids should result as well as young from the pairs.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. Weston.

Hand-Rearing a Nightingale.

Miss P. B.—Your ambition is laudable enough, and the adult Nightingale is not a difficult subject to keep in captivity, but if you know nothing of the hand-rearing of insectivorous birds the Nightingale is not a good subject to make a start with. You ought, for instance, to hand-rear some Thrushes and so gain experience. That young Nightingales can be successfully hand-reared is quite correct. If you mix best quality ants' eggs (freed from all rubbish) with equal parts of stale spouge-cake, or of crushed biscuit (such as maizena wafers), and hard-boiled yolk of egg (beaten up fine), you have a food which will accomplish this. As the youngsters grow, at the time of feeding chop up some mealworms and add to the portion required. The food must be moistened to a sloppy consistency (like cream) with new milk. The food, also, must be always quite sweet and fresh, and now and again a pinch of powdered cuttlefish bone should be stirred amongst it, and now and again give a few drops of warm water (not hot). All the small flies and grubs you can capture, with smooth caterpillars, should also be given. If you can get some live ants' eggs (they are to be bought), use them freely; they will bring you success. Keep the youngsters snug and cosy. For general directions consult one of our handbooks on British Birds. The young birds should be taken when nine or ten days old, and kept in a warm place, especially at night, and scrupulously clean. They are tender mouthed, and care should be exercised not to hurt them when feeding.

A Young Thrush Difficulty.

Exeter Twins.—There is no method by which the sex of Song Thrushes (either young or old) can accurately be told, other than by hearing them sing. The hens are often bigger and stouter in build than the cocks, and that they are as good in colour and markings is evidenced by the fact that some of the finest Song Thrushes ever exhibited on the show bench have been hens. The cocks are generally longer and flatter-looking on head when viewed sideways, and perhaps a shade deeper in brown on the back, while I have heard some fanciers advance the opinion that they generally have a small light patch directly below the under mandible, free from all marking (or pencilling). The one sure test, however, is the song. In taking a youngster out of a nest, I should go for the most forward, best-developed one—such a youngster is usually to be found in every nest (the "top dog"). Young cocks commence to "record" (or try over their song) almost as soon as they commence to perch—you can see the little throats working like the bellows of a concertina as they warble away. The hens will also "record," but not with the gusto of a real cock, nor with the same pulsation of the throat. Hand-reared birds should always have the opportunity of "learning" from the song of a good adult performer. If this is not afforded them they never become really finished vocalists, but sing a medley composed more or less largely of the notes of whatever birds they happen to hear.

Crossbills.

No Name.—That the Crossbill can be dangerous in an aviary is proved by the experience which a certain well-known aviarist has recorded, viz., of a pair which turned his aviary into "a shambles." But I personally know of a case where one cock Crossbill did no harm whatever to the other birds kept with it in an aviary. Whatever you do, keep your eyes on the bird. Your bird may be given for seed, sunflower, hemp, and canary seed; and for animal food three or four mealworms daily, with any other insects you can get. A few berries (haw, privet, black, and so on), also the core and pips of apples, smashed nuts of various kinds (walnuts, crack nuts, etc.), and fruit are relished. Offer him any of the other seeds or seed mixtures in general use now and again; also small maize, dari, wheat and the like. Sometimes he will eat a little, and variety is good. The Crosshill will find amusement, and a supply of food also, in a few fir and pine cones, if you can get them in their season with the seed in. He will also find you some employment in providing him with new perches, etc., for he will use his spare moments in chewing up any woodwork he "fancies." It is good for him, too, to have exercise for his curious and powerful mandibles. You will, I think, find him an amusing and interesting bird to keep in a cage.

British Bird Queriers should purchase our "British Bird Manual," published in two parts, "Hardbills" and "Softbills," price 1/- each, or in cloth cover together, 2/3 post free.

Points about Mule Breeding.

Beginner.—Your friend was quite correct; indeed, I have often stated the same thing in this column. One Goldfinch is certainly capable of attending to two or three wives, and usually "makes no bones" about doing so. Feed up the hens in the usual way (see the numerous articles which have appeared recently in CAGE BIRDS) by giving a little hemp and niger seed occasionally, and a teaspoonful of egg food every second day. Let them also have three or four young, tender dandelion leaves each every day. Let the Goldfinch also have a free supply of dandelion, and feed him generously as regards seeds, not forgetting half-a-teaspoonful of niger daily. When the first hen shows signs of being ready to nest, run the Goldie with her for a few hours daily until the third egg is laid—early morning and the evening are the best times. Then leave her to sitting and rearing duties, and repeat the procedure with hen number two. If both hens show a desire to go to nest at the same time, run him with one in the morning and the other in the evening, reversing things next day—i.e., letting the evening hen (so to speak) be the morning hen. It is quite erroneous to think a Goldfinch (or any other male bird for that matter) must be with his wife always—a few minutes daily will be all-sufficient, providing the hen "calls" to him, and he does his duty in that period. From what you say, I should think your Goldie quite likely to turn out a free breeder. As he is not house-moulted, however, it might be well to carry on the breeding operations in a quiet corner, and to guard against over-interference. In other words, leave him alone as much as possible. As a matter of fact, a black-legged Goldie, unless exceptionally steady, is not the best Finch to try running with more than one hen.

"My Hybrid Couples."

W. T.—All Hybrid couples (two British birds) can be treated on practically similar lines; there is no need, broadly speaking, to feed one pair one way and another pair another way, for this would be a great tax on one's time where many pairs are put up. All couples should have plenty of young dandelion leaves, likewise the flowering and seeding heads of dandelion and groundsel, shepherd's purse and chickweed, according to season. The dandelion and chickweed are obtainable now, and it will not be long before you are able to get shepherd's purse freely. It is to be found even now. Give good feeds of niger and maw seeds to both birds daily, and do not stint the Goldies of hemp nor the Bullie hens of sunflower, while the latter may have a taste of egg food every day if they show any liking for it. My own hens all show a liking for it (they are in cages). Some fanciers believe in transferring the eggs to hen Canaries, and some (but very few) give the hen Britishers a chance to hatch them and rear the young. When the couples are in cages, the former invariably proves the most certain method, especially with hen Bullies, whom I never find any too reliable. Should you get young, offer all of the above-mentioned seeding green foods freely, egg food (or rich insectivorous food, if the hen Bullie likes it), small mealworms, live ants' eggs, and sprays of rose or fruit bushes which are infested with smother fly (aphides). The seeding green food is often obtainable (though later on in the year, in time, however, for most young Hybrids) simply covered with "blight" and tiny crawling things, and is then most valuable.

Bringing up Young Mules.

Novice (Burnley).—All Canary Mules reared by Canary hens are brought up in very much the same way as young Canaries—that is, on similar food and treatment generally. When they are commencing to feed themselves offer (in addition to soft food) maw seed, lightly cracked canary and hemp seeds, groats, or coarse oatmeal, shelled and broken up sunflower seed; also seeding heads of chickweed, shepherd's purse and groundsel; and thistles in season. Don't, at the same time, forget grit and cuttlefish, likewise old, crushed mortar. Steep some summer rape seed in cold water, which thoroughly change every day. It will soon begin to germinate (burst), and is then ready for use, dabbing it as dry as possible in a towel before offering it to the birds. This is very good, especially where anyone experiences difficulty in getting green food regularly, for which it is to a certain extent a substitute. All crushed seed should be prepared fresh daily. I should wean them off egg food as soon as possible, substituting for it home-made egg cake, moistened, if necessary, with a spot or two of milk or of water, or a little stale sponge cake, or crushed sweet biscuit (maizena wafer, tea or Osborne), also moistened with milk. Egg cake made and baked at home really does not need damping. Don't make the mistake, when dropping egg, of leaving off soft food entirely. The best cages for general use are the box pattern ones known as Finch stock cages (any of the large cage makers advertising in our columns will supply them). You could turn the Mules, of course, into small flight cages, about 3 feet or 4 feet long—say double-breeders with centre partition removed. They are apt to be mischievous, and pluck one another, however, when kept in numbers together.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 2, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 21s. Subjects for post mortem examination must be sent packed in a box direct to Mr. Yates, with the fee, this and any accompanying letter being kept from contact with the dead bird. Any bodies sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

I. T. Hough.—Your birds are dying of "Ptomaine Poisoning." See to your feeding utensils; thoroughly scald these, and in the drinking water place a little permanganate of potash, just sufficient to colour it, and administer it fresh daily for a week. If you could furnish me with some information as to the manner in which you feed them I may be able to assist you further.

"**Bohemia.**"—Replied by post.

"**Gouldian.**"—Replied by post.

W. E. G.—I have examined both stained and unstained sections of necrotic patch in bird's lung, but am unable to discover anything beyond dead tissue; nevertheless, I am inclined to think that the disease is brought about by a vegetable parasite. I hope to encounter this affection again, as it is not always easy to demonstrate its presence in a single specimen.

GENERAL.

Answered by the Editor.

An Address (Constant Reader).—The address you require is Mr. Ridge, 25, Matley Street, Battersea, London, S.W.

Letters Received.—(J. R. Hyland, W. Adams, F. Firth, S. Morley.)—We have duly received your letters and the contents shall have our attention.

Sexing Canaries (B.G.H.).—Our Canary specialist will reply to your question for you. The information is given in "Canary Breeding for Beginners," post free, 7d.

Cuttings (A. Minns, C. H. Goodwin, C. K.Eaton, and others).—Many thanks for your kindness.

A Club Notice (A. Hewens).—Your notice of meeting of April 21 did not reach us until Friday the 15th, when our paper was already printed and on sale. Kindly note the heading under "Club and Society Notices."

MANCHESTER & N.COUNTIES O.S.

Lecture on the Cinnamon.

General meeting held at headquarters Deansgate Temperance Hotel, on April 4th, there being a good attendance. After the ordinary business, which included the nomination of a new member, Mr. Bladon, our worthy president, gave us a lecture on "The Cinnamon Canary and Experiments with Cinnamon Blood." The lecturer dealt with the Cinnamon firstly, telling us what was wanted; he referred to the difficulty of keeping up the size, and told how to colour-feed. You must, he said, have a percentage of hot pepper to get the desired amount of colour into Cinnamons. He also dealt with the different ways in which one could breed with Cinnamons, and told us of the different experiments he had tried with them. I think I can say without contradiction that it was one of the best lectures our members have ever listened to.

Amongst the many questions asked were: Why do you prefer a Lancashire to a Norwich, the Cinnamon being Norwich shape?—The Norwich offsprings are not the size you want them; it is better to get a Crestbred all front, nothing behind, and as short in feather as possible. The surest way to get size was a Crestbred hen carefully selected. Are there any such Crestbred hens?—Yes; they can be found, but are of no use to Crest breeders. A Norwich hen won't breed any markings (pencillings). Is it not that they want no markings and all colour?—Judges differ. If you pair a green cock the first cross from Cinnamons back to Cinnamons, does it give them a smoky appearance?—It depends upon the colour of the green; you want a bright green cock bird, not a smoky one; and I think the best greens are bred from Cinnamons. Which do you think is the best way to get good greens?—The surest way is a clear yellow cock, and a pure-bred Cinnamon hen. I tried colour feeding with almost all cold pepper with poor results. What percentage of hot do you use?—Quarter of a pound hot to three-quarters of a pound cold. Would cocks from the first cross paired to Cinnamon hens breed Cinnamons?—Yes. Don't you think a Cinnamon cock would be a good cross with British?—Yes; and I believe it has been used, but I have had nothing to do with Mule breeding. Do you do any double-buffing?—Yes; and it has a tendency to improve colour, and will also increase size. But you must be particular in selecting your birds. Do you do any double-yellowing?—No. Do you think the reason we see more buffs than yellows is on account of double-buffing?—I don't think it has any effect. The meeting then closed with a hearty vote of thanks to Mr. Bladon, several members saying what an interesting lecture it had been, and how they had enjoyed it.—H. Boothman, Hon. Sec.

Correspondence.

Proposed New Society for Portsmouth and District.

SIR,—A meeting has been arranged to be held on Wednesday, April 27, at the Victoria Restaurant, 266, Commercial Road, at 8 p.m., to consider the advisability of forming a cage bird society for Portsmouth and district, when it is hoped that all interested in the welfare of the cage bird Fancy will attend.

W. R. KING,
200, Kingston Road, Portsmouth.

Getting Hand-reared Linnets on to Seed.

SIR,—Last year I successfully reared two nests of Linnets on soaked rape and egg and biscuit. But after they got on seed and could do for themselves they died one by one till I had not one left. I fed them on scalded rape, crushed hemp, teazle, and other wild seeds, but all to no purpose. I should be glad if any reader of CAGE BIRDS would tell me how to stop them dying off, as I intend having another go.

A LINNET FANCIER.

The Railway Company Pays.

Birds Arrive Too Late for Judging.

SIR,—It will no doubt interest the Fancy to know that I have been successful with my claim against the G.W.Rly. Co. for the delay in delivering my four exhibits too late for judging at the last Clapham Show. My claim was 30s., and after a lot of correspondence, they paid me last week 21s. in settlement of same. I should like to thank (through your columns) the secretary of the Clapham Society, Mr. A. C. Askew, for the assistance he has given me over this claim, as without his assistance I do not think my claim would have been paid.

D. A. S. LONGDEN.

Swansea.

A Recipe for Washable Distemper.

SIR,—I enclose a recipe for washable distemper, as it may be the one asked for by a reader of CAGE BIRDS some short time ago. I am a constant reader of your paper, but the recipe was not mine to give away then, but I have since been told I can do what I like with it. Put 6lbs. of size in a pail with a small quantity of water, bring to a boil on the fire. Sprinkle in and well mix 6lbs. of finely crumbled whitening (add 1d. of blue if it is to be white). They must be well mixed together. Fill up the pail with boiling water and stir well. Let stand until set into a jelly, then add 1 teacupful turpentine, and half-teacupful linseed oil. It can be coloured with the ordinary colour powders.

MISS M. LATHAM.

The Type of the Lancashire Canary.

SIR,—I see a letter in this week's CAGE BIRDS to which I think it would be as well if the writer had signed his full name, as everybody in Glossop knows who "Lizard" is. Mr. T. says it is interesting to him to learn that the L. and L.F.A. have appointed a new specialist judge. Well, it may be interesting for him to know that he has insulted the intelligence of the members of the L. and L.F.A., a body of gentlemen that he has not known many weeks, men that have been in the Fancy more years than he has been months. Why, two years ago, "Lizard," you did not know a Lizard from a Sparrow, and as for a Lancashire, it is not three months ago that you were calling my Green Crested birds "Lancashires," and did not know any better until I told you. What bit you do know about the Fancy I have taught you. Now, Mr. T., leave the Lancashire and Lizard to old hands that understand them. You wait your turn, which may come if you stop in the Fancy long enough (which I for one very much doubt, as it is very well known that you only joined the L. and L.F.A. for the purpose of winning the novice medal). Now, "Lizard," from what I know of the new judge, you can leave it to him to deal out justice to one and all alike. I can, too, assure your new-found friend that no matter how he brags about judges not finding his new method of painting, and that they cannot get it off, I can tell him that the newly appointed judge will do it. You will remember he found it on that broken-cap Gold which won at Rochdale Good Intent show, and it did not take him long to do it. You will also remember that he said this was a good bird and did not need any touching up. How is it that the new "dummy" judge could find it, and the well-known judge failed? I think this gives your letter away. But as you are a very young man and new in the Fancy, we will forgive you making such statements in the Press. I may also tell you that your late friend W. has forgiven you, and that we shall be having our annual L. and L.F.A. dinner on April 30th, when you will be able to tell the members what you think of them for electing such a "bad specimen" of a judge.

E. FULLER.

SIR,—In reply to Mr. F. W. Baker, I am not the only "crank," as I well remember being at an L. and L.F.A. meeting many years ago, when Mr. B. was there (at the Wheatsheaf, Oldham), when the late Mr. Stanley Robinson said to me: "Ned Fuller, I'll tell you what I think." I said, "Well?" His reply was that all bird chaps were cranks. I believed him, and any stranger would have thought so had one been there. So I believe you, Mr. B., for I should not have been a bird chap as long as I have if I had not have been "cracked." But I cannot help that. Now, Mr. B., I will not discuss the Lancashire bird with you, knowing you never bred one nor showed one in your life. Re the cash you mention, I may tell you that I have paid all as promised and hold an acknowledgement for the same. But you did not get that £1 for the cup that was won outright by Mr. Garner for the simple reason that it was judged for by some Crest judges. You know what my conditions were. It was to be judged for by a Lancashire judge. You, as a leading member of the L. and L.F.A., broke your promise and voted for a Crest judge. So you did not get the sovereign. You say you are "sitting on the fence." Stop there, Fred, it will be the best place for you, I think, just now, as our champion Lizard breeder (also a few others that are breeding from his bones) has a fine strain that he has made himself, and not bought here, there, and everythere. I may also tell you that I don't think it is any use your coming to Glossop to buy any winners, as the breeders of to-day want them themselves to make a good name, also. Further, the breeder of a lot of your winners (that he sold you and that you were so successful with years ago) has about given up breeding Lizards, having lately got married to a bag of gold and rows of houses, so is at a better game than breeding winners for anyone else, collecting rents and looking after the property and gardening, and feeding poultry, which are better than breeding Lizards. No more bending down looking under the bed, Fred, on coming out of his birdroom, to see if he has any put out of the way to beat you with! You know the old wheeze, Fred, so stick to the perch, old man. But if you should by chance hop off, come to the L. and L.F.A. dinner. I shall be pleased to see you, and then we can have a talk. Or if you care to reply to this, you are at liberty to do so, and say whatever you like, as it will not upset me. You will not injure my character, as I never had one; and you can take it from me that I shall not take it into any court of law whatever you may say or do. But do please leave the Lancashire Canary out of it!

E. FULLER.

A New Cage Bird Society for Oxford and District.

SIR,—At a meeting held on April 11th, it was decided to form a cage bird society for Oxford and district, to be known as the Oxford and District Cage Bird Society. Membership is open to a radius of 30 miles, and the subscription is 2s. 6d. per annum. Mr. J. A. Lees was elected treasurer, and Mr. C. F. Holliday, 58, George Street, Oxford, secretary. During the evening 36 members were enrolled.

C. F. HOLLIDAY, Secretary.

Early Goldfinch-Mule Breeding.

SIR,—It may interest my fellow breeders to know that I have a young Goldfinch-Mule which was born on March 31st, and I am glad to say it is doing fine. Also I have a Sib.-bred hen sitting on three eggs, due to hatch out on April 23rd. This I understand is pretty early for the Goldfinch. Of course he is house-moulted. I bred with him last year and got 24 full eggs off him, but I am sorry to say I only managed to rear 7 young ones. I make all my own egg food. My recipe is: 1 hard-boiled egg chopped fine, 3d. worth of sponge biscuits—mix all together, dry in oven, when it is ready for use. It will keep for any length of time. Just damp it a little before using.

52, LEADENHALL St., (Box 74) LONDON, E.C
AND OF ALL CHEMISTS.

The Yorkshire C.C. of Ireland.

SIR,—I have received a requisition duly signed by six members to hold an extraordinary general meeting of above club (1) to consider the action of an official in not furnishing a balance-sheet for the committee as promised by him some months past; (2) to consider the financial condition of the club and the best means to clear off the small debt due at present. The extraordinary general meeting will be held on Monday, April 25th, 1910, at 5, South Anne Street, off Grafton Street, Dublin. The meeting will start at 8 o'clock sharp, and it is requested that all the members of the club be present. I cannot find time at present to write to every individual member, and hope that all who have the interests of the club at heart will do their best to attend.

J. R. HYLAND, Hon. Sec.
53, Fitzroy Avenue, Drumcondra, Dublin.

Why do Hens Refuse to Feed their Offspring?

SIR,—With reference to Mr. Williams' letter in your valuable paper, can he let me know why Canary hens laying a cluster of eggs will not sit them, and yet others will sit them for a week or so and then leave them? He says in his letter that when the young are due, give the hen a little egg food in the morning and a little bread soaked in milk in the afternoon. Does he not think that the milk will bring the hens on sooner than is needed?

A BREEDER.

SIR,—Several letters have appeared of late relating to the above subject. As a breeder of over 30 years I have had various experiences, and have come to the conclusion that one of the causes, if not the principal one, is that too much use is made of stimulating food. It stands to reason that the birds will forsake their young if they are ready to lay again or eggs are forming. Egg food should be discontinued after the hen has laid her clutch of eggs until the young appear.

OLD BREEDER.

Scandal at Skelmanthorpe.

The Recent Y.U. Suspensions.

SIR,—I should just like to say that I'll gladly pay Mr. L. Dyson his fare on the conditions he mentions, and that I'll also forfeit £1 to the Skelmanthorpe C.B.S. if they can prove me to have made one single statement that is not true. I have given facts all the way through (even the shows and dates where certain birds have been shown), and I am quite prepared to prove them if the Council will allow me. It is a very easy matter to poke fun at these facts, and say that I am not truthful, when at the same time I am speaking the truth. It may seem strange, but it is easier for twelve men to make lies about one man than it is for one man to prove these twelve men out to be untruthful. I'm sorry, Mr. Editor, you are putting a stop to this case so soon, and not even giving me a chance to reply as I should like, for I am sure that I could make all their statements look very bad indeed if I had the opportunity to do so. If the Council of the Yorkshire Union will allow me, I'll send the 5s. as a deposit, and object against any or all the men I have mentioned. I am sure, as Mr. Morley says, that these men are like a lot of hooligans, for one in their ranks even insulted me and offered to fight at Bradford Railway Station the first time we were there about this case. Then he followed me into a carriage and repeatedly insulted me from Bradford to Huddersfield, a distance of about twelve miles. Now, I also have five children, and not one worker among my family, all of whom depend upon my earnings. But I intend proving this matter out if I have to starve through it, for I say that I am speaking the whole truth. I am also writing to Mr. H. Hill, the Y.U. secretary, asking to be allowed to take my proofs before the Council.

HENRY KAYE.

[Seeing that Mr. Kaye has written to Mr. Hill, the Y.U. secretary (whom last week we expressed the opinion was the proper person to lodge any charges with) we think this matter may now very well close so far as our columns are concerned. As Mr. Kaye opened this correspondence, however, we must in fairness publish next week any reply (which must be brief) which other parties to the case may wish to make.—Editor.]

SIR,—I have read several times the "Skelmanthorpe Scandal," and I think it must be a source of unpleasantness to you to have to put these controversies into print, the more so as I think these "cross words" are the only slight blotch that our paper, CAGE BIRDS, has—every word of reading matter always pleasant to go through, until we have to see these sad "Headings." I do not wish to flatter our Editor, but I do think that our paper, CAGE BIRDS, is the best "feathered" journal to be obtained. If I read aright, I think the above matter concerns borrowed birds being shown. I may be entirely wrong by giving my little opinion, but a show is a show, and what does it matter about any exhibitor getting his bird (or animal) from Tom Jones or Oliver Twist, so long as the bird or animal is worthy of the 1st, 2nd, or 3rd prize given by the judge? The credit, of course, then either belongs to the exhibitor or the proper owner, and is not a matter for the show authorities to bother about whatever. But I had better pause at this point, or probably I may be in for a "dressing down." I am a great fancier of the Canary, though not a great lover of exhibiting at shows, yet I am proud to have added many readers to CAGE BIRDS, and of having assisted them into the hobby, of which they themselves have become proud. Some may think the writer may be a novice. However, last season I bred 56 from seven hens, not so bad for a novice. In conclusion, may every breeder, particularly exhibitors, get on the best of terms, so that we may have less cross words to read.

JOHN H. JOWETT.

A Singing Hen Canary: Will She Breed?

SIR,—Probably readers of CAGE BIRDS would be interested to hear that I have a singing hen Canary. She sings exactly like a cock. This bird is a yellow Norwich, three-years old this spring. I have had her for two years, and she has bred twelve fine young ones, besides a nest of nine eggs (two of which she laid in one morning); this is a fact, as I watched her carefully. But, unfortunately none proved fertile. I have often read, and been told also, that a singing hen (one that really sings, not twitters) always proves a bad breeder. Now, my bird only began to really sing this spring. Can any of your readers tell me if this will turn her into a bad breeder this year? At present she is in splendid condition, but does not carry nesting material about like the other hens. I have not mated any of my birds yet, but shall shortly do so. But I do not wish to waste time with her if what people say concerning singing hens is true. Should be glad to hear other fanciers' experiences.

SINGING HEN.

The Early Breeding of Budgerigars.

SIR,—Being rather anxious to get some tame pet Budgerigars ready early, I started breeding earlier than usual this year. All my nests were up before the end of March, and I have paid rather dear for it. The first to nest was my old breeding pair of Cockatiels, from which I bred so many tame youngsters last year. The first egg was laid all right. The following day it was very cold, and the hen could hardly fly, so I brought her into the warm house all night. Being better in the morning, I let her out, and she soon laid the second egg. Following day she was bad again, so I took her in again; but she was worse next morning when she should have laid the third egg. I did all I could for her, but could not get her to lay. She died during the day. First nest of Budgerigars all were dead in shell, or the eggs clear. Second hen died egg bound. Third, Madagascar Lovebird, sat close and well, but no youngsters. Fourth nest, yellow Budgies, still no young. Fifth nest, Budgerigars, all clear eggs. Sixth nest, just hatching out; also seventh. The young of the eighth Madagascar Lovebirds are due this week, and the eggs look promising. Ninth and tenth have still a week to go, and the others are all laying now. The Rosellas have been nesting for weeks now, but do not settle down to laying. I am not altogether a novice in the foreign bird fancy, and I ought to have known better than start so early. Well, I risked it, and have paid dear for it. So perhaps this will be a warning to others who are impatient. I have paired the old cock Cockatiels up again, and they are just nesting. I have also several other pairs put up for breeding, so hope to get some youngsters later on. I have been most unfortunate with hen Cockatiels. This cock bird has now had no less than eight wives in four years. One got killed, one got drowned in the small pond, then, in my large aviary, another escaped. Two others died egg-bound: and so on. I am not breeding many small birds this year, as I cannot spare the room. Since my advt. in CAGE BIRDS ANNUAL I have had to keep a larger stock of birds. My small Finch and Waxbill aviary is therefore used as a stock pen. I get a good number of visitors on Sunday to see my birds. I do not mind showing them my aviaries (in fact, it is a pleasure), but I do object to Sunday trading.

H. LEWIS.

Order To-day, Part I. of "Cage Bird Hybrids," 6d. post free.

The best, most complete, and up-to-date book on Mule and Hybrid breeding.

The Future of the Cage Bird Union.

What is it to be? Some Opinions from Our Readers.

SIR,—"A Delegate" in a letter appearing in your last issue makes certain statements concerning the London and Provincial O.S. and myself as their delegate. Kindly permit me to state that these statements are incorrect in every detail. J. W. RAMSDEN.
(Late Delegate for the L. and P.O.S.)

SIR,—With respect to your editorial note at the end of my letter in your last issue, I would be glad if you would allow me to state that it was *not* my idea that the purport of your article was the "slating" of any particular officials of the C.B.U., neither could any passages in my letter even reasonably be held to suggest it. I quite understood why your article was written, and certainly did not misconstrue it in any sense whatever. However, the fact that you *did* slate certain officials of the C.B.U. is unquestionable, even though *you did so in the matter of duty, and without any intention of hurting anyone's feelings*, and I can only assume that the sole object of your footnote in your last issue was to emphasise that fact, and soothe as much as possible the ruffled feelings of the officials in question, in which case your note was quite irrelevant and entirely out of place at the end of my letter.

W. REID.

[Mr. Reid is quite entitled to come to such conclusions concerning our article as seem to him right; while we are entitled, we think, to dissent from his conclusions if we deem them in any wise incorrect, or expressed in such a way as to lead to the forming by others of conclusions which are not correct. Mr. Reid's latest assumption that with one hand we fed these officials of the C.B.U. with syrup while we smacked them with the other, appeals to us as distinctly humorous; but it is wide of the fact.—Editor.]

SIR,—In case the numerous readers who see Mr. Reid's letter should form an erroneous impression as regards the Newcastle Society, let me say that I believe there is not a single member of the society, of which I hold the great honour of being their secretary, who would not rather suffer suspension *sine die* than carry out the unjust decision of the C.B.U. Executive. It is these decisions, bad in policy as well as in justness, that have alienated the Northern fanciers. I will not trouble your readers with a resume of the case which was discussed at some length in your columns, but would say that when one of the members asked our representative for the number of members who attended the executive meeting, at which it was discussed, he evaded the question, thus giving the impression that it was anything but a full meeting and the decision anything like a universal decision of the whole of the delegates. With regard to my own case, it was immaterial to me what they did so long as I retained the confidence of my fellow fanciers, which was evidenced by their actions at the time, and for which I still sincerely thank them. I have for some time given great thought to the reconstruction of the Union on something like workable lines, but am as much in the dark as I was at the commencement, and neither your article nor all the letters in last week's issue throw any light on the subject. Four years, and nothing done!! Would you have it exist another four? Nay, it committed suicide at the Palace. Leave its remains in peace. T. C. CRAWHALL.

SIR,—I have read your Editorial, and also the able letters of your correspondents in last week's CAGE BIRDS. A great deal of the blame for the falling off of the Cage Bird Union seems to be laid on the shoulders of the Secretary and President. But there are other reasons for this falling off. I don't say that Mr. Raynes makes an ideal secretary, but anyone who knows Mr. Raynes would not question his capabilities. With regard to Mr. Bladon, well, the report of the executive meeting at Nottingham speaks for itself. After declining to stand as President, he was importuned again and again to withdraw his objections, with the result that he consented, I have no doubt reluctantly. You say the general meetings of the Union have been "notorious fiascos." I am sure I don't know. I haven't been to one. However, I will take your word for it. But you blame the President for not strongly asserting himself. Mr. Bladon may be a bit easy-going; he certainly is a gentleman. But there is one thing certain, no body of men such as the delegates of the Cage Bird Union will consent to be ruled by the iron hand (even in a velvet glove) of a bombastic person as president. Perhaps I can give one reason why the meetings are, as you say, fiascos. I don't think that the Crystal Palace Show is an ideal time or place for an annual meeting of that description. Delegates come up from every part of the kingdom on the Saturday of the show ostensibly to attend the annual meeting, but in reality to look at the birds. Is it likely they want to be shut up in an ante-room for the greater part of the day doing dry business relative to the Union? For my part I do not blame them, if they don't. We must not forget that the Palace Show is looked upon by those who are in the habit of attending it as a holiday, it being the wind-up of the season; there is always a certain amount of hilarity and conviviality, particularly among the successful ones, at an annual gathering such as that of the Palace show, and, I repeat, the delegates are in no mood for the musty business of the Union—with the inevitable result. I notice you mention a number of London societies which have seceded. Of course, it only needed one to withdraw for them all to follow. Let us hope they don't regret it. We know the London societies never liked the Union. It wasn't started down south! I once read a statement written over a signature, which shall be nameless, that anyone born to the north of Birmingham was—well, "Non compos mentis." I remember I smiled when reading it, and thought that the writer himself was "a bit balmy." But I am beginning to think that it is the Southerner's opinion of us Northerners generally. I think I am not so far wrong when I say that the Northern aversion to the Union dates from a certain well-known exhibitor's suspension a short time ago. That gentleman was quite fanatically in favour of the Union previous to his suspension, many enthusiastic letters defending the Union appearing over his signature. But because he was suspended for showing at an unlicensed show, like an ordinary novice would be, he must protest against the decision of the Union. Naturally, a well-known Northern society is not going to stand by and see one of their pet members treated like that; so they must secede as a protest. Let us hope they too will not regret it. How many entries did they receive from outside Union members at their last successful show? I notice Mr. Reid, in last week's CAGE BIRDS, is of the opinion that the suspension of the said exhibitor is harsh. He knew very well when he made his entries he was doing wrong; and I think the district committee would have been justified had they given him more. What would the critics have said had they let him off scot-free? Another case which is harder than the Newcastle member's is that of a prominent exhibitor of British birds, who was disqualified for alleged staining. Personally, I honestly think that the exhibitor in question never stained the bird, nor do I think he knew about it. Of course, we know he had only recently bought it. But the bird was exhibited by this gentleman, and justice had to be done. The Cage Bird Union couldn't get at the seller, because he hadn't exhibited it. Doesn't Mr. Reid think this a harder case than the previous one? Still, the C.B.U. did its duty. There is another reason why the Union has declined in favour. I refer to Rule 22. It is a very sore point to members of the Union, and it has caused more unpleasantness and more resignations than anything else relating to the Union. Personally, it doesn't affect me, because the society, having the honour (?) of my membership, isn't affiliated. But I feel for fanciers who are tied down by the rule (Northern insanity), and I have no hesitation in saying that the Union will never be a national success until the rule is made either to allow members to show where they like or (and this I prefer) to prevent any non-member from exhibiting at Union shows. I firmly believe this would have been adopted long ago had it not been for the Palace. Every time it has been mooted Mr. Ramsden has fought with might and main against it, and has actually dominated the meeting. I think the Palace is about the only show which would be hit to any extent; and one way out would be to allow exhibits to come in at the Palace. One way of meeting the non-Union Yorkshire Societies would be, if Rule 22 was altered, to drop what we will call "the private member's fee" from 2s. 6d. to 1s. That is, anyone belonging to a non-Union society who wishes to show at a Union show, could be a member of the Union for the small fee of 1s. annually. I think that would meet the case admirably. With regard to the part of your article which states that the Fancy does not get enough particulars of the Union's meetings, I quite agree. The Fancy "pays the piper," and they have a right to call the tune; and the business of each meeting should be published (with your permission) in extenso. Your suggestion to call a general meeting with the object of removing all causes of dissatisfaction is very practicable. But if you mean by this to give the Yorkshire societies preferential treatment, I don't think it will do. I think they should come in on the same terms as other societies, or leave them to "plough their lonely furrow." The alteration of Rule 22 will bring lots of societies to their senses.

T. JOHNSON.

SIR,—Please state that the Sunderland C.B.A. has definitely decided to withdraw from the Cage Bird Union, as under present circumstances the retention of Rule 22 by the C.B.U. places our members in a rather difficult position; and I might mention that this is the sole reason for our withdrawal.

W. REID, Hon. Sec.

SIR,—As secretary of District No. 12 Cage Bird Union, I would like to make a few remarks. I have always thought, and still think, that a governing body such as C.B.U. would be a benefit to all fanciers, and for this reason I accepted the post of delegate for Wimbledon, and was appointed secretary of district No. 12. I have tried in my humble way to fulfil that post, and do what little I could with the welfare of the Fancy at heart. Had the societies in this district appointed men who intended working for the benefit of the Fancy the result would have been, I am certain, a success. As secretary of this district I have called the delegates to three meetings with this result: first meeting 4 attended, second, 2 attended, third, 2 attended, in each case myself included. I think, Mr. Editor, that you will say with me that the societies affiliated have through their delegates spoilt all chances of bringing about that success which might have been. I am still of the opinion that if those affiliated would only nominate as delegates true fanciers, the C.B.U. would be the success it deserves to be. While writing this, I cannot help recalling to my mind the difference between the delegates of this district and those who attended the Executive Council meeting at Nottingham about a month ago. I felt that every man present tried to do his duty to the C.B.U. for the benefit of the Fancy without personalities or discourtesy. Still hoping the C.B.U. will meet the support it deserves, and then become a benefit to all fanciers,

G. J. WARLEY.

SIR,—Further to my letter of last week, I am sorry that no other suggestion has been made to attain the end advocated in your article. Mr. Reid's letter does not help us at all. As was said last week, the question of Rule 22 has been discussed several times, and as Mr. Hadwin puts it, the bulk of the members favour it. I admit it is onesided. When originally submitted, the rule was never intended to stand as at present; it went further, and as advocated repeatedly since, put non-members on the same footing as members. But, after all, it has been no great hardship to fanciers, since practically every show outside the Yorkshire Union has been under Cage Bird Union rules, has been consequently open to its members, and in time would have embraced all. Had the Yorkshire Union accepted the Union's overtures and an arrangement come to, complaints against this rule would not have been heard of. Then, again, without the rule would *any* of the mixed shows have taken out a license? No! And these are just the shows which cause the most trouble by their treatment of exhibits and exhibitors. The Union would forfeit the only means they have of bringing these up to the scratch, besides losing a good source of income. There are just two points in Mr. Reid's letter which I think need putting straight. First, he says Mr. Crawhall made his mistake unwittingly. No doubt he did when making his entries, but, if I remember rightly, at the district committee meeting which suspended him, he admitted that after making the entries he found, or was told, he was going against the rules, but still he sent his exhibits. I sympathise very much with Mr. Crawhall in view of the fact that similar offences have not been dealt with. The other point is in reference to the decision against the Newcastle Society. Mr. Reid states that the Council did nothing to enforce the decision. I have written the secretary of the Union, and he tells me he informed Newcastle that their show could not be held under Union rules until they conformed to the Council's ruling. This ruling they could not accept, and so resigned, forestalling the Council in any action they might have taken under Rule 21, by suspending themselves. Now, this opens up the question of loyalty to the Union. Here is a good society, apparently favourable to the Union, with its delegate on the Council, but as soon as ever they get a decision adverse to them they resign. Right or wrong, they ought to have accepted the Council's decision after once submitting their case to them. I also asked Mr. Raynes how many societies of the list you gave had notified him of their withdrawal. Five, he said, and the only one to state any reason is Newcastle, as given above. Now, all the seceding societies put the Executive in a very awkward position. However willing they may have been to remove all causes of dissatisfaction, without this knowledge how can they do it?

A DELEGATE.

SIR,—At the meeting of the Oldham and Dist. C.B.S. on Tuesday, April 12th, it was decided to withdraw our membership from the Cage Bird Union, as our members were of the opinion that the said Union was of no benefit to them as it is at present constituted. I trust you will give this small note publicity.

F. STEEPLE, Hon. Sec.

SIR,—I say amen twice over respecting your article *re* the Cage Bird Union. You have diagnosed the disease in unmistakable fashion. Now, where are the men to see that the strong tonic is taken as prescribed, and the capable nurses—or shall we call them physical developors?—of the up-to-date C.B.U.? They can be found, every one of them. The men for the hour are always to hand when wanted in the hour of need. This would be a queer world if it were not so. How many of our greatest business firms of to-day have not, at some time in their career, had to face a crisis? What have they done? Shut up the shop and put a padlock on the door, and said it is all up, we have blundered, let the things all go, and we will quit? No, they get together and confer as to the cause of the failure. When the cause is found, out of these very failures springs success. Let us do likewise; probe the thing to the bottom. Let our leading fanciers come together and work the matter out, and frame rules for one supreme authority for the whole of Great Britain. It can be done in such a manner that the Yorkshire Union, and all other unions and specialist societies, can join together for mutual good and help. That would be strength, indeed, and many much needed reforms would soon be effected. The foundation is there all right, assets in the bank, and the general office "fit-up" of the Union. Who will help to lick it into shape? It means collar work; but that won't hurt. It means grit, but it will help to make you grittier still. Who will back the effort up? My spade is at the service of the cause.

W. DOWNING.

Does the Roller Canary Need Smartening in Appearance?

SIR,—I am very glad to see the discussion which is taking place on this subject. Some seven or eight years ago I tried the crosses of Roller and Border, as I was very anxious to improve my Rollers; in fact, the object I had in view was to get a good yellow four-pointed Roller, one which would be as good a songster as the Roller. I tried for two or three years. I did certainly improve the colour of the Roller, but I could not get the even marked; neither could I get so good a singer as the pure Roller at the same time. I also tried the Norwich cross—the brightest yellow I could get of the Norwich breed paired to the yellow of the Rollers. The next year I crossed back to the Rollers. This cross did not produce any better than the Borders, but the colour was improved as I stuck to the double yellowing for some three years or so. It also improved their stamina, as I had to inbreed at that time, because I could not get suitable Roller hens. The Yorkshire birds I never tried, as I thought that they would prove too long, and spoil the contour of the Roller. I might, perhaps, have had better results from their song if I had had a good schoolmaster to teach the youngsters, but my birds (Rollers) had never had any training. No doubt training would have a lot to do with it, but I cannot quite understand why the Yorkshire Roller cross should be better than the Norwich cross, for I don't think there is much in the two birds as regards vocal powers. I should very much like to see other opinions on this question, and should also like to see the Roller smartening up a bit.

OLD BREEDER.

HEALTH & STRENGTH

The Feeding and Keeping of Skylarks.

SIR,—As I promised in your issue of April 16th to give two more recipes for making Larkfood, I now have pleasure in giving you the same. First I will give you the recipe for making hard-food. Get 1lb. of peameal, ¼lb. of oatmeal, and three spoonfuls of ground rice; break a fresh egg into a bowl and beat it up well. Then pour it amongst the meal and rice and mix it up well, and put into oven with the same quantity of beef dripping as I mentioned last week, for 15 or 20 minutes, stirring it up every three or four minutes. You can also add two spoonfuls of very fine sugar. When you take it out of the oven, allow the food to go cold; then put three spoonfuls crushed hemp seed, and two spoonfuls of maw seed in, and mix all well up together. For the soft-food, get an empty jam jar, well cleaned, and put the yolk only of a fresh egg into the jar, beating it well up. Then add a few bread crumbs and two or three tablespoonfuls of milk, also two spoonfuls of sugar; stir well up together, and put the jar with the contents into a pan half-full of boiling water over the fire, and boil the contents for ten or fifteen minutes, stirring same all the time. When the food in the jar becomes like a paste, lift out the jar and let it go cold, then take out the food, sprinkle it over with maw seed, and a few drops of sherry wine. If your Larks won't sing after you have tried these recipes, there is no song left in them.

RD. WILFORD.

SIR,—After so much information on the feeding of the Skylark, I purchased three hand-reared ones. Their song is simply grand. They are singing all day long, indoors or out, and are very tame. They would stand a lot of beating in song; they sing madly. Their food is made as follows: ½lb. of sweet biscuits, two eggs, a little liver, and two grated apples, maw, hemp, Canary, and linseed, all cracked and mixed together. I am sure this is a splendid song food. I have been watching CAGE BIRDS for information on the Woodlark. Do they live as long in confinement as the Skylark, and what would be their treatment? I should be delighted if any reader would enlighten me on the Pekin Nightingale's song. Is he a good songster? What is his song nearest—the Skylark's or Woodlark's?

BUDGET.

The Lizard Canary in the North.

SIR,—I had no intention of entering into the above correspondence and would not have done so if Mr. Rukin had not mentioned my name in his last letter. I can assure him that I had nothing to do with the letter written by George Davidson, although I quite agree with what he says. Mr. Rukin admits that Sunderland would most likely have obtained the patronage of the Lancashire and Lizard F.A. before now had it not been for their dates clashing with those of another society which gives classes for both Lancashires and Lizards; which is practically tantamount to an admission that we shall never obtain their patronage at all, for so far as I can see there is no possible chance of either society changing their show dates, and as preference must be given to the society that provides classes for both varieties it is quite clear that we are out of it, at least so long as we cater for the Lizard only. I quite understand the difficulty Mr. Rukin and the members of the L. and L. F.A. are placed in when allotting their patronage, yet I certainly think that an effort of some sort should be made to support societies who are willing to provide Lizard classes, for I cannot understand why the popularity of the Lizard should be subservient, or conducive either for that matter, to the popularity of the Lancashire, and vice-versa. There is no affinity between the two varieties, other than a sentimental one, caused by the two varieties possessing a monopoly of the affections of fanciers in one particular district. I would like it to be clearly understood that these remarks do not imply anything disrespectful to the Lancashire, but apply equally as much to the Lancashire as to the Lizard, for I do not think it right in the interests of either variety that the popularity of one should depend on the popularity of the other. No one admires a Lancashire more than I do, and during the past few years I have several times intended to take up the breeding of them, but unfortunately one cannot always get what he would like. Yet there is not the slightest doubt about their ultimately getting into my room. You will understand, Mr. Rukin, that the formation of the new Northern Lizard Club may possibly place us in the difficult position that you are in, in regard to the clashing of dates, but I will promise you this much, that if I can possibly do so I will send you some entries, and try and persuade other Northern men to do the same. I thank you, Mr. Rukin, on behalf of the Northern fanciers for your kind wishes, and that the members of the L. and L.F.A. may also have a most successful breeding season is the hearty wish of

W. REID.

Proposed Northern Lizard Club.

SIR,—In connection with the proposed Northern Lizard Club a meeting will be held on Saturday, April 30, in the smoke-room of the Fawcett-street Cafe, Sunderland, at 7.0 p.m., when it is expected that a good muster of lovers of the variety will be present to take part in the formation of the club, election of officers, etc. I have been in communication with Mr. J. Keenlyside, the well-known seed merchant, and he has kindly consented to become President of the club if it be the unanimous wish of the members that he should do so. Should any fanciers who would like to attend the meeting not know where the meeting place is I would be very pleased to meet them at the High-street end of Sunderland Station a few minutes before 7 o'clock. In addition to this note I am also personally writing to all known Northern fanciers of the variety, and if anyone who takes an interest in the Lizard has been overlooked I would be very pleased to hear from him at 14, Plantation-road, Pallion, Sunderland.

W. REID.

How to Arm Nets.

SIR,—In reply to Mr. C's invitation I sent for the net and received same per return. I was rather disappointed with it, as I fully expected to find something very difficult to do, but this net presents no difficulty whatever. Any ordinary netter could make one. I have made the same sort for fishermen. Also their landing nets made on the rim and finished in the centre. Also minnow nets on 2ft. 6in. rim, starting them on the ring and finishing dead in the centre, ¼ mesh (try one, Mr. C., and see how easy to do). So you see, Mr. C., you are not arguing with one who does not know his work. I have sent a net to the Editor for you to see; it is made on the same principle. I have also made some with odd thread, so there should be no dispute about making it by hand. If you desire I will make you one exactly like the one you sent, providing you send the material and return the two back.

NETTER.

[If Mr. Connell will make application for the net which "Netter" has forwarded to us, we shall be pleased to send same on to him. —EDITOR.]

Proposed New Cage Bird Society for Evesham and District.

SIR,—Kindly allow me a little space for the purpose of placing before the cage bird fanciers of Evesham and district (who are very numerous) the desirability of banding together and forming a cage bird society for this district. It would be of great benefit and interest to all of us, and help us to keep in closer touch with kindred societies. I fully appreciate the efforts of the local Chrysanthemum Society in providing a few classes for our Fancy at their annual show, but feel that with a proper "Fancy" society fanciers would have more scope and opportunities of testing their birds on the show bench, and what to my mind is more valuable still, obtain valuable knowledge from lectures, etc., which would enable us to rear and prepare our birds for the show bench more ably and efficiently than at present. I should like to see opinions from other local fanciers on the matter, or, coming still nearer to business, be pleased to call a meeting of fanciers.

A. GOULD.

14, Cowl Street, Evesham.

Items from Ireland.

SIR,—In the last issue of your valuable paper there appeared a letter under the above heading from a gentleman who uses the nom-de-plume "Pat." Now, Pat, old cock, I would like to ask you just a question or two. (1) Why are you afraid to do the manly thing and sign your name to your letter? (2) Who asked you, "Has the old Y.C.C. gone?" (3) Who supplied you with the information regarding the £ s. d. affairs of the Y.C.C.? Pat, dear, I may be a soft-looking kind of individual, but I am not quite an out-and-out fool. I wrote to CAGE BIRDS some time ago and suggested that a Cage Bird Union be formed in Ireland, and asked the fanciers to give their views in the Press on the subject. One reply came from a gentleman like yourself, Pat—he was afraid to sign his name to the letter. But I am sure he considered himself very smart when he signed the letter with the nom-de-plume "Dishonoured Cheque." All the Irish fanciers know that there is an individual in the Y.C.C. of I. Club, who has issued cheques that were dishonoured, but why throw the blame of one individual's work on the whole club? You will see in another column of this paper a notice that will show you that the old Y.C.C. is not yet dead, and is not likely to die. Perhaps you might come to the meeting next Monday night and give us a verse on the £ s. d. business you refer to in your letter? I have noticed of late that a number of letters or articles have appeared in the Press, and as a rule are written in the same strain as yours, praising the Y.C. and C.B. Society and, of course, giving nothing but a coat of black paint for the Y.C.C. of I. I admit that an individual in the Y.C.C. of I. has given room for people to talk, but what I object to is this: the parties who have written to the Press did so for only one purpose, namely, to ruin the Y.C.C. of I. and forward the interests of the Y.C. and C.B. Society. According to all that has been written, the committee of the Y.C.C. of I. is everything that is bad; the committee of the Y.C. and C.B. Society, according to these writers, is everything that can be desired. "All is not gold that glitters." I know that some of the members of the Y.C. and C.B. Committee have, no later than last season, performed little jobs that are a great deal worse than issuing cheques to come back dishonoured, and this is bad enough. In writing to you, "Pat," I don't want to cause any trouble in the Irish Fancy, but, at the same time, I am not going to let you or anyone else go on blackguarding the club of which I happen to be the unfortunate hon. secretary, without letting you have what you justly deserve. In reply to your suggestion, re club secretaries' meeting, I shall have great pleasure in giving you my views on the question when you have the courage to sign your name, if you are a man at all.

J. R. HYLAND, hon. Sec., Y.C.C. of I.

Wake Up, Fanciers!

SIR,—Mr. Walter Connell will doubtless be interested to know that I share with him his surprise that my letter of the 27th ult. received publication in your journal. The fact that it did I prefer to ascribe to your sportsmanlike wish to show your readers my side of the question. I certainly did not expect to see it published. I do not regret that it was—except that it now entails my writing a long letter which would otherwise have been avoided—I really meant what I said, and said what I meant. In view of the hostile attitude adopted towards me by your correspondents in last week's issue, I think it will be as well for me to give a recapitulation of the position I hold with reference to the above subject, in order that your correspondents—or at any rate your readers—may see that, whether I am right or wrong, there was at any rate an element of justice in my remarks of last week. In the letter which is to-day criticised in your columns I denied the existence of any danger to the Fancy worth mentioning. To that opinion I resolutely adhere. At the same time I am disposed to admit that—though unnecessary—there can be no harm in taking precautionary measures in protection of our interests, provided those measures are directed on right lines. It is, however, principally because I object most emphatically to the methods adopted by your recent correspondents in regard to this matter that I have, as Mr. Connell expresses it, "lent myself" to this debate. I object for two reasons, first, because I think that the "Limehousing" which has been written lately in your columns is totally against our interests as fanciers, and, secondly, because I consider that it is rank Lloyd Georgian Socialism, naked and unashamed. Let us, then, with a view to considering these two statements assume that the Flowers and Preston case constitutes in itself a grave danger to the Fancy. It is therefore our object to fight this danger and avert annihilation. The first step in this direction taken by your correspondents is to attack the "rich man," without a shadow of reason or justice, mind you, for not one of them would care to say that this is a fight between the rich as a class and the poor as a class, it would be so obviously untrue. My view is that if our hobby is attacked, then in Heaven's name let us defend it. We have nothing to gain and much to lose by attacking the hobbies of others—who have as much right to their hobbies and pastimes as we have to ours. By what insolent right do we expect immunity from attack in our hobby if we cannot let those of others alone? We are, I claim, deliberately manoeuvring to make enemies of the rich and powerful by our unprovoked attack upon them, which cannot possibly bring any good to us. Now, as regards my statement that these columns were being used for political bias, I have unfortunately lost the letter of Mr. C. Elkerton to which I originally took exception. I see, however, a letter of Mr. Alexander Bryden in your issue of the 2nd inst., which, though not so illustrative of my contention, is somewhat similar in tone to Mr. Elkerton's. I ask my opponents to kindly favour me by referring to that letter. I ask them to note its demagogic tone, also its utter destitution of any idea as to how the security of the Fancy could be attained. It is true he proposes that the specialist clubs should "take it up," but mark that he gives no idea as to what they should "take up," and what they should do when they have "taken it up," to advance the interests of the Fancy. With Mr. Elkerton's letter—inasmuch and in so far as my memory serves me—the case was even worse. He began with an absolute tirade against the upper class, and ended with an appeal to someone else to "do something" for the Fancy; though what exactly that "something" is nobody seems to know. Am I, then, not justified in suggesting—I do not affirm it—that these letters were written to surreptitiously introduce into this controversy bias of that phase of politics which thrives on class war? For if that be not the reason of these letters, then the only logical inference to be drawn from them is that the writers believe that with the abolition of "pheasant-slaughter and fox-hunting" the security of the Fancy will spontaneously and automatically follow, which idea is so obviously absurd that I am quite sure the writers did not intend their letters to convey it. Even if we succeed in proving that fox-hunting is as brutal as Spanish bullfighting, what have we done to defend the cause with which alone we are concerned. In view of these facts, I confidently make the very reasonable appeal to you, Mr. Editor, to see that in future this demagogic language is extirpated from your journal. Although, of course, it is not for me to dictate to you as to how you should conduct your own paper, I think it is only fair to those of your readers who, like myself, hate the very word "Socialism," that your correspondents should in this controversy be made to stick to the point. It is obvious that the Fancy has nothing to do with the hobbies of other people; we have enough to do to look after our own. I should be very reluctant to have to give up reading your paper (although, of course, that would not trouble you), but I shall have to deny myself its interesting and instructive articles if this political bias is allowed to continue. I have purposely refrained from criticising the scurrilous letters which are directed against me in April 9th issue, as to reply to such childish platitudes would be beneath my dignity. If, however, any of my opponents would like me to further explain anything in this letter which may not be clear to them, or would like my views on anything I have omitted with reference to this question, I shall be pleased to give the matter consideration—provided their request is courteously made.

A. R. COE.

[Mr. Coe's allegation of "political bias" surprises us almost as much as did his first startling letter. In the conduct of CAGE BIRDS politics trouble us not one jot. We must confess that Mr. Coe reads a political significance into the letters in question which we ourselves are unable to discover.—EDITOR.]

Four Eggs in Three Days.

SIR,—Having read a letter in CAGE BIRDS dated April 16th, from "Two's Company," I beg to state that I have a yellow Norwich hen, now sitting on four eggs. Two of these were laid on April 14th, the third egg on the 15th, and the fourth egg on the 16th, making four in three days, which I believe is not an uncommon occurrence. Wishing "Two's Company" every success, also CAGE BIRDS, which I consider the best paper ever published,

E. J. COOMBS.

SIR,—In answer to your corerspondent "Two's Company," well, I might say that I had a similar case. I had an unflighted yellow Yorkshire hen paired up, and the first morning she laid I found two eggs in the nest; and she laid a single egg on the two following mornings. I sought old and experienced fanciers' advice on the matter, and was told they never knew a case of the kind before. I set the hen and allowed her to sit out her time, and had only one fertile egg, which was one of the two laid on the first morning. I tried her three times that season, and got the same result. I kept her over the winter expecting her to be all right next breeding season. When the breeding season came round I had her paired up again, and just had the same results as in the previous season—one fertile egg in each nest. After trying her twice that season, I decided to part with her. I think your correspondent will find that this hen will be a source of trouble during the season.

BLAIRHILL.

Several Letters unavoidably held over.

The Shows.

SHIELDS AND DISTRICT C.B.S.

The table show, held on April 6th, was not patronised as was expected, but some good ones were on view. Mr. R. Blore (Jarrow) judged.

LINNET, ETC.: 1, Barrass (Linnet); 2, vhc, hc, Steele; 3, Thompson (Linnet). GOLDFINCH, ETC.: 1, vhc, Thompson (Goldfinches); 2, 3, Steele (Bullfinches); hc, Steele (Greenfinch). A.O.V. BRIT.: 1, 2, Steele (Bramble and Chaffie); 3, Smith (Lark). Mr. T. Steele wins medal for most points. Mr. W. Thompson wins show cage for second most points.—JAMES BARRASS, Sec.

FALKIRK AND DISTRICT C.B.S.

Usual monthly meeting held in Oddfellows' Hall on April 7th. After the business a table show of Linnets and Any Variety British Birds was held. The judge was Mr. J. Morris (Camelon), whose awards were well received.

LINNET: 1, 2, Hamilton; 3, Moreland; 4, Morris. BRIT.: 1, 3, Moreland (Greenfinch and Redpoll); 2, 4, Morris (Yellowhammer and Siskin); 5, Prondfoot (Greenfinch); 6, Hamilton (Greenfinch). It was agreed to have a table show at next meeting—Greenfinch and an A.V. British Bird class, meeting to be held May 5th. Members are requested to have annual subscriptions paid on or before May 5th, as books will be closed to old members on that date.—R. HAMILTON, Sec.

CITY OF GLASGOW S.C.

Weekly show, held at Mr. A. Muir's, on 14th April. There was a good attendance, amongst others being Mr. Nicholson, of Newcastle, and a gentleman from Birmingham. The judge was Mr. R. Watson, and his awards gave entire satisfaction.

LINNETS (16): 1, Summerhill; 2, Bibby; 3, Gibb; 4, Dunlop; 5, Malcolmson; 6, Raine. MEALY REDPOLL, ETC. (7): 1, 4, Malcolmson; 2, Dunlop; 3, Hutchison; 5, Craig; 6, Seath. LESSER REDPOLL (16): 1, Malcolmson; 2, Raine; 3, Christie; 4, Dunlop; 5, Todd; 6, McGavin. Three money prizes were given in each class, with the addition of a leg of mutton for best 1st. This was won by Mr. Summerhill, and 2s. 6d. for best 4th by Mr. Dunlop. Classes for 28th April: Field-moulted Linnet, Cock Bullfinch, and A.O.V. Lark.—A. MCCALLUM, Sec.

YORK C.B.S.

A successful evening show was held April 11th in All Saints' Schoolroom, when upwards of 60 birds were staged. York fanciers can congratulate themselves upon having such fine specimens in their possession, most of which could hold their own at any open show. The judges had some difficulty in allotting the awards, there being so little to choose between the specimens.

BRIT. LINNET: 1, 2, 3, c, Boyle; vhc, Simeson; hc, Bell. BRIT. GOLDFINCH, ETC.: 1, 3, hc, Bell; 2, Simeson; vhc, Wright; c, Boyle. GREENFINCH, ETC.: 1, 3, Shorney; 2, Wright; vhc, Hunter; hc, Sissons; c, Bell. BRIT. HEN HARDBILL: 1, Hunter; 2, vhc, hc, Shorney; 3, c, Sissons. A.O.S. HARDBILL: 1, Shorney; 2, 3, vhc, hc, Sissons. SOFTBILL: 1, 2, 3, Sissons. MULE OR HYB.: 1, Shorney; 2, 3, vhc, Boyle; hc, Sissons; c, Bell. FOR SMALL: 1, 2, 3, vhc, hc, Sissons; c, Boyle.—A. WAUD, Hon. Sec.

Singing Contests.

YORK.

Usual weekly Linnet singing contest, held at Bricklayer's Arms, Palmer Lane, on April 9th, when 20 birds entered for competition. Result: 1st, Oldroyd; 2nd, Sam; 3rd, 5th, Harrison; 4th Watson. Judge, Mr. J. Andrews; timekeeper, Mr. J. Limbert. On April 2nd, 20 birds entered for competition. Result: 1st, Storey; 2nd, Harrison; 3rd, Laverick; 4th, Roancy. Judge, Mr. J. Andrews; timekeeper, Mr. J. Lambert, Sen.—WM. EMPSON.

GLASSHOUGHTON.

Usual contest held at Rock Inn, when 15 birds faced the judges. 1st, Wainwright, 60 secs.; 2nd, Longfield, 53 secs.; 3rd, Longfield, 48 secs.; Hodgkinson, 43 secs.; Wainwright, 31 secs.; Higgins, 27 secs.; Nelson, 24 secs.; Higgins, 23 secs.; Dobson, 21 secs.; Nelson, 5 secs.—R. TAYLOR, Sec.

LEIGH.

Linnet singing contest, held April 16th, at Grapes Inn, when 23 birds faced the judges for six prizes for time and quality. Winners for time: 1st, Ellison, 115; 2nd, Mather, 72; 3rd, Holmes, 56. For quality: 1st, W. Howard; 2nd, Statham; 3rd, Ellison. Judges, Messrs. Fearnley, Statham, O'Neil, R. Statham. Timekeeper, R. Fairhurst.—T. STATHAM, Hon. Sec.

SHEFFIELD.

Royds Inn Linnet sing held April 16th, at Mr. Dallamore's, Attercliffe-road. Eight birds faced the timekeeper. Palfreman, 140 secs.; Herbert, 113 secs.; Sweeny, 57 secs.; Palfreman, 38 secs. Contest on April 17th, when seven birds sang for Mr. Dallamore's extra special: Herbert, 55 secs.; Driver, 39 secs.; Driver, 37 secs.; Herbert, 34 secs. Also on April 24th Mr. Dallamore will have a variety show. All birds must be staged at 8 o'clock prompt.—H. WOODCOCK, Sec.

Usual Linnet singing contest, held on April 10th, at Fitzwilliam Hotel, Milford-street, Carbrook, where 23 birds entered for three prizes, two minutes' sing. Langly, 73; Cole, 61; Smith, 61. Cole and Smith sang off for 2nd and 3rd, Cole winning 36, Smith 25. Also on April 16th, when 28 birds entered for three prizes, three minutes' sing. Fenn, 83; Cole, 77; W. Bisby, 53. Also on April 17th, when 27 birds entered for three prizes, two minutes' sing. Palfreman, 82; Joe Robinson, 65; Palfreman, 55; Little Jack, 48; Little Jack, 47; Wilson, 46; Knight, 46; Brown, 44; Little Jack, 42; Little Jack, 40. Also a match between Palfreman and Cole was sung, two minute. Palfreman's "Black Adder" scored 52, 19, 9, 10, total 90; Coles' "Ike," 5, 13, 7, 7, 7, 10, 3, 6, 9, 8, total 75.—A. BROWN, Sec.

BIRTLEY.

Linnet singing contest held at Railway Hotel, Birtley, Co. Durham, on April 6th, when 30 birds faced a crowded house. Visitors from all parts were present. Mr. H. Hall judged and gave every satisfaction. Result: 1st, 2nd, and 3rd, R. W. Boyd.—Mr. HALL, Sec.

LONDON, N.

We have had several handicaps during the past week. Many thanks for announcing our dinner through the columns of your valuable paper. Also I extend thanks to the many friends who attended the dinner, there being no less than 80, who, after the dinner, were kept continuously amused for the rest of the evening by several well-known artistes.—F. WESTMORE.

ADVERTISERS!

Read this Testimony and Remember our Double Number Next Week.

Have done well with all my advertisements in "Cage Birds."—JOHN RUDKIN, (Rawtenstall).

I have this week sent orders to France and Belgium as a result of my advertisements in "Cage Birds."—ENOCH TAMS (Longton).

This is the first holiday in Scotland, and I have been kept at home with callers enquiring about cages advertised in "Cage Birds."—R. MORRISON (Glasgow).

I have had some very good results from my advertisements in your paper, "Cage Birds," and shall advertise in it again as soon as I have anything for sale.—JOHN DEWSNAP (Glossop).

I have had so many replies to my advertisement in "Cage Birds," for hen Bullies that I am unable to reply to them all individually.—J. OVENSTONE (Grangemouth).

Kindly thank the numerous enquirers for the Pom. bitch advertised in "Cage Birds," as they were too numerous for me to reply to all. I had replies from all parts of the country.—J. H. ROWLEY (Bilston).

I have had so many applicants for Budgerigars through my advertisement in your last issue of "Cage Birds," that I am unable to write to all. Will you please thank all applicants in C.B.—G. W. SAUNDERS (Sutton, Surrey).

I have found that I get far more replies from advertisements in "Cage Birds" than from those of any other paper. Moral, Stick to C.B.—not "Confined to Barracks," but good old "Cage Birds."—T. A. WEBSTER, 2nd Bn. K.O.Y.L.I., (Aldershot).

I have had so many replies to my advertisement in "Cage Birds," that I find it impossible to reply to all of them. Enquiries came from all parts, which shows how vastly read is the leading cage-bird journal.—F. COSIER (Redhill).

I have exported nine consignments of Canaries abroad since Christmas, through my advertisement in "Cage Birds," which shows that the paper has a large foreign circulation. Wishing you every success.—J. TAYLOR (Frizinghall, Bradford).

I am not able to answer the applications I had in reply to my advertisement in "Cage Birds," as they were too numerous. I am an old reader of "Cage Birds," and a lover of birds.—T. RICHARDS (Eorth, R.S.O.).

Kindly thank all applicants for my Buff Norwich cock Canary and yellow hen, advertised in "Cage Birds." I sold them on the Saturday following publication. I had numerous replies, which speaks well for "Cage Birds" as a medium for advertising surplus stock.—A. FLETCHER (Sedgefield).

GLASGOW.

City of Glasgow S.C. usual weekly singing contest, held at Mr. Andrew Muir's, Saltmarket, when 8 birds sang. 1st, Henderson; 2nd, Graham; 3rd, White. On 23rd April, a brass kettle, in addition to the usual money prizes, will be competed for.—A. MCCALLUM, Sec.

CASTLEFORD.

Weekly Linnet sing held at Britannia Inn, Lock-lane. There was a good muster of members and friends. Twenty-four of the best birds in the district sang for three good prizes. Result: 1st, Dobson; 2nd, Caddy; 3rd, Longfield.—WALTER DOBSON, Hon. Sec.

LEEDS.

Leeds Linnet F.A. usual quality contest held at King's Head, Shannon-street, April 9th, when 16 birds sang. Judges, Messrs. Naylor and Jennings. 1st, Hardcastle; 2nd, Sissons; 3rd, Wigfield. Also on April 10th, when 25 birds sang. 1st and 2nd shared between Sissons and Hardcastle; 3rd, Wigfield; 4th, Richardson. Judges, Messrs. Melia, Naylor, and Jennings. Also on April 16th, when 15 birds sang. 1st, Hardcastle; 2nd, Sissons; 3rd shared between Stead and Madden. Judges, Messrs. Naylor, Melia, and Dean. Also on April 17th, when 30 birds sang. 1st and 2nd shared between Richardson and Hardcastle; 3rd, Bland; 4th, Bryan. Judges, Messrs. Jennings, Naylor, and Hobuh. Please note all subscriptions are due on May 8th for our Whit-Monday contest.—WILSON NAYLOR, Hon. Sec.

NEWTOWN (Leeds).

Usual week-end Linnet singing contest held at Prince Albert Hotel, on April 17th, when 18 birds sang for three good prizes. Result: 1st, D. Madden; 2nd, Soloman; 3rd, Butler. Judges, Messrs. C. Towers and R. J. Smith. Timekeeper, Mr. A. Lorriman. Our annual Whitsuntide contest will be held on Whit-Tuesday, and hope to see old fanciers and new.—A. Turner, Sec.

We had a very good entry at our quality Linnet match, April 16, considering it was the first match of the season held at the Plasterers' Arms, Skinner Lane. 18 birds faced the judges. Messrs. J. Chinendale and J. Hargreaves. All birds sang. 1, Soloman; 2, Ward; 3, Green (Woodhouse). Result of time-singing match held April 17:—1, Clark; 2, 3, Hargreaves. A quality match will be held April 23, commence 3 o'clock.—JOE HARGREAVES.

WIGAN.

An open Linnet match was held at the Weavers' Arms, when 19 birds sang for six good prizes, and some very fine singing was heard. Birds come from Wigan, Standish Park Lane, Westhoughton. Judges, Messrs. Millingan, Parker. Timekeepers, Messrs. Green, Parker, Macfarlane. Winners for quality: W. Millingan, 1st; J. Macfarlane, 2nd; P. Green 3rd. For time: W. Millingan, 130, 1st; P. Green, 129, 2nd; T. Mawdsley, 107, 3rd. We spent a most enjoyable musical evening after the match. There will be an open Linnet match at the Blue Bell Scholes, when the landlord is giving £1 to the entrance fee; we hope the Linnet men will turn up in good numbers.—A. PARKER, Sec. [Your letter reached us with only a half-penny stamp on it, whereas all letters, whether the envelope is sealed or not sealed, must bear a penny stamp; in consequence, we were called on to pay a surcharge of one penny.—EDITOR.]

THE MYSTERIES OF HYBRID BREEDING

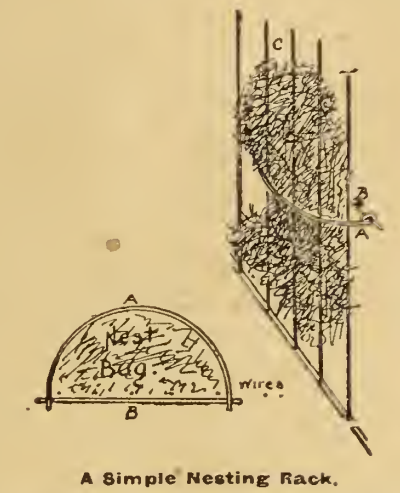
Will all be found revealed in

"CAGE BIRD HYBRIDS."

The Coloured Plates are Magnificent.

Part 1 is now on Sale. Price 6d., post free.

Illustrated Ideas



Every "Illustrated Idea" used will entitle the sender thereof to two shillings and sixpence.

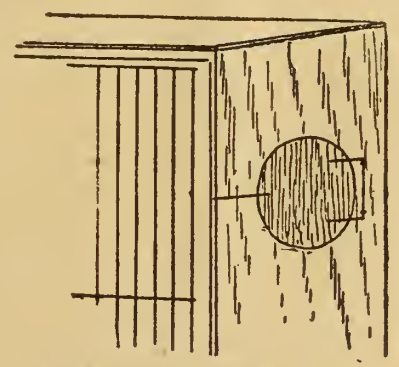
No. 402.

A Holder for Nesting Material.

Sent by Mr. T. Longfield, 2, Garnet Street, Birkenhead.

Enclosed is a sketch of a little device I have in use on my cages, with good results. "A" is an ordinary piece of cage wire cut about 3ins. long, with a small eye turned on each end. It is then bent into a semi-circle, and a piece of wire "B" is cut about 2½ins. long to fit into the two eyes. All that you have to do after making

A Simple Nesting Rack.



these is to put it round the nest bag and press it so that the piece of wire can be passed through. I find that this holds the nesting material much longer and tighter than tying them with string, and it is also easy to make. "C" represents the cage wires. I think that the sketch will practically explain itself.—TOM LONGFIELD.

No. 403.

A "Safety" Show Cage Door.

Sent by Mr. J. Taylor, 49, Princess Street, Wharton, Winsford, Cheshire.

Enclosed is a sketch of a door fastener which is very simple and safe, and will, I think, do away with the maltreating of birds at, and the stealing of same from, shows. First bore a hole

A "Safety" Show-cage Door.

through the end of cage and through about an inch of the door; then take a piece of ordinary cage wire and press it in. Cut this off, leaving about one-sixteenth of an inch protruding, and you will find it is impossible to open the cage door without a pair of plyers to take hold of wire; this you can do either from the front or from the back of cage.—JOSEPH TAYLOR.

The Preston and Flowers Defence Fund.

In last week's issue we promised an important statement in connection with this Fund. Curiously enough, however, the Law prevents us carrying out this promise—the law's delays, that is, for the case was actually in the cause list on Tuesday last, but three or four actions claiming priority of hearing were long spun out, with the result that the case we are all so interested in got "crowded out" on both Tuesday and Wednesday. "Flowers versus Watts," to give the action its official designation, was in the list to come before the Lord Chief Justice, Mr. Justice Pickford, and Mr. Justice Bray (in the Lord Chief Justice's court). For how long it stands "shelved" now, none can say; it may be reached next week, or it may not get a hearing until the week after.

In addition to the £62 3s. 5d. acknowledged last week, we have had come to hand 4s. 6d from the Highgate, Hampstead, and Dist. C.B.S., and 3s. from the City and County of Perth O.S., bringing the aggregate subscriptions to £62 10s. 11d.

Under the White Rose.

THE two committee meetings of the Y.C.C. and C.M.Y.C.C., which took place on Saturday last, were extra well attended, practically all members being present. Some good discussions were opened out on the various points raised, in respect of the further work of the clubs, and the general meetings promise to be very fruitful, much important business being in hand.

FIRST the Y.C.C. held the boards, the Chairmau, Mr. F. Armstrong, occupying the place of honour. All the rules were gone through to see if any improvements could be made, and these will be brought before the general meeting, which is to be held on Saturday, April 30th, at headquarters, Market Tavern, Bradford, at 6 o'clock prompt. Novices should turn up in good numbers, as something is to be brought forward which is greatly to their benefit, and it may require their support to carry it through; anyhow, there will be nothing lost, and perhaps much gained, by their attendance. Y.C.C. members will also please note that the ballot papers must be returned to the scrutineers not later than Monday next, the 25th inst. Kindly note it is the special wish of the secretary to receive a good return of the papers.

MEMBERS of the committee of the C.M.Y.C.C. next came on, under the chairmanship of Mr. W. Richmond, and here I must state that it is impossible to hold the general meeting of this club to-day, Saturday, April 23rd, in consequence of the rooms being already engaged. But Messrs. Towers and Garnett hope to hold it on Saturday next, April 30th, if at all possible. Keep your eye on the Club and Society Notices column all ye that are interested in the cinnamon marked 'uns; it will be duly published there. Should it take place on the 30th it will have to be during the afternoon, so as to come to a close before 6 p.m., at which time the Y.C.C. meeting is advertised to start. The novice question is also to crop up here. Last season the society held two novice classes at each show where the patronage was given, but, sad to relate, a very meagre number of birds were staged at some of the shows, and as they guaranteed half loss on these classes, a little hard cash has gone that way during the season. But what faces these classes now is the alteration to the Novice Section of the Y.U. In future eight Yorkshire classes are to be provided for novices at all Union shows, and it looks possible that the Cinnamou marks will play a prominent part in this extended classification, and if so, the two classes, as held during last season, will be superfluous. Well, it is for the members to decide.

TO-DAY (Saturday) the Market Tavern will be well infested by fanciers at 3 p.m. The National Green-marked Y.C.C. hold their general meeting, and I hear there is also to be held the first meeting of the delegates of the Yorkshire Union for the coming session. My word! What meetings! They are as thick as blackberries in September. It looks like making the Market Tavern the permanent quarters.

YORKSHIRE County British Bird and Mule Club are also preparing for their annual general meeting, and this, too, is, if possible, to be called for April 30th, at 7 p.m. Members are expected from far and near. A much greater interest is now being taken in this club by outside fanciers, and some are expected to put in an appearance this year. Let us hope they will carry away the assurance that those resident in Bradford are doing their best for this branch of the Faney.

WHEN reading in CAGE BIRDS last week, under the heading "The Future of the Cage Bird Union," I was somewhat surprised to see this column mentioned, and was greatly gratified to read the remarks of Mr. J. W. Metcalfe, anent the C.B.A. and specialist clubs. But I would go even further than Mr. Metcalfe, and say, why should the C.B.U. interfere in any way whatever, as to where a fancier should show his birds? I have been a member of the Green C.A. for some years, and during the time the question of the G.C.A. joining the C.B.U. was under discussion I was greatly perplexed as to what position I should be in. I am a member of a society affiliated to the Y.U., and a member of five other specialist clubs besides the G.C.A. Therefore, had the G.C.A. decided to throw in their lot with the C.B.U. I should have been faced with the following: Should I leave the G.C.A., or should I leave the other six societies? By the G.C.A. joining the C.B.U. I should have been debarred from exhibiting at any show where the patronages of these other six societies were given. I don't show much, but, like most other fanciers, I like to show when I like, where I like, and under whom I like. It has made no difference. Be it C.B.U. or Y.U., or any other show, if I think to show, nobody should be able to say where I should show. If shows are to pay, they must be open. What has puzzled some in regard to the C.B.U. is this: How could they expect to succeed, and flourish, when the advantages of being out are greater than the advantages of being in? Who, for instance, would join, when by doing so they would be debarred from showing at certain shows where specials, etc., given by their specialist clubs were to be competed for? What is wanted is some advantage and help for being in, and not a hand capping.

"STRAIGHT 'UN."

Success in the Breeding Season.

Some Helpful Hints Towards Its Attainment.

By MISS O. BARROWS.

At the beginning of the breeding season it is very necessary that everything in one's room should be as scrupulously clean as one can make it. A little trouble at the commencement will save days of labour and much mortification when the birds are settled down and it is difficult to carry on any renovating operation or spring-cleaning successfully. Of course, to those who are workmen familiar with wood and paint, the matter is a simple one, as it is also to those who need not consider expense. The most satisfactory and lasting decoration for the cage is undoubtedly enamel, as it can easily be cleaned by sponging at any time.

The Danger of Lime-wash.

When I first started, I had my cages whitewashed, but it does not look well for long, as the splashing of water spots it, and it is difficult to wash. It is also fraught with great danger to the birds unless the right kind of lime is used and it is thoroughly dry and hard before birds are allowed in the cages. Should the birds get the lime into their eyes, unless attended to at once, they will be blinded. I had this accident occur to a bird of mine. The right remedy is to apply a few drops of pure olive oil, or indeed any wholesome oil, such as castor or cod liver. The lid should be opened carefully and a spot dropped into the eye. In the first place, the eye should be brushed with a dry, clean camel's hair brush to remove any lime, and then bathed with weak vinegar and water, and lastly the spot of oil applied.

While on the subject of blindness, I may say I have used the following lotion for cataract, and if it is applied for six weeks directly the complaint is noticed, I think it prevents its getting any worse, but it does not cure. Lotion: Five grains of sugar of lead to a wineglassful of rain water. Bathe the eyes with this.

Crested birds are most liable to cataract, owing, I think, to the heavy feather irritating the eyes, but it is a mistake to be too hasty in condemning a bird as useless. This blind bird of mine was a wonderful breeder; he was assiduous in his attentions to his wife, and my astonishment was great to see him feeding the young when they were ten days old. It is necessary where there is some sight left to give such a bird a light-coloured hen.

Preparing the Cages.

Before commencing to paint or distemper the cages they should be thoroughly washed inside and out with soft soap and water. The backs should be sponged over with paraffin, and any cracks should be stopped with putty, well pushed in with a small chisel, so that there shall be no crevices to harbour red mite. The more careful you are to keep the insides free the more likely the mite are to choose some more hidden quarters, such as the backs of cages. The paraffin and the putty must be allowed to dry before applying the distemper, as the oil in the former will ooze through and spoil the appearance of the inside distempered surface. Hall's Distemper, or any of those advertised in the columns of CAGE BIRDS, is an easy thing for a beginner to use, as you mix it with water, and it needs only one coat, and dries directly, so that it is ready for use in a few hours. Therefore, a little energy admits of its being done twice a year—spring and autumn.

The chief difficulty in using distemper is to get it thoroughly smooth in the water and to the right consistency. An admirable method is to pass it through a hair or fine wire sieve, rubbing it through with the back of a large wooden spoon. It can then be applied rapidly and smoothly with a large whitewash brush, the painting of one cage taking only a few minutes.

Black carriage varnish is a good outside paint, and only one coat of this need be given. It has a nice glazed surface, which washes well. The distemper has the same disadvantage as the whitewash, viz., that when splashed it becomes spotted. When necessary I sponge the inside of my cages with a preparation used for ridding rose trees of green fly—a combination of soft soap and quassia chips boiled. It is wonderfully cleansing, and a destroyer of red mite.

In addition to painting the cages all seed boxes and crockery should be washed, breakages replaced, and any small repairs attended to. You can then hang up your breeding cages ready for their occupants, and prepare nest pans and put in suitable sand.

The sand I use is a mixture of gardener's sand, with the addition of road sand and crushed free stone; and in addition I keep a store of old wall mortar and crushed egg shells of unboiled eggs; the latter are necessary for helping the hen to form the shell of her eggs. Also put a piece of cuttlefish bone between the bars of the cage for the birds to peck at; this serves the same purpose. You must not, however, start doing this and then neglect it in the rush of the season, or you will have soft-shelled eggs and egg-binding.

The Nest Boxes or Pans.

The nest boxes or pans are the next thing to prepare. There are various kinds. Some people use one kind and some another. As a rule, I begin with a few wooden nest boxes as they are warmer, and begin using the earthenware ones when the weather is summer-like. Some hens show a predilection for a particular kind, and you must indulge any whim; more especially must you indulge whims if the hen thinks the floor is a nice place to lay upon and scorns higher regions. You must then try the nest-boxes or pans in various positions, and cover the front part of the cage opposite the nest with a sheet of brown paper to make it private, as many hens are nervous and will not go near the nest while anyone is seen to be in the room.

It is most important to take every precaution against red mite in the nest pans. The pans should be wiped all over with a small piece of sponge soaked in a mixture of paraffin and olive oil, inside and out, especially round the rims, and in the crevices of the joints of the woodwork.

Nest Matters.

You can let the hen build, but you must re-make the nest before setting her, in order, by dusting it with pyrethrum powder from a small pepper box, to take that extra precaution against red mite. When you do the nest try and keep to the shape the hen has selected, as she has her own ideas on the subject; she will sometimes build up a bank on one side to hide herself the better, or will fill up all the corners to make it smaller, and you should not overlook these things. A fowl's egg (hot) turned round in the nest when finished, makes the material close and smooth. And don't forget that a soft lining of doe or cow hair is the last thing to provide, otherwise the hen will do it all over again and line it with feathers plucked from herself and her mate.

The cock also likes a voice in these matters. Unfortunately his doings are generally of a playful or destructive nature until he sees the hen is in earnest and is sitting steadily. Some cocks habitually molest the hen and break the eggs. Such must be removed while the hen is sitting, and oftentimes until the young are ten days old, as a very fresh young bird will nip off the toes and beaks of the newly hatched with a zeal akin to joy and far removed from fatherly solicitude.

To return to the prevention of red mite. These several precautions are necessary if you wish to keep your bird-room free from these pests, especially during the hot weather. Where you observe traces of the mites you must paint the crevices with a fairly strong solution of carbolic acid and water, using for the purpose a small camel's hair brush; but the greatest care is necessary not to let even a spot of the poison fall, as if picked up with the sand it would be fatal to the birds. It is certain death to the microbe which will, however, survive an application of paraffin, they having, like the proverbial cat, nine lives. You will perceive the presence of mites by the appearance of small grey white specks.

Before Putting Birds in the Cages.

Before putting the birds in their cages it is as well to give them a bath with quassia in the water. This you make by pouring boiling water over a few quassia chips overnight in a small basin, leaving it to soak; then put a teaspoonful of this decoction cold into each bath the next morning.

As you put each bird into its quarters dust under the wings and tail with pyrethrum powder. This is a good practice, and should also be done when the young are put into a clean nest at from 10 to 12 days old, and again when they are weaned and put into a flight cage to grow. By these means, systematically carried out, your room ought to be far from an ideal abiding place for those little bloodsuckers, the red mites. Should you at any time come across them, however, an application of carbolic should be made at once. Nest pans that have become infested should be dropped straight into boiling water and carbolic and carefully oiled afterwards as previously described.

The "Pink of Condition."

It requires considerable experience and some little time before a beginner knows when his birds are in proper condition to commence breeding operations—that "pink of condition" so necessary to ensure successful results. And he is apt to make a mistake and allow them to start housekeeping before they are ready.

The cocks should be singing lustily and in the best of health and vigour. They will be flying all over the cage in the greatest excitement trying to attract the attention of the hens or of a particular hen. Should there be a lady whose charms one particularly admires, he will stamp to and fro on the perch, and sometimes go through the pretence of feeding his family by regurgitating his food and administering it to his toes, as if they were young beaks.

The hens are equally sure to evince great anxiety to attract the notice of the cock bird, and answer his song with an encouraging "sweet" and twitter calling to him continuously. Such a hen will pace the perches flapping her wings all the time, carrying any bit of material about that she can lay hold of. Often she pulls out her own feathers or those of her companions, and sometimes a hen will hop about holding fast on to a heap of feathers still attached to her own little neck or wing.

On the Window-sill.

Again, she will hop from the perch high into the air and down again continuously and joyously as the cock bird sings his love ditty. I have been interested to observe a similar spring action on the part of a hen Great Tit performed on my window sill, the little hen being imbued with the spirit of the birds she hears in my bird-room. The wild birds visit my window sill for the food I place for them, and they are so attracted by the singing of my caged pets that they show me many little tricks of their own species. Some remain on the sill when the window is open and give occasional outbursts of their own love ditty. This, however, is all by the way.

Such is a very happy state of affairs, and one to be envied by every breeder whose main object during the winter months has been to work up his stock to this "concert pitch." But having reached this pitch you must not frustrate the natural inclinations of the birds or trouble will ensue, and grief and disappointment will react on the little hearts and play havoc with their health. The hens especially may die egg-bound, or suffer from nesting diarrhœa and inflammation, which may prove fatal, and at all events spoil them for the season when at last they are allowed their own sweet will. It is a good plan to occasionally give for one day a dose of Epsom salts in the drinking water, as much salts as will cover a sixpence; this should be put to an ounce of warm water and afterwards allowed to cool. If you have a few hens to spare they should be kept in another room if possible until you are ready to pair them up.

I shall hope on a future occasion to acquaint my readers with the methods I adopt during incubation and the hatching of the young.

The Young Naturalist.

Prizes of 1s. and two of 6d. each will be given weekly for the best three anecdotes about birds written on postcards. Competitors must be under sixteen years of age, and state whence stories are taken. Two stars indicate the Winning Contribution; one star the runners up.

*A Thief

Once we had a Magpie which used to steal. We missed a thimble and a spoon first, of which we took no notice. Then my father missed a gold scarf-pin, which he prized very much. My sister one day saw our Maggie with a ring in its mouth, so she determined to follow it to its hiding place, which was under a bush, where my sister found all the spoil.—Sent by W. N. Sails (age 15), 10, Eastborough, Scarborough.

**A Sentinel Dove.

My mother had a Dove which lived to the age of 16 years. We kept it in a cage outside the kitchen door, and he was quite as good as a watchdog. If a stranger came in the yard he would ruffle up its feathers and coo very loud. We used to bring him indoors, and he would march up and down in front of the mirror admiring himself. He also would sit on top of the Canary's cage, and try to make friends with the Canary.—Sent by E. Hampton (age 15), 27, Osborne Street, Slough, Bucks.

*A Tame Feeder.

One day we were taking a walk along one of the roads here, when my dad heard a bird chirping in a small holly tree. We found it was a young fledged bird. We took it home and fed it. It was very tame, and opened its mouth to be fed, and every time we did so it chirped, and flapped its wings. It can now feed itself. Sometimes we let it have a fly around the room. My dad thinks it is a crossbill, and we have seen several more like it in the pine trees feeding on the pine cones.—Sent by Augustus L. Fox (age 10), 3, Laurel Villas, Eve Road, Woking.

Books for Bird Lovers.

Brief particulars of some of "Cage Birds" SPECIAL PUBLICATIONS for keepers of birds, with post free prices.

THE HYGIENE OF BIRD-KEEPING, 1/1.—By W. Geo. Creswell, M.D. Thoroughly treats of modern hygiene (the science of health) in bird-keeping.

SEPTIC FEVER OR CANARY PLAGUE, 7d.—By R. H. Clarke, M.D. The only booklet published concerning this dread disease, which Dr. Clarke has given very special study.

THE NORWICH PLAINHEAD CANARY, 1½d.—By J. H. Payne. Pronounced by all experts to be a most valuable pamphlet concerning the breeding of the variety; written by one of our leading judges.

CANARY BREEDING FOR BEGINNERS, 7d.—By Claude St. John. A Practical, up-to-date guide to Canary breeding, designed specially for the use of the beginner. Deals very fully with the choice, sexing, and mating of the birds, feeding for condition, the cages and their fittings, the bird room, egg-food, nest-building, rearing and moulting the young, colour-feeding, training for show, and all the difficulties likely to confront the breeder.

MEATING-OFF AND FEEDING SOFTBILLS, 6½d.—By John Frostick. No fancier of Insectivorous Birds who wishes to succeed in his hobby can afford to be without a copy. It also contains notes on Bird Trapping, Cages, etc.

SEEDS, FOODS, AND WILD PLANTS FOR CAGE BIRDS, 1/2.—By various leading authors. Full information on the seeds suitable for all cage birds, their food values, uses, etc., with descriptions and illustrations of the wild plants indispensable to the successful keeping of British and other birds.

HOUSE'S CANARY MANUAL, 1/2.—By C. A. House. A thorough, practical guide to the general management and breeding of Canaries, dealing fully with the breeding, etc., of every member of the Canary family, including the Roller (or Singing) Canary. An illustration of each bird, by the master Canary artist, Mr. H. Norman; exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge.

BUDGERIGARS AND COCKATEELS, 6d.—By C. P. Arthur. The breeding of Budgerigars and Cockateels is recognised as one of the most profitable and pleasure-giving sides of foreign bird-keeping. This eminent authority gives very full details upon how to keep, feed, breed, tame, and teach them to talk.

PET RABBITS, CAVIES, AND MICE, 1/1½.—By George Gardner. Full information on housing, feeding, breeding, exhibiting, and keeping for profit. A complete practical guide, with illustrations from photographs.

FOREIGN BIRDS FOR BEGINNERS, 1/1.—By W. T. Page, F.Z.S., etc., Foreign Bird Expert to "Cage Birds." A highly instructive Manual. It contains a magnificent coloured plate and a number of black and white illustrations. Indispensable to all keepers of Foreign Birds. Replete with useful hints.

BRITISH BIRD MANUAL, 2/3 (cloth bound).—By H. Norman; or may be had in two parts. Part 1: "Hardbills," and Part 2: "Softbills." Either Part, price 1/1, post free. Each part contains a beautiful and life-like coloured plate and numerous illustrations of birds and cages. Up-to-date information on the keeping of British Birds; full of extremely valuable hints.

COLOUR FEEDING OF CANARIES AND OTHER BIRDS, 3½d.—By J. W. Ramsden. Tells you how to mix the colour-food, and how to moult the birds to get the richest possible colour.

THE STOCK BOOK, 7d.—By G. E. Weston. Of our invaluable "Breeding Room Register," a well-known fancier has said:—"It makes bird-breeding easy." No breeder of birds can possibly afford to be without it. It simplifies the operations in the bird-room and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred. Contains both Pedigree, Breeding, Young Bird, and Show Registers of simple and unique character, in addition to useful account pages, and many invaluable "Hints for Emergencies."

AVIARIES, BIRD-ROOMS, AND CAGES, 2/3 (cloth gilt).—By H. Norman. Contains ten lovely full-page photographic plates. A practical guide which deals thoroughly with the proper Building, Fitting, and Management of Aviaries and Bird-rooms, and the making of Cages.

YORKSHIRE CANARIES, 1/1½.—By H. W. Battye (Past President of the Yorkshire Union). Absolutely the very best Handbook dealing with the Yorkshire and its sub-varieties. Contains complete Instructions upon Pairing, Breeding, Moulting, and successful Exhibiting, also how to treat in both health and disease.

NORWICH CANARIES, 1/1.—By C. A. House. Tells the fancier all that he needs to know to enable him to become successful as a breeder, and exhibitor of the Norwich Plainhead. The chapters on **"Forming a Stud,"** and **"How to Produce the Ideal"** are worth the cost of the whole book many times over.

BIRDS OF THE COUNTRYSIDE, 5/4.—By Frank Finn, B.A., F.Z.S. A handbook to the wild life of all our familiar British birds; their appearance and habits accurately described. With 12 beautiful coloured plates, and 118 photographic illustrations. A charming gift book.

PETS, AND HOW TO KEEP THEM, 5/4.—By Frank Finn, B.A., F.Z.S. Gives the correct method of housing, feeding, and managing every kind of pet; all sorts of animals are dealt with—monkeys, dogs, cats, lizards, tortoises, also gold and other fancy fish, while there is a large section devoted to birds. Contains many coloured plates and illustrations from photographs. Another charming gift book.

FANCIERS' PRINTING.—Fanciers requiring business notepaper, postcards, trade envelopes, etc., should write us for a quotation. We are now in a position to supply these at specially low rates combined with first-class work. Artistic memos., with block of any desired bird, and fancier's name, address, and 12 words of description, 250 2/-, 500 2/6, carriage paid.

Medicines for Cage Birds: Their Application and Doses.

By GEO. YATES, M.R.C.V.S.

(*Continued from page 354*).

The preparations of iron already enumerated are best given by themselves, owing to their ready solubility and to the fact that they are incompatible with so many other drugs—they alter the character of many infusions, such as infusion of gentian, orange, etc., owing to the tannic acid contained in the latter. In the case of no other metal can we speak so definitely of its *modus operandi*. Its action on the blood is almost unique of its kind, because its specific action is exerted upon the blood corpuscles, consisting of the combination of iron as one of its constituent elements. In healthy subjects "a course" of iron increases the number and value of the red corpuscles, whilst in the anæmic the rapidity of these changes is remarkable in fortifying the system where disease is imminent, and in convalescence from acute disease it is a valuable drug.

For Young and Unthrifty Birds.

Phosphorous preparations, such as *Calcium Hypophosphate* and *Sodium Hypophosphate*, both readily soluble in water, in doses of one grain to each ounce of water, may be given with advantage to young and unthrifty birds; it greatly assists in building up bone tissue. This is one of the drugs of which part are retained in the tissue and become cumulative; it should not be administered for any great length of time, or fatty degeneration of various organs may occur.

Bismuth.—Of the salts of bismuth the carbonate and subnitrate, owing to their astringent and sedative influence on the bowels, are useful remedies for diarrhœa occurring in delicate birds or those exhausted by other causes. It may be given alone, or may be combined with alkalies like *Sodium Bicarbonate*, or with opium. My experience is that bismuth uncombined is not only efficacious, but the safest preparation it is possible to give for diarrhœa. Five grains may be given in a little bread and milk, and repeated daily; it is insoluble in water. It acts by coating the irritated mucous membrane lining the intestines, and it is questionable as to whether it ever becomes absorbed, its action being purely local.

Bromides of Potassium, Ammonium, and Sodium, all very readily soluble in water, exert a special action on the nervous system; they lessen nervous excitability. Birds subject to fits and epilepsy, particularly the latter, receive a soothing and hypnotic effect from its administration. Doses of two grains to every ounce of water, given subsequently or prior to an attack, greatly ameliorate the symptoms. It should not, however, be given for very long, owing to its depressant action upon the heart, but is to be used only as required.

Tincture of Iodine, as one of the preparations of Iodine made with Iodine, Potassium Iodide, Alchohol, and water, is very serviceable as a local application for regenerating injured structures, enlargements resulting from fractures, after reduction of dislocations, cramp, or rheumatic affections of the joints; it should be carefully painted on with a camel's hair brush, or cotton wool held in forceps. A convenient form for general use in the treatment of localised ulcerations is a mixture of tincture of iodine, 1 part in four parts of glycerine. None of its medicinal forms should be used as being fraught with danger.

Elixir of Vitriol.

Acids.—Of the acids I shall here only deal with one, viz., *Sulphuric Acid Aromatic*, otherwise known as "Elixir of Vitriol," prepared from Sulphuric Acid, Alchohol, Spirit of Cinnamon, and Tincture of Ginger, which, if given in small doses, rouse the appetite and aid digestion, at the same time allaying thirst. It stimulates the liver, and is also an astringent, correcting diarrhœa of a more troublesome nature. It may be given in the drinking water, three drops to every ounce of water to weak and unthrifty birds. It improves their general condition, and the lustre of their plumage. Great care, however, should be exercised not to extend the treatment over too great a length of time, as it then becomes a necessary evil, which when withheld is followed by loss of condition.

Boracic Acid. — As a local application for wounds and injuries of the claws where practicable and the bird very tame, Boracic Acid in solution, made by dissolving one half-teaspoonful in half a pint of hot water, and allowing to cool to body temperature, is a useful antiseptic in suppurating wounds. It will be found applicable more to the larger birds, when by immersing the injured part in this warm solution for five minutes twice daily healing will speedily be brought about.

In regard to the smaller birds and those of a nervous temperament there are a large number of antiseptics at command, but one which I especially favour, and which is in common use to-day in surgery, is Lysol, which can be procured at any chemists. Mixed with water in a .5 per cent solution, either hot or cold, it forms a very reliable dressing for wounds and injuries occurring in any part, and may be applied by means of a piece of cotton wool or by a camel's hair brush. As a disinfectant of cages and aviaries a 1 to 5 per cent. solution is germicidal.

Brandy may be Useful.

Alcohol in the form of brandy is frequently administered to birds, particu- in cases of collapse. My correspondents frequently inform me that they administer several drops by the beak, but with no good result, the bird never rallying. Probably had they done nothing the results would have been different. It should be given diluted in the drinking water for colds, catarrh, and bronchial troubles, and never administered to a bird in a state of collapse, for then the power of swallowing is almost lost, as is the case during fits and epilepsy, the raw spirit terminating its existence.

Spirit of Nitrous Ether, also named "Sweet Spirits of Nitre," is a favourite remedy in the Fancy for bronchial troubles and catarrh. It may be given alone or in combination with Syrup of Squills, Acetate of Ammonia, and Tincture Camphor Co. It is very useful in febrile diseases, lowering the temperature, loosening the exudate in bronchial affections and allowing easy respiration. A useful prescription containing the above is the following:—

Sweet Spirits of Nitre 3 drops.
Aromatic Spirits of Ammonia 3 drops.
Syrup of Squills 5 drops.
Water 1 ounce.

This mixture may be given two or three times daily freshly prepared.

Ipecacuanha Wine may be substituted for either one of these ingredients if so desired in 3-drop doses. Diluted as above, it produces immediate local actions such as reflex cough, increased secretion. It is thus an expectorant, increasing at once the expulsive acts and the amount—that is to say, the liquidity of the expectorate. If injudiciously given, however, it may cause great depression.

(To be continued.)

A Gentleman's Watch

The "Express" English Lever is Entirely British throughout, and incorporates every modern perfection. Splendid ¼-plate Movement Jewelled, with Compensating Chronometer Balance controlled by Breguet hairspring. Absolutely accurate. In the Courts.

The Widow and the Starling.

A remarkable case was heard at Amlwch on April 15th, a widow, Mrs. Griffiths, of Bryn Mor, being charged with cruelty to a Starling.

A neighhour, Mrs. Stubel, stated that she saw the bird in defendant's garden with a piece of string tied round both its legs, the other end being secured to a piece of wire netting. When it attempted to fly away the bird was violently jerked. When spoken to defendant said, "No, I shan't let it go; I want to make it suffer like it made me suffer during the night. It got into my bedroom and nearly frightened me to death. I would like to tear the little devil to pieces." Witness's daughter cut the string.

Defendant, who denied intentional cruelty, said she intended the Starling to frighten other birds. She was find 10s., including costs.

Violating the Close Season.

At the Woking Petty Sessions, on April 16th, G. Dean, B. Bryan, and T. Simpson, all of London, were summoned for having had wild birds in their possession, at Byfleet on March 25th.

P.C. Rose said he saw defendants on Good Friday at Byfleet. Two of them had a tame bird each and some lime wires; and the other defendant had a cage containing 10 freshly-caught birds. On being liberated eight birds flew away, and two fell to the ground.

Defendants, who said they were out of work, were each ordered to pay 6s. costs.

S. Watson and R. Staines (a lad), both of London, were summoned for having used lime for the purpose of taking wild birds, at Send on March 28th.

P.C. Lightfoot said he saw defendants in Newark Lane, Send, sitting by the side of the road. On the opposite side on a piece of waste land witness saw a basket containing the bird cage and bird (produced). There were also two sprigs covered with birdlime. Defendants admitted to him that they came into the country to have some sport, and catch a few Chaffinches.—Watson said he was only trying to see how the birds were caught. He had not caught any.

Defendants were ordered to pay the costs of the case (7s. each), and allowed a fortnight to do so.

PRIZE BIRDS SUFFOCATED BY GAS.

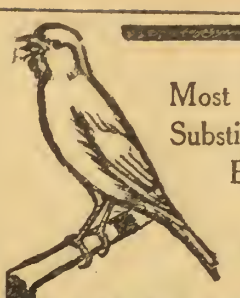
Shipley Fancier Recovers £16 Damages.

A claim for damages for the loss of thirteen Canaries formed the subject of an action brought in the Bradford County Court on April 19th, before His Honour Judge Graham, K.C.

The plaintiff was Henry Martin, of Marlborough Road, Shipley, wool salesman, who is also a breeder of Canaries, and the secretary of the Shipley O.S. The defendant was Charles Whitfield, plumber, Shipley, the claim being for £19 15s. Mr. Wilfrid Dunn appeared for the plaintiff, and Mr. J. Lee for the defendant.

Mr. Dunn stated that the plaintiff had occasion to engage the defendant for some work in his house, and gave him instructions to connect up some piping with a gas stove which was in the attic where he kept his Canaries. The defendant, instead of sending a man to do the work, sent his son, a youth of fourteen. The lad joined up the piping and lit the stove on the Thursday, and it was not interfered with, but was left burning continuously until Saturday morning.

When plaintiff went up to attic about a quarter to eight o'clock on Saturday morning he found the attic full of gas and thirteen out of his thirty Canaries were dead. They had been suffocated by the gas, and the remaining seventeen were so far gone that they could not stand. However, these seventeen birds recovered. Later he examined the stove and piping and found that one of the joints which the defendant's son had fitted up had become loose, allowing the gas to escape.



Speaking of the value of his Canaries, plaintiff stated that it had cost him £40 or £50 to get together the lot he had in the room. Speaking of well-bred Canaries generally he said he knew a man who had bought two for £18 10s., and another man who sold three for £20. Amongst the dead birds was one he would not have parted with for any money. He had shown it four times. It took a second prize at Windhill, a first at Shipley, then he sent it to Hull, where it did not meet with success, and later it went to Birmingham, where it took first prize, and special for the best bird in the show in the novice class.

Evidence as to the value of plaintiff's dead birds was given by Mr. Holroyd and Mr. Brayshaw, both of whom said they had had many years' experience in Canary breeding.

For the defence Mr. Lee contended that the joints of the piping had been properly fixed, and suggested that the joint which was afterwards found to be loose had been knocked.—Thomas Hill, plumber, Shipley, gave evidence as to how the joint might have become loose.

His Honour said he had no doubt about the case. The stove was burning all night on Friday, and was not touched until Saturday morning. In the interval something went wrong, and on Saturday morning the plaintiff found that there had been a leakage of gas. His Honour's opinion was that the joint had not been properly screwed in, and he therefore gave judgment for the plaintiff, assessing the damages at £16.—"Bradford Daily Telegraph."

Wild Bird Life.

The First Swallow.

With the change of wind to the south-west came many changes in the aspect of the countryside. Under the more genial conditions of sunshine and warm wind, a ramble across the fields and through quiet lanes was much more enjoyable and interesting than when cold easterly winds caused one to seek only sheltered walks. As we expected, the change brought the Swallow from the south. Our first sight of his darting presence was on the evening of April 8th, and another was seen on the outskirts of the village on the 10th. This is fairly early in these localities, as there are one or two favourite spots where they can be found some days before they reach our higher ground. Year after year I have noticed it is a single bird that we see first. This is rather curious when one considers how gregarious all the Swallows are. Not only do they flock together when hunting for food and previous to their autumn flight, but unlike many species, they nest in companies. One seldom sees a single Swallow's nest. There are generally others either under the same roof or very close handy.

The early morning and late evening bird chorus is now quite at its height. Long after sundown, when the Sparrows and Finches have retired for the night, the singing of the Blackbirds and Thrushes away up in the elms is almost deafening. The Thrush has lately considerably increased its tours; some of its present notes are certainly "extras" and are rendered with a rapidity and gusto never attained during the earlier months of the year; but the Blackbirds go on in the old sweet way with a mellowness and deliberation equalled by the song of no other species. The rushing song of the Thrush has no effect on him. One of the latter birds has a brood of healthy young ones in a corner of the park, and visits my garden at all hours of the day in quest of trifles for the babies. If I stroll down the park he watches me intently, and if my eye is on him he seeks shelter over the fence; but if I look straight ahead of me or past him, seemingly at some other object, he continues his search as though I was not there, hopping but a few paces away. In some instructive way wild creatures learn to distinguish when one is or is not intent upon them in a spirit of enmity, and if very near it is always the eye they watch. So long as you observe them from the corner of the eye, sideways or look over their heads at something beyond, it is well. Turn your glance full upon them to get a better view, and they instantly take wing and are gone.

Advertisements continued from page 385

MAINLY CANARIES—continued.

HIGH-class Yorkshires (Bailey's strain), sell 12/6 pair, not rubbish, or exchnnge scrap copper, brass, or anything useful: M. Cooper, 25, Taylor-st., Batley

PAIR Yorkshires, yellow cock, buff hen, 10/-; exchange flight, 50 to 60 long, 10in. wide; offers first; approval both ways; yellow and buff hen, 4/- each: Jebson, Commonend, Skelmanthorpe.

PARROTS AS PETS

ARE KEPT BY MANY,

but very few know how to feed and treat them properly.

To meet this want we have just published an up-to-date handbook on this highly interesting branch of bird keeping, entitled—

PARROTS FOR PLEASURE & PROFIT

By C. P. ARTHUR.

Price - - - 7d. post free.

This comprehensive and practical handbook deals with the keeping and feeding of the more widely kept varieties such as the Grey, the Amazon, etc. It explains fully how to sex these birds, the treatment of newly imported specimens, and cures for their various ills.

In this valuable brochure are also included articles entitled:

THE BREEDING OF HYBRID PARRAKEETS, By C. P. Arthur;

AN ACCOUNT OF SIX POPULAR PARROTS, By Frank Finn;

SOME FACTS ABOUT MACAWS, By Frank Finn.

Such value has never been equalled, so send for your copy immediately from—

The Publisher, "Cage Birds," 154, Fleet St., London, E.C.

LANCASTER'S ½-plate camera, tripod, canvas carrying case, and accessories, 25/-; exchange phonograph, useful offers: Nelson, 32, Ryland-st., Burnley.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bona-fides* of either buyers or sellers In all transactions the adoption of our Deposit System should be insistedupon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit. the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has not been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—6d. for the first sixteen words. One Halfpenny per Word for each word over sixteen. MINIMUM, 16 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first Sixteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines 6d., 9d., 1-, 1/6 according to size.

Small prepaid advertisements of a general nature and not connected in any way with the Cage Bird Trade are inserted at the rate of ½d. per word throughout. Minimum 12 words 6d.

Advertisements must in all cases bear the bona fide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Postal Orders must be sent as far as possible. All moneys should be made payable to E. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

Rings and Pedigree Books.

60,000 Sold Last Year.

Aluminium, round edges, embossed numbers, size of ring, with year on, or without, all made by myself, and not cheap, foreign rubbish; am maker to the Aberdeen University, supplying them by thousands for the smallest to the largest bird that migrates; being embossed, the numbers cannot fill with dirt, like all other makes of rings, which are sunk. "Cage Birds" says they are beautifully neat, small, and light, and easy to use; in fact, difficult to imagine anything better in marking rings. **No closed rings made: 6d.** doz., **2/6** half gross; stamp for samples. Pedigree Books **6d.** each.

SAM DRAKE, 31, Haley Hill, HALIFAX.

White Pottery Wholesale

COLCLOUGH & CO., Sutherland Works, Wharf St., Longton, Staffs.

Leading Makers of all kinds of Bird Fanciers' Utensils, Nest Pans, etc. Noted for Quality. Special Terms for fair orders.

SUPERIOR ALUMINIUM RINGS

METHODICAL BREEDERS should not omit to mark their birds with these high-grade rings; they are the lightest, neatest and most reliable made, yet inexpensive. The rims are perfectly round and smooth, and the numbers cannot fill with dirt. These are the reasons why they have been used and recommended for years by leading fanciers. "Cage Birds" says: "One of the best samples we have seen." 150 for 4/-, 100 for 2/9, 75 for 2/3, 50 for 1/6, 25 for 10d., post free, carefully packed. Consecutively numbered with or without year. Supplied with or without flanges. Give them a trial this season, and test their superiority for yourself. Breeding-room Registers, 7d. each, post free.

THERE ARE TIMES

When breeders of Canaries and Hybrids find it inconvenient to cook and mince up egg for their birds. We can help them, for our

EGBISCO

which is already cooked and sterilized, only requires dumping with cold water to make a reliable, efficient and genuine Egg and Biscuit Food, upon which the breeder may rely implicitly. Do not confound it with any other preparation on the market, for it resembles none of them in the least. Sold in 3d., 6d., and 1/- tins, by us, and all Corn and Bird Shops. It has been pronounced by publicly-recognised authorities to be by far the

MOST ACCEPTABLE FOOD

of its kind on the market.

One trial makes constant users.

A lecture reprinted from CAGE BIRDS, delivered by this leading judge and expert before the London and Provincial Ornithological Society, and pronounced by all experts to be a most valuable pamphlet; price, 1d., post free 1½d.: From the Publisher, CAGE BIRDS, 154, Fleet-st., London, E.C.

POWICK'S champion Norwich, large typical birds, the same strain as the winners at all the leading shows in all classes, cocks, 7/6, 10/6; hens, 5/6, 7/6 each; a few winners, 15/6 each; no rubbish; ten days' approval at my risk: Wm. Powick, Eastfield House, Dewsbury.

"CANARY Breeding for Beginners." By Claude St. John. An exceptionally helpful, intensely, practical, and instructive handbook for beginners and tyros at Canary breeding. It is profusely illustrated and contains innumerable hints helpful to all young bird-keepers; price, post free, 7d.; cloth bound, 1/2: From the Publisher, CAGE BIRDS, 154, Fleet Street, London, E.C.

WILLIAM JUDD, Midland Counties Aviaries, 120, Belgrave-gate, Leicester, the largest stores in the Midland counties, established over 30 years, high-class Norwich Canaries, cocks, in full song, 4/6, 5/6 orange yellows, 7/6 and 10/- each; good healthy hens for this year's breeding, 2/6, 3/6; orange yellows, 5/- and 7/6 each; pairs properly mated now ready for nesting, 7/6, 8/6, 10/6, and 15/- pair; carefully packed and every satisfaction guaranteed.

"BREEDING-room Register." Compiled by G. E. Weston. The stock book which makes bird-breeding easy. Everything that a cage-bird breeder needs to assist him in keeping his accounts is found in its pages. A large number of emergency hints are also given for the assistance of the fancier during the breeding season; price, post free, 7d.: From the Publisher, CAGE BIRDS, 154, Fleet Street, London, E.C.

Supreme VALUE My Forte.

The great value I offer is contained in all following varieties; this fact is proved beyond all doubt. Hence your attention to following prices and opinions is respectfully solicited:—

NORWICH PLAINHEADS.

Cocks.—Clear Yellow, 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, 30/-, upwards. Clear Buff, 6/-, 6/6, 8/6, 10/6, 12/6, 15/-, 20/-, upwards. Marked, 6/6, 6/6, 7/6, 10/6, 12/6, 15/-, upwards. Hens—Clear Yellow, 3/6, 4/-, 4/6, 6/-, 7/6, 10/6, 15/-, 20/-, 30/-. Clear Buff, 3/3, 4/-, 6/-, 7/6, 10/-, 15/-, 20/-. Marked, 3/-, 4/-, 5/-, 7/6, 10/-, 15/-. Pairs Norwich Plainheads, Matched for Breeding, 7/6, 8/6, 9/6. Travelling Cages, 3d. extra.

Wonderful Value for the Money.

Rock, Manor House, Carterton, Clanfield, Oxon, April 22nd, 1910,—The birds and cage have arrived safely, and are more than satisfactory. I think the cage is wonderful value for the money. A. L. Dickson to W. Rudd.

Sings Beautifully.

52, St. Leonard's Road, Windsor, Berks, April 21st, 1910,—Bird arrived quite safe, I am very pleased with him, he sings beautifully. Started singing as soon as we unpacked him. W. Davies to W. Rudd.

CRESTS AND CRESTEDBREDS.

A Huge Collection.—Crested cocks, 7/6, 8/6, 10/6, 15/-, 20/-, upwards. Crested hens, 6/6, 7/6, 10/6, 15/-, 20/-, upwards. Crested-bred cocks, 6/6, 7/6, 8/6, 10/6, 15/-, 20/-, 30/-. Crested-bred hens, 4/6, 8/6, 10/6, 15/-, 20/-, 30/-, upwards. Pairs matched for Crest breeding, 12/6, 15/-, 20/-, 30/-, 40/-, 60/-, 80/-, upwards.

Well Pleased.

40, Bridge End, Leeds, April 21st, 1910,—The three birds arrived safe this morning. Am well pleased. T. Dawson to W. Rudd.

Business Methods.

2, Heverham Road, Plumstead, Kent, April 20th, 1910,—The bird arrived this morning quite safe, and in good condition. I am very pleased with it. I thank you for your prompt attention and your straightforward business methods. W. J. Wingett to W. Rudd.

YORKSHIRES.

When I say Yorkshires, I mean it—not something with Feathers on merely, the breed of which would puzzle anyone to define.—Cocks, 6/6, 7/6, 8/6, 10/6, 16/-, 20/-, 30/-. Hens, 3/-, 3/6, 4/-, 4/6, 6/6, 7/6, 10/6, 15/-. Pairs matched for breeding, 8/6, 9/6, 10/6, 12/6, 15/-, 20/-, upwards. These birds possess length, type and quality, and have no equal elsewhere, at anything approaching similar prices.

Highly Satisfied.

Leashaw Villa, Holloway, near Whatstandwell, April 21st, 1910,—I received the pair of Yorkshires quite safe, and in excellent condition. I must say that I am highly satisfied with them. J. Limb to W. Rudd.

Really Great at Price.

26, Napier Place, Falkirk, N.B., April 22nd, 1910,—Yorkshire cock arrived all right, and is really great at the price. Considering the long journey, it was very bright, it being in full song from about ten minutes after leaving the travelling cage. After getting such a strong, healthy bird, I will have no hesitation in placing future orders in your hands. R. Walker to W. Rudd.

SONGSTERS. PAR EXCELLENCE.

These cannot be Touched Elsewhere for quality and value. Sing anywhere. Great attraction. Very handsome, hardy, pure bred Yorkshires or Norwich, 6/6, 7/6, 8/6, 10/6. Thousands to select from.

These must not be confounded as just an ordinary singing Canary; they are all specially and personally selected; birds that with ordinary care will not break down in song, but go right through the season.

Well Pleased.

157, Langlands Road, Govan, April 18th, 1910,—Bird arrived here all safe and in good condition. I am well pleased with it. D. Whitelaw to W. Rudd.

Sings Lovely.

2D, Peabody Buildings, Herbrand Street, London, W.C., April 19th, 1910,—I received the bird in good condition, and it sings lovely. I close with thanks. E. Nicholls to W. Rudd.

SPECIAL AMATEUR PAIRS.

My special matched pairs of prize-bred Norwich Plainheads at 10/6, 12/6, 15/-, and 20/-. Crested ditto, 15/-, 20/-, 25/-, and 30/-. Yorkshires, 10/6, 12/6, 15/-, and 20/-. Lancashires, 25/-, 30/-, 40/-. Cinnamons, 12/6, 15/-, 20/-. Lizards, 8/6, 10/6, 12/6, 15/-, 20/-. Border Fancies, 8/6, 10/6, 12/6.

Rest Assured, etc.

Assistant Controller's Office, G.P.O., London, E.C., April 11th, 1910,—The birds arrived safely, and in splendid condition. I am highly satisfied with them. Should I again want to purchase more birds, you may rest assured I shall not go elsewhere. H. G. Hagger to W. Rudd.

Could Not Get Same For Double the Amount.

7, Broom Street, Liverpool, April 21st, 1910,—The birds have arrived safe, and I am very pleased with them, also cage. I could not get the same here for double the amount. Many thanks for your selection. F. Minto to W. Rudd.

(Continued on next column.)

(Continued from previous column.)

THE NOVICE PAIRS.

If you cannot afford a big price, send for a pair of my correctly matched Norwich or Yorkshires at 8/6 or 9/6; and now note this.—In most cases where you send for pairs at this price, you are sent two buffs, often both marked birds—this is where you do not get what is required—well, I send you **one marked** and **one clear, one buff,** and **the other yellow.** Travelling cage 3d. extra. Then for 3/6 I will send you a Double Breeding Cage, fitted with everything complete, for an immediate start. Total for Birds and Cage, 12/3, for 8/6 birds, or 13/3 for 9/6 birds. But I would strongly recommend you to have my Cage No. 100; it has sand drawers, and is fitted with sanitary furniture throughout, and the price is only 5/- **(Five Shillings).**

More Than Pleased.

39, St. Mary's Street, Chippenham, April 21st, 1910,—The cage arrived quite safe this morning, and I am more than pleased with it. Thank you very much for your prompt attention. G. Perry to W. Rudd.

MULING HENS. FOR LIGHT OR DARK MULING.

Grand Sib hens, mostly clear buff, and of pink-eyed strain, 4/- and 5/- each. A few yellows, same strain, 6/6, 7/6. No dark blood in them. Light Mule breeding, 3/6, 4/6, 5/6.

Prompt Attention, etc.

24, Denton Road, Ferme Park, Hornsey, London, N., April 25th, 1910,—I received the two muling hens quite safe, and I am very pleased with them. Thanks very much for prompt attention. J. Rezin to W. Rudd.

BORDER FANCIES.

Cocks, 6/6, 7/6, 8/6, 10/6, upwards. Hens, 2/-, 3/-, 4/-.

IN STOCK.

High-class Dutch Frills, Scotch Fancies, Lancashires, Lizards, Cinnamons Hartz Mountain Roller hens, light and dark Mules, Hybrids, Muling Finches, Linnets etc

No Need of Approval With You.

40, Brindley Street, Newtown, April 21st, 1910,—I received the two hens, and am quite pleased with them. Many thanks for your straightforward way in dealing with me. There is no need of approval with you. H. Goode to W. Rudd.

Soon began Piping.

7, Trafalgar Road, Rochdale, April 23rd, 1910,—I received the Bullfinch safely this afternoon. It is a very good bird and very healthy. It had not been in its cage long before it began piping. Thanking you for having dealt so honourably with me. Miss Robinson to W. Rudd.

Every Satisfaction.

55, Bridge Street, Long Eaton, Notts, April 25th, 1910,—Received the Goldfinch and two warblers in good condition on Saturday, and they give every satisfaction. W. Gray to W. Rudd.

For full detailed Current Price List, send address on postcard. Travelling Cages, 3d. extra, on all above prices.

W. RUDD, THE Bird Specialist, NORWICH.

GEORGE Wright, 51, Silver-st., Norwich, for good large healthy Norwich Plainheads, cocks on full song 5/6, 7/6, upwards; pairs, 8/6, 10/6 upwards; yellow or buff hens, 3/6, 5/6, 7/6; all prize bred; approval.

REMEMBER I INVITE

YOU TO PAY A VISIT TO MY ROOMS ON ANY DAY BUT SUNDAY.

You will be always assured of a hearty Yorkshire welcome, and will not be asked to buy anything. Cars run at frequent intervals past my doors, from Halifax, and also from Bradford (via Queensbury).

I have thousands of high-class specimens in stock, in every variety of Canary or Mule. My rooms are all scrupulously clean and well ventilated, and the birds in the pink of health and condition. I use no artificial heat of any kind. I am always pleased to welcome fanciers from any quarter, who can prove for themselves that my Advertisements are absolutely true in every detail. If you cannot come, however, and are in need of any variety of Canary or Mule, or any requisites for the bird-room, don't forget to send a Post Card for my FREE illustrated catalogue and advice to breeders FREE.

EVERY FANCIER, whether able to come or not, receives the same honourable treatment and the same personal ATTENTION. I Submit a few Testimonials out of Hundreds Recently Received. Kindly note dates.

WORTH DOUBLE THE MONEY.

Vane Street, Wingate, April 22nd, 1910.—"Pair of Yorkshires arrived this morning in the pink of condition. I cannot thank you too highly for your splendid dealing. I think they are honestly worth double the money."—THOS. FARREN TO JOE THOMAS.

Sunderland, April 20th, 1910.—"I received my pairs of Yorkshires safely, and I think they are worth double the money. The cock had not been in the cage very long before it was singing."—HARRY CARR TO JOE THOMAS.

Claremont Road, Blackpool, April 21st, 1910.—"I received the bird alright, and I am highly pleased with it. Think it good value for the money, and it is in the pink of condition."—JAS. STIZAKER TO JOE THOMAS.

Darwen, April 16th, 1910.—"I am very pleased indeed with the Yorkshire Cocks. I don't know what other birds are like at much bigger price, but I know what this is in style and feather, compared with other birds at the price, and I am quite correct in saying, your Testimonials do not flatter you in reference to Quality of the birds you have sold and honest dealings."—W. D. BRUNSKILL TO JOE THOMAS.

Balcairn Villa, Inverness, April 20th, 1910.—"Birds arrived safe, and I am more than pleased with them."—PHILIP NOEL TO JOE THOMAS.

Rostherne Street, Seedley, April 20th, 1910.—"Birds arrived safe and they are a splendid pair."—S. STAFFORD TO JOE THOMAS.

Considerations of space only, prevent me from printing scores similar to above, all recently received.

Let me send you one or more on approval at my risk at any of the following prices:—

YORKSHIRES.—Champion stock or exhibition birds, guaranteed bred from the finest strains in the country; cocks, long, typical birds, 6/-, 7/6, 8/6, 10/6, 12/6, 15/-, 20/- upwards; hens, lengthy, racy birds, in beautiful feather, and ready for nesting, 4/-, 5/-, 6/-, 7/6, 8/6, 10/-, 12/6, 15/-, 20/- upwards; matched pairs, to breed own winners, 10/-, 12/6, 15/-, 20/-, 25/-, 30/-, 40/- upwards.

YORKSHIRE GREENS.—Cocks or hens, bred from this season's winners, in lovely plumage and condition 7/6, 10/-, 12/6, 15/-, 20/- each; matched pairs, 12/6, 15/-, 20/-, 25/-, 30/-, 40/- upwards.

NORWICH PLAINHEADS.—Some real gems, ready for immediate disposal, large, cobby birds, with good heads, round chests and short flights and tails, the correct sort to breed winners, at same prices as Yorkshires.

BOOKLET FREE.

Finest Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all time to send my Parrots on four week's trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among Grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

DE VON & CO., LTD.

GOULDIANS, GOULDIANS, GOULDIANS.

Still we hold the largest stock in England, and as we stated before, there will be no more Gouldians to arrive. Mr. Le'Bon, the Australian trapper, has arrived on the Continent, and sold his birds to foreign traders. Mr. Foagler arrived in London on Wednesday, April 20th. We had the first refusal of his catch, amongst which were three Princess of Wales' Parrakeets. We bid for his stock, and did not get it on account of a difference of £10, therefore, it was chopped up and sold in fragments to smaller dealers; the 900 pairs of Zebrafinches were bought by a German dealer. We were not very anxious to buy, on account of our Mr. Saffin having to arrive by the N.D.L. cargo boat, "Schwaben," which left Australia on the 14th of March, and due in Antwerp, April 27th, with 4,000 pairs Budgerigars, 8,000 pairs Zebrafinches, besides a host of rare Parrots and other birds. Our Manager will meet the boat on its arrival. In our next list we shall be pleased to offer our importation for sale to naturalists, bird dealers, and others, who once were dealers.—De Von and Co., Ltd., Bird Dealers, 114, Bethnal Green Road, London.

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all Parrot buyers. Full details of our original system of selling Parrots on four weeks' trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard. Telephone No. 40 Morecambe.

PARROT AVIARIES, MORECAMBE.

B. HOLLINS

Foreign Bird Importer, HULL.

Largest stock of small foreign birds in the country. Member of the Foreign Bird Club Patronized by Royalty. Full list sent free on application. Birds too numerous to mention. Large consignment just arrived.

WILLSONS

Send for list of rare Foreign birds.

37, NEW ALFORD STREET, LONDON, W.C.

REMEMBER,

I am not a bird dealer. I have bred thousands of Budgerigars. I sell nothing but husks, and have wired and sold more than any other man living. To breed Budgerigars successfully you must employ my "Improved Secure" husks. All bird fancying papers have advised their readers to prefer them because other kinds come to pieces and the young birds fall to the floor and die. This is why the "Improved Secure" husks have remained first favourite for the past 19 years. They remain unequalled, competition and comparison have always increased their popularity. All the principal Zoo's, Parks, and largest breeders employ them. "Exchange and Mart" has said:—You had better have the improved form; even if it is a little dearer than the old-fashioned sort, it is cheaper in the long run. Again, "Cage Birds" tells a correspondent:—"They are far superior to the old husks," so beware of worthless substitutes. Splendid consignment just arrived, price 5/- dozen, smaller quantities 6d. each. Superior box nests for Cockatiels 1/6 each.

HARPER, Husk Importer, Wolverhampton.

JOHN D. HAMLYN,

221, St. Georges Street, London Docks.

Arrival of Australian Birds.

Mr. J. A. Foglia, of Australia, arrived on the 21st inst., on the ss. "Geelong," with a very interesting collection of birds, including Budgerigars, Zebras, Roses, Red Collared Blue Mountains, Redrumps, Cockatiels, Bustards, Curlews, Cereopeis Geese, and last, but not least, three Princess of Wales' Parrakeets. My purchases were 1,600 pairs Budgerigars, 75 Roses, two Bustards, two Curlews, four Geese, and the three Parrakeets, the remainder of stock being acquired by a German dealer for Bremen. The three Princess of Wales' Parrakeets were immediately sold to a celebrated fancier at a high price. It is now some time since these very rare birds arrived in Great Britain, the last pair, I believe, were sold for £50.

AUSTRALIAN SHELL PARROTS or BUDGERIGARS.

Already 750 pairs sold in two days, the remainder are offered at the following prices as long as they last; cash with order only:—

One pair for 4/-, including package.
Six pairs for 18/-, including package.
Twelve pairs for 33/-, including package.
Fifty pairs for 125/-, including package.
Twelve cocks for 18/-, including package.

NOTICE.

Amongst such a large number there must be a few rough ones, which, if turned out in open aviaries, soon recover themselves; these we offer as follows: **Twelve for 12/6.** To avoid useless correspondence, kindly note—The birds will only be sold in above quantities and prices, and, despite any statements to the contrary, I am the only wholesale holder of imported Australian Budgerigars in Great Britain.

Early Application Requested.

JOHN D. HAMLYN

(Continued).

Notwithstanding other inflated advertisements, I most respectfully beg to state that Mr. Le Bon has also arrived with a grand selection of Australian stock, including Gouldian and other Finches. There is still another dealer to arrive from Australia with Gouldians in middle of May, there are also arrivals at Marseilles. I beg now to offer:—

84 Long-tailed Grassfinches at 6/- each.
40 Masked Grassfinches at 6/- each.
59 Ruficauda Finches at 6/- each.
4 Chestnut Finches at 5/- each.
17 Yellow Rumped Finches at 7/6 each.
3 Crimson Finches at 12/6 each.
93 Black Gouldians at 5/6 each.
15 Red Gouldians at 10/6 each.

Kindly note, these birds have been brought over on deck. I have no furnace in my shop, where the poor, unfortunate birds are baked, no monkeys or tortoises are kept with these Finches. Cleanliness with fresh air treatment is thoroughly studied at **221, St. George's Street, London Docks.**

(Above stock offered subject to being unsold).

Singing Contests.

NEWSHAM.

Contest held April 16th, when 26 birds sang. Result: 1, 2, 3, Wake. Judge, Mr. Herron. A club sing will be held on April 30th at Miner's Arms.—S. LAWS, Sec.

LEEDS.

Usual weekly contest held at Skinner's Arms, Buslingthorpe Lane, when the best of singing this season was heard; 17 birds were hung, and every bird sang. 1 and 3, Green; 2, Ward. Judges, Messrs. Grainger and Pease.

Usual quality contest, held April 23, at King's Head, Shannon Street, when 18 birds faced the judges, Messrs. Jennings, Naylor, and Hayes. 1, Sissons; 2 and 3 shared between Madden and Hardcastle. Also on April 24, when 30 birds were staged. 1, Bland; 2, Stead; 3, Richardson; 4, Wigfield. Judges, Messrs. Jennings, Wilson and Walter Naylor.—WILSON NAYLOR, Hon. Sec.

NEWTOWN (Leeds).

Result of Quality Singing Linnet Contest, held at Plasterers' Arms, Skinner Lane, April 23: 1, Soloman; 2, 3, J. Green. Judges, C. Lorriman and G. Towers. Result of usual time singing contest, held above house, April 24: 1, Hargreaves; 2, Nobler; 3, Rennie. Timekeepers, Messrs. J. Hargreaves and A. Bryan. Next quality contest, April 30, commence 3 o'clock.—JOE HARGREAVES, Hon. Sec.

Usual quality singing contest, held at Prince Albert Hotel, on April 24, when 14 birds sang for three prizes Result: 1, Butler; 2, Soloman; 3, Sellars. Messrs. J. Smith and Nevins officiated as judges. Timekeeper, G. Towers.—A. TURNER, Hon. Sec.

LEIGH.

Open Linnet contest, held at Grapes Inn, when 17 birds competed for four prizes for quality and time; Judge, Mr. F. Gibbins; timers, Messrs. P. Thorpe and J. Cavanagh. Result for quality: 1, J. W. Jones (Leigh); 2, W. Barnes (Wigan). Time: 1, P. O'Neil (Leigh), 56secs.; 2, J. Gore (Leigh), 46secs. There was some good quality singing. After the contest we spent the rest of the evening in songs from some of the fanciers.—J. W. JONES.

GLASSHOUGHTON.

Open sing held at Aire and Calder, Castleford, on April 24, when 17 birds faced the judges. 1, S. Scott, 38secs.; 2, A. Longfield, 33secs.; dead-heat for 3rd place between J. Higgins and A. Longfield, when J. Higgins got third.—R. TAYLOR, Secretary.

SHEFFIELD.

Royds Inn Linnet S.S., held at J. Dellamore's, Abercliffe-road, their weekly contest, on April 23rd, when eight birds faced the timekeepers. Driver, 40; Little Jack, 32; Little Jack, 30; Driver, 29; Herbert, 24; Herbert, 18. April 24th, contest, 12 birds sang. Palfreman, 82; Palfreman, 82; Herbert, 75; Little Jack, 56; Little Jack, 31; Palfreman, 20; Little Jack, 14. Also a variety show, on April 24th, when 10 birds faced the judges. Smith (Goldfinch), 1; Watson (Chaffinch), 2; Watson (Greenfinch), 3. Judge, Mr. Welborn. Mr. Dallamore will give five pounds to the club, and extra special prize for the winner, also a variety show on May 1st. A challenge—Mr. A. Palfreman, No. 34, Joiner-lane, Wicker, Sheffield, will sing any Linnet in England. Time singing, two minuets, sing one minute faced, one minute bluff, for £1 up to £10. Home and home match, can be made any time at Royds Inn.—H. WOODCOCK, Sec.

CROOK.

Canary singing contest, May 7, at Ye Royal Oak. Prizes: 1st, 8/-; 2nd, 4/-; 3rd, 2/-; 4th, 1/-. Entrance fee, 6d. bird, half returned in refreshments. First bird on nail at 2.30. Judge, Mr. J. Bright; timekeeper, J. Rutherford; bookkeeper and secretary, Mr. W. Rutherford, West Roddymoor.

YORK.

Usual weekly Linnet singing contest, held at Crown Inn, North-street, when upwards of 20 birds competed. Result: 1st, Smith; 2nd, Granger; 3rd, Lee; 4th, Wilson. Judge, Mr. W. Perry; timekeeper, J. Smith.

Usual weekly Linnet singing contest held at Bricklayers' Arms, Palmer-lane, Hungate, on April 23rd, when 22 birds entered for competition. Result: 1, Oldroyd; 2, Storey; 3, Sam; 4, Empson; 5, Limbert. Mr. J. Andrews officiated as judge. Mr. J. Limbert, sen., as timekeeper.—WM. EMPSOM.

CITY OF GLASGOW.

Singing contest held at Mr. Andrew Muir's, Saltmarket, on 23rd April; judge, Mr. A. Moffat. Twelve birds competed. Result: 1, Ross; 2, Grabam; 3, Rough.—A. McCallum, Sec.

WARRINGTON.

Open contest of Warrington L.S.A., held at Mersey Hotel, Mersey Street, when some good time singing was heard, although there was only a poor entry; 12 birds sang for two prizes. Result: 1, J. Matber, 161; 2, J. Wych, 114; judges, T. Staham and W. Mather; timekeeper, G. Molyneaux. An open contest will be held at the above house on May 7th, 1s. entrance fee. If Warrington Linnet fanciers want this to be a success they will have to turn up better.—C. CORBETT, Sec.

CASTLEFORD.

Usual Linnet sing, held at Britannia Inn, Lock Lane, on April 23, when 20 birds sang, there being a record attendance. The birds gave a very good account of themselves. Result: 1, Longfield; 2, Dohson; 3, Scott. On May 7 we shall have an open sing, and we are hoping to have a record entry. I trust members will bring their birds, and get as many friends to do the same, as possible. We have also a special contest on Whit-Saturday, when there will be three or four special prizes and entrance money added. Hoping this will catch the eye of some non-members.—WALTER DOBSON, Sec.

BLACKBURN.

On April 16 we had our first members' contest for quality, when 22 birds faced the board. Result:—1, Lilford (Leigh); 2, Topping (Blackburn); 3, Bentley (Great Harwood); 4, Dobson (Blackburn); 5, W. H. Topping (Blackburn), and 6, W. Barnes (Atherton). Judges, Messrs J. Dobson and R. Leeming; referee, Mr. E. Christopherson; timekeeper, Mr. R. Fender. Usual week-end contest held last week, when 13 birds entered. Result: 1, 3, W. H. Topping; 2, R. Leeming. Judge, Mr. J. James (Bolton); timekeeper, Mr. J. Cardwal (Blackburn). I forgot to post the above results in time for last issue, and trust members will accept this explanation of the non-appearance of the report.—T. SLATER, Sec.

I was very much surprised when I received my CAGE BIRDS of April 23rd to find my young clear cap gold Lizard depicted on the front page. I thank you very much for the honour you have bestowed on one of my birds, more so as the honour was entirely unexpected. I might say that the bird depicted was bred by me from the clear cap gold cock that in 1908 won 1st and special at South Shields, 3rd at Wallsend, 3rd at Sunderland, and 1st at Sunderland (members'), only times shown, and a broken cap silver hen. These two were also bred by myself, and in this respect I might say that during my exhibiting career of 11 or 12 years I have never yet shown a bird, either Norwich or Lizard, that I did not breed myself. The young gold cock has only been exhibited twice during the past show season—at Wallsend, where he stood h.c., and at Sunderland, where he won 1st and special in both open and members'. He is now paired with a clear cap silver hen bred from my old champion silver cock, winner of several 1sts, specials, 2nds, etc., and a non-cap gold hen. This pair also bred the young clear cap gold cock that won 2nd at Wallsend, 2nd Sunderland (open), and 1st members', later on securing the coveted 1st and special. I am glad to say that there is a decided increase in the number of breeders of the variety in this district, and it is to be hoped that with the advent of the new Lizard Club the variety may become even more popular. During the past season I have disposed of several of my old winners, including the gold cock 1st Shields, and the silver cock 1st Wallsend, 1908. I wish CAGE BIRDS every success.—W. REID (Sunderland).

CLUB & SOCIETY NOTICES

One notice of any forthcoming Society meeting inserted free. It should reach us not later than Tuesday morning's post. Specially printed Club Notice Postcards may be had free on application to our Manager. Secretaries should always use them.

Ashton-under-Lyne O.S.—May 3rd, P.S.A. Rooms, 8. Demonstration on cage making, by Mr. H. Kelsall; fanciers and friends invited.—H. Foden.

The Shows.

CITY OF GLASGOW S.C.

Usual weekly show held 21st April. In the absence of Mr. J. Dunlop, Mr. Nicholson, of Newcastle, judged, and his awards gave thorough satisfaction.

LINNET: 1, Cochran, fine size and col; 2, Marr, good col. and pencilling; 3, Jamieson, with good moult should be near the top next season. BRAMBLEFINCH, ETC.: 1, McGavin, grand shapely Bramble, extra large; 2, 3, Raine, 2nd Chaffinch, big one, 3rd Bramble. BUNTING: 1, Raine, fine Snowhunting, good size, cl. in col.; 2, Watson, Yellowhammer, very distinct V markings, good col; 3, Craig, Cirl Bunting, in tip-top order. Next show, 5th May. Classes: Linnet, Goldfinch, and Greenfinch.—A. McCULLUM, Sec.

LONDON AND PROVINCIAL O.S.

A members' table show of British birds, Mules, and Foreign birds was held on April 21st, Mr. Maxwell judging. There was a good attendance, and the meeting closed with a vote of thanks to Mr. Maxwell for judging.

GOLDFINCH (3): 1, 2, Mortlock, two good Finches. LINNET (1): 1, Mortlock. A.O.S. (6): 1, Oldaker, fine Bullfinch; 2, Gilbert. LIGHT MULES (6): 1, W. H. Howe, yell. variegated. Goldfinch-Can.; 2, W. H. Howe, another Goldie-Can., a huff, two grand birds; vhc, Mortlock; hc, Thurling. DARK (7): 1, Ramsden, fine Linnet-Can.; 2, Crabb, well-known Siskin-Can.; 3, Hawes, Goldfinch-Can.; vhc, Thurling. HYB. (2): 1, Ramsden, smart Redpoll-Greenfinch. FOR. (2): 1, Mrs. Leslie Miller, P. Sugarbird; this and Mrs. Leslie Miller's other exhibit, a Flycatcher, were well shown and much admired.

DULWICH AND PECKHAM C.B.S.

A well-attended table show of British birds, Mules, and Hybrids was held at headquarters, the Reindeer Hotel, Rye Lane, Peckham, on April 19th. Although the show was not big in numbers, the quality of the exhibits was far and away before that of any previous veuture, resulting in very keen competition, especially between the two keen champion members, Messrs. C. Botting and Graham. The former staged a beautiful team of Twites, all in excellent fettle. The Goldie or Bullie class was one which any society might be proud of. The A.O.S. brought out one or two interesting exhibits. The Yellowhammer put down by Mr. Graham is a perfect treasure. The insectivorous class resulted in only a first and last word for a clinking young Redstart not yet in breeding plumage. Mules brought out only three specimens, but we are assured of a much bigger and better class in the near future. Mr. E. S. Lugg placed the cards, and made a few well-chosen remarks on the awards. He seemed to give satisfaction. The worthy secretary (Mr. W. Hodson), with the help of a sound committee, had everything in Al order.

GOLDIE,- ETC. (7): 1, Botting, good all-round Goldfinch, square blaze, good buttons and moons; 2, Graham, better moons, not quite so good in buttons as winner, perhaps; 3, Mrs. Madewell, nice compact Bullfinch, well-defined cap, good breast col., in capital trim; 4, Freeman, very nice Goldie; vhc, Baker; hc, Mrs. Madewell; c, Johnson. LINNET, ETC. (7): Very hot lot: 1, 3, c, Botting, rattling good team, 1st well-known winning Twite, 3rd Siskin, in good trim, nice cap and bib, would not show himself, c Twite; 2, Graham, very nice Twite, tight race, here size tells a tale; 4, vhc, hc, Freeman, model of a Redpoll, nice Twite, wants another moult, and a Redpoll; the whole lot were in perfect condition. GREENFINCH, ETC. (4): 1, Botting, picture of a Bramble, good rowings, in excellent col., shows to perfection; 2, Graham, Greenfinch, not one of the biggest, but all there for col. and condition; 3, vhc, Freeman, Greenfinch and Chaffinch. A.O.S. HARDBILL: 1, Graham, one of the best Yellowhammers travelling the London show benches, sound throughout; 2, 3, Botting, Hawfinch and Yellowhammer, former good bib and col., the latter not quite "up to snuff"; vhc, Freeman, Crossbill, bit wild, will score after another moult. INSECTIV.: 1, Botting, Redstart. MULES AND HYB. (3): 1, 2, Baker, Goldie-Can., dark, nice size, Greenfinch-Can., fine exhibit; 3, Mrs. Madewell, small variegated. Goldie-Can.

Club Reports.

EDINBURGH SOUTHERN O.S.

Monthly meeting held in Buchanan's Hotel, High-street, Mr. C. R. Drysdale in the chair. After a discussion it was decided to hold our show on the 15th October, and Mr. Cook was elected judge for the Scotch Fancy section, and Mr. Smeaton for Any Other Variety section. It was also decided to add six classes for old birds. We then enrolled five new members—Messrs. M. Binning, G. Farrington, A. Dunsmore, G. G. Telford, and J. McKearn. The booking of hens was then taken, which closed the meeting with a distribution of Spratt's Patent Food.—A. HEWITT, Sec.

KILSYTH F.A.

Meeting held on 20th April, Mr. A. Hardie presiding over a large attendance. After discussion it was agreed to hold an open cage bird show on 10th December, and preliminary arrangements were made as to judges and classifications. Mr. W. Irvine was elected president; Mr. A. Hardie, vice-president; Mr. J. Brown, treasurer; and Mr. A. D. Duncan, "Chronicle" office, Kilsyth, secretary, with an influential executive. It was unanimously resolved to authorise the Secretary to guarantee advertisements in CAGE BIRDS so as to have the fixture duly advertised. Next meeting was fixed for 4th May, at 7.45 p.m.—A. D. DUNCAN, Sec.

BORDER CITY (Carlisle) O.S.

The inaugural ramble of the season took place on April 24th, when the following members were present: Messrs. McDonald, J. Little, J. Chaplow, R. Macartney, T. Holmes, T. J. Robson, Jos. Robson, W. Dixon, W. Davidson, J. Graham, A. Sewell, G. Davidson and J. C. Bell. The weather was fine at the start, a strong breeze blowing when we left headquarters, and made our way through Currock. Near the town very few nests were seen; most of what we found had been tampered with, I should say by boys. Nearing Durdar we left the main road, and got into a bye-lane, where we were soon rewarded in finding nests. We noticed particularly the diversity of Blackbird's nesting places. The first we found, containing 4 eggs, was fully 12 feet up on the fork of a tree; the next, containing young, on the top of a bank; and the third on a bank side with five eggs. We here also had the pleasure of seeing a nest, containing five strong, healthy young Robins, well hidden by dry grass. Right at the base of a tree a fully finished nest of the Wren was found, while not far out, looking cheekily out of a hole in the bank, sat a Robin on her nest; but she was not to be disturbed by our looks. The foliage was well forward for the time of year, and the blossoms of the primrose, wild violet, and cherry were greatly admired. A couple of Thrush's nests, each containing one egg, were found. A sharp shower brought us to a halt near a farmhouse, and while here we noticed a number of Crows feeding their young. We had not long to rest. The sun came out again, and we set off and were delighted with grand bursts of song from the Skylarks, Chaffinches, Thrushes, and others. Nearing Unthank we found a couple of Yellowhammers' nest, and also a Chaffinch's with four eggs. A large flock of Fieldfares were feeding in a field near the roadside, and we thought this late to find same here now, but put it down to the cold nights we were experiencing hereabouts. The ragged nest of the Missel-thrush next attracted our attention, and just before coming to Dalston two Robins, one with five young, and the other with 5 eggs, were seen. Calling at Dalston we had refreshments, and then set off again to Carlisle, following the River Caldew. Another heavy shower made us hurry along, as there was no shelter for us. Passing Cummersdale, we saw a couple of Wagtails and several Swifts, hovering over the water. We landed in the Border City about seven o'clock, having thoroughly enjoyed the first outing of the season.—"JUST COME BACK."

KELTY AND BLAIRADAM C.B.A.

Monthly meeting held at headquarters on 19th April, Mr. J. Stenhouse (President) in the chair. There was a large muster of fanciers. Financial statement was reckoned far better than those of previous years. It was intimated that the City of Glasgow had taken our show date, but we decided to keep our date. The club show will be held on the first Saturday in September. It was also agreed that instead of competing for members' specials at the open show, same be competed for at club show. The final arrangements for the ramble being settled, it was decided to award a gold medal for best essay on same. The following new members were admitted, viz., Messrs. Pratt (Kingseat) and J. McLeod (Kelty). After much discussion it was agreed to award all club show specials by ballot, this bringing a very interesting meeting to a close.—JOHN FORD, Sec.

CARDIFF C.B.S.

General meeting, held on April 21st, at headquarters, Inskells, Queen Street, where quite a nice number turned up. I wish to thank members for their attendance. Mr. Varcoe, of Conway Road, was made a member; this makes a total of six new members since March. Now, members, bring some more along for next meeting, May 18th. After the usual business, Mr. W. Sampson, late secretary, was asked to give his report of the Cage Bird Union meeting of delegates, held at Swansea. After hearing what passed, it was decided to let the matter of our withdrawing from the Union lie on the table for further consideration at our next meeting. This concluded the business. The chairman then called on our worthy friend, Mr. H. C. Smith, to read his paper on the Yorkshire, which was very interesting, and was listened to with great attention. Questions were asked and answered. All present enjoyed Mr. Smith's paper, I am sure. Next meeting, paper by Mr. Thorne, on "Foreign Birds I have kept and their treatment."—J. W. DUMMETT, Sec.

GATESHEAD AND DIS. C.B.S.

Meeting held April 13th. Proposed and seconded that the minutes relating to the passing of the balance-sheet be rescinded, as several members had not received a copy of same; carried. The question of secretary was then discussed, and Mr. T. Taylor was pressed to again take that position, and as no one else would come forward he finally gave his consent to again take the helm, which was greeted with general applause. Mr. Holden, 35, Rodsley-avenue, very kindly consented to act as assistant secretary, and this also met the full approval of the meeting. The following new members were elected: Messrs. Lamb, H. Wellsbury, J. Liddle, and Mr. Easthope, all of Gateshead; Messrs. J. Davidson and Misses Hollet, both Low Fell. The judges for our annual show, to be held on December 9th and 10th, were then elected, it being left to the committee to decide for their final adoption after the Secretary had written them. Will members kindly send on their subscriptions to me at 68, Edward-st., or to Mr. Holden, 35, Rodsley-avenue? Balance-sheets will be posted immediately, and we shall be glad to hear of intending members. I have no doubt the committee will extend the time of joining under the circumstances.—THOS. TAYLOR, Hon. Sec.

WESTERN COUNTIES O.S.

Monthly general meeting held April 18, when a good attendance of 50 listened to a lecture on the Yorkshire Canary, by Mr. C. A. Read. This lecture was the third for the year that the society has arranged for its members, Mr. T. Pope having given a paper on "Double Buffing in Norwich Plainheads," in February, and Mr. C. Hoar on "Crests," in March. It is very gratifying to be able to chronicle these events as the W.C.O.S. has been very backward in this respect in past years. The following programme for the remainder of the year was announced, viz.: May 17, Paper on "Hybrid Breeding." Mr. R. Browning; May 18, Nest Feather Breeding." Mr. R. Browning; May 18, Nest Feather Show; June 20, Paper on "Colour Feeding and Breeding Norwich Plainheads." Mr. Border; June 22, Nest Feather Show; July 18, "Moulting of British Birds for Exhibition," Mr. Clark; July 20, Nest Feather Show; August 15, "Member's Experiences During Breeding Season"; Sept. 19, Washing Competition; Oct. 10, Arrangements for Open Show; Nov. 21, Show Statement; Dec. 12, Pair Show. Mr. Read, in his lecture, having given the S.Y.C.C. standard, and stating his agreement with same, emphasised his approval of the standard length of 6¾ins., also that browing is a grievous fault. The Yorkshire should always be smiling, like his owner, and never show a frown." The lecturer advised beginners to buy of a well-established strain, the best he can afford, and then to endeavour to reach the standard of excellence required for the show bench, which he supposed was the ultimate aim of all. Mr. Read advised the pairing of clear to marked birds of opposite sex, thereby keeping up size and length. In using Cinnamon-marked birds there is a tendency to get light colour, but feather will greatly benefit. In the subsequent discussion, Mr. Pope thought that colour would not suffer by using Cinnamon marks; Mr. Read replying that his experience went all the other way, and W. Spillman mentioned a case of this year's breeding by a Plymouth fancier where youngsters from two Cinnamon marked birds were very pale in colour. Mr. J. Rowe asked if the lecturer ever double-buffed Yorkshires, and suggested that the necks of the birds would be fuller.—Mr. Read said he did not advise this course; he much preferred the orthodox method of yellow to buff, but should rather double-yellow Yorkshires than double-buff. The Chairman, Mr. C. Dart, proposed and Mr. C. Hoar seconded, a vote of thanks to Mr. Read, who suitably replied.—THOS. POPE, Hon. Sec.

OPEN NORWICH P.C.

Result of ballot, re Committee:—Messrs. A. H. Waters (vice) 47 votes, A. Haigh 42, H. W. Battye 41, J. Wilcock 39, F. Hammond 38, R. Halliday 36, H. Snowden 33, A. Grey 32, D. Sunderland 32, — Harland 31, — Pickles 28, D. Hunter 27, W. Foxall 24, S. Dean 23, Spencer 23, Thackray 22, Shackleton 22, Pickering 21, and Brown 21. Ties for next place, Messrs. Chittenden 20, Cowgill 20, Jeffreys 20, and Moorbouse 20.—O. MITCHELL, Hon. Sec.

LOCHORE AND GLENCRAIG F.A.

Meeting held in public hall, Mr. D. McAulay in the chair. Office bearers for ensuing year were elected: President, Mr. G. Thompson; vice-president, Mr. D. McAulay; treasurer, Mr. J. McGalloway; assistant sec., Mr. R. Robertson; auditors, Messrs. J. Philip and J. Gibson; sec., John Brown, 89, North Glencraig. The date for open show was fixed for December 3rd. Messrs. J. W. Bruce (Coldstream) and J. A. Ferguson (Glasgow) were accepted as judges for same. It was agreed to have a drive to Newburgh on June 6th.—JOHN BROWN, sec.

SHETTLESTON & DIST. C.B.S.

Usual monthly meeting held in Houston's Restaurant on April 9th, Mr. Marr presiding over a good turn-out of members. We have fixed our date of show to be held on December 10th. Mr. Marr suggested that we have a ramble on the last Saturday of May. The two places suggested were Loch Winnock and Rouken Glen, to be decided on at our next meeting, May 14th. Fanciers in the district wishing to join us can have full particulars from me.—ANDREW BERRY, Sec., 36, Balgair-terrace, Shettleston.

WALLSEND & MID-TYNE C.B.S.

Monthly meeting held in Station Hotel on April 13th. It was decided to have our next feather show on July 2nd in the Station Hotel, Mr. T. Robson (Newcastle) to judge. There will be 15 Canary, 2 Mule, and 6 British Bird classes. After a deal of discussion on the Cage Bird Union, it was decided to place the matter on the agenda for our next meeting to be voted on. After deciding that 0d. per entry be the fee four our annual show, it was decided to leave it to the committee to arrange a schedule and lay it before members at next meeting. This ended a very enjoyable meeting.—JOHN R. EVANS, Sec.

QUEEN'S PARK AND DIS. C.B.A.

At the meeting held on April 14th, Mr. J. Dewhurst gave members and friends a lecture on British Birds. The attendance was not quite up to expectation, but the absentees were the losers, and those present spent a most pleasant and instructive evening, and carried home some useful information. The lecturer was quite at home with his subject, and gave some interesting facts as to the habits of birds, how to feed and keep the different species; and as the lecturer makes this branch his particular hobby, his remarks were closely followed and noted. A number of questions were asked and answered, and a pleasant evening came to a close only too soon. A very hearty vote of thanks to Mr. Dewhurst was suitably responded to with a promise of a continuation at a later date. —J. C. BIRCH, Sec.

BRIGHTON C.B.A.

Committee meeting held April 13th at King and Queen Hotel, Marlborough-place. Present: Mr. C. Pearson (in the chair), Messrs. France, Flook, Bicknell, W. H. Gibb, H. T. Gibb, Roast, Dandridge, Burtenshaw, Pinyon, Absalom, and A. T. Riddles (hon. sec.). The young stock show was fixed for June 29th; judge, Mr. W. Swaysland. Classes: Nor. 4, Yorks. 4, C.B. 1, Crest 1, Bord. 2, A.O.V. 1, Mules or Hyb. 1, Brit. 5, For. 1. We hope to make this our first show a qualified success, as we are hoping to put up a special for every class in addition to prize money, which will be the whole of the entry fees less 6d. each class towards expenses. Any fanciers wishing to join us in time to show at this exhibition may do so if they will kindly send on their names at once to me at 29, Inwood-crescent. We have arranged a table show and judging competition for May 11th; final judge, Mr. Burtenshaw. Classes: 1 Yorkies, 1 Nor., 1, Brit., after which Mr. Burtenshaw is going to read a paper with illustrations on the correct way to hold a bird for washing. This is also to be a general meeting to arrange annual show date and judge, so we hope all members will be present at 8.15 p.m. We elected three more new members.—A. T. RIDDLES, Hon. Sec.

NOTTINGHAM AND NOTTS O.S.

At last meeting a washing competition for beginners was held. The competition was not very keen, three only trying their hand. Mr. R. Rhodes (President) kindly gave the first and second prizes. The competitors were: Mr. A. Athey, first prize, his bird coming out clean and as straight as possible; Mr. Saywell, second prize; Mr. Henshaw, third prize. Both the latter gentlemen seemed a little nervous in handling the birds, which showed a frill at back of head. Messrs. J. Bertie and T. Barker were asked to give their decision, and to place the birds, which they did. Before the competition, Messrs. Bertie and Barker gave an exhibition of washing, each gentleman washing one bird. The birds certainly looked as though a wash would do them good. I believe someone said they had gone through a special process; they looked much like it. It looked as though the birds had been enamelled instead of the cage fronts. Mr. Bertie put the bird through its different positions in the hand while dry. Then the bird was plunged up to the neck in suds for a time, to allow the suds to get well into the feathers before the brush was used, and as soon as the brush was applied, what a difference. Mr. Bertie also explained how necessary it was to dry the bird well before putting it into the drying cage. It is hardly necessary to say that both Messrs. Bertie and Barker are old hands at the job. These two old fanciers first met and made acquaintance some 35 years ago at a local show held in this town, and the acquaintance and friendship still exists. While the birds were drying a discussion took place as to the best method of drying, Mr. Bertie explaining that he was in favour of using a little steam in the drying cage by damping the flannel with hot water before being put on to the hot water tank in cage. He thought the steam had a much better effect upon the feather than if the bird were left to be dried by the hot fire alone. Mr. R. Rhodes suggested a perforated water tank so as to allow the steam to come through the flannel. This was thought to be a good idea, provided too much did not come through at once. If it was so arranged to allow a little steam to come through gradually, Mr. Bertie thought it a capital idea, and he himself would try it. The meeting was then brought to a close with a hearty vote of thanks to Messrs. Bertie and Barker.—ONE WHO WAS PRESENT.

Nests of birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

HALSTEAD AND DISTRICT C.B.S.

Meeting held in the Co-operative Rooms, on April 18th, Mr. Stammers in the chair. After the usual business, a table show of Goldfinches was judged by Mr. G. Laurence, who afterwards opened a discussion on same, in which a good number of fanciers took part. A hearty vote of thanks was accorded to Mr. Laurence, to which he suitably replied, bringing a very enjoyable evening to a close.—W. F. MONK, Hon. Sec.

CAMBRIDGE C.B.S.

Annual dinner held at Ye Olde Castle Hotel on April 11th. There was a good attendance, the company numbering between 40 and 50. Mr. Edwards proposed the health of the chairman (Mr. Brooks) and the vice-chairman (Mr. Doggett), remarking on the splendid work they had done for the society "The Hon. Secretary" was given by Mr. Doggett in felicitous terms, and Mr. T. S. Moore suitably responded. Songs were contributed during the evening by Messrs. Andrews, Moore, Dean, Evans, Cousins, and Lambert. Mr. Leach gave a mandolins solo, and Mr. Whale ably presided at the piano.—McQUARRIE.

FIFE & KINROSS NORWICH P.C.

Meeting held in Penman's Masonic Arms, Cowdenbeath, on 16th April, Mr. W. Spence in the chair. It was agreed to hold a club show, date to be fixed later, also judge. It was decided that when members are entering for shows they should send a duplicate entry of their nominated birds to the secretary; also that the cup be engraved, and that a box be got for it. It was agreed to grant patronage to four open shows, and the secretary was instructed to let it be known that all societies wishing our patronage should write to me stating number of classes and judge. Several new members were elected. All who wish to become members should write to me for information.—A. DICKSON, sec.

BOURNEMOUTH & DIS. C.B.A.

Meeting held at headquarters on March 22nd, Mr. G. W. Jones in the chair. It was decided to hold the annual show at the Central Hall. Mr. Goodland addressed the members on rearing and feeding young birds, giving his experience for the past 15 years, which he hoped might prove useful to those commencing. Several members joined in the discussion, and questions were asked on various subjects. The egg and bread or biscuit feeding was generally agreed upon as the most suitable, together with maw, hemp and soaked German rape seed, with chickweed, watercress, lettuce, and dandelion (sparingly) as the proper green food. An instructive evening closed with a vote of thanks to the Chairman (Mr. Goodland).—W. O. BROOKE, Hon. Sec.

MANCHESTER & N. COUNTIES O.S

Meeting held April 18th, at headquarters, Deansgate Temperance Hotel, Mr. Bladon in the chair. Mr. Raynes opened a discussion on show management, reading a paper full of useful hints and advice. This was followed by a very interesting discussion. A hearty vote of thanks was accorded Mr. Raynes, to which he suitably replied. We have engaged the services of the following gentlemen to judge at our open show on October 28th and 29th:—Messrs. Booth, Battye, Godley, Houlton, and Hadwin; and we will select one or two others later on. Next meeting May 2nd, when Mr. Houlton (St. Helens) will give us a paper on hybrid breeding, when I hope we will have a good attendance. Fanciers and friends are heartily invited.—H. BOOTHMAN, Hon. Sec.

LIVERPOOL O.S.

Usual monthly meeting held April 19th at headquarters, 64, Shaw Street, Mr. Daniels in the chair. Messrs. Wise and Snape were elected members. Letters were read from the Sheffield C.B.S. re Cage Bird Union, Southport C.B.S. re opening their radius to thirty miles, and from Messrs. Booth and Taylor on judging Norwich at our open show. Owing to the indisposition of Mr. T. Rowlands the lecture on the Yorkshire Green was adjourned. The position of our members re specialist club patronage was gone into, and the secretaries were instructed to send the following resolution to the new secretary of the C.B.U., with a view to same receiving the sanction of the Union:—"That any member of an affiliated society being a member of a specialist club which is not affiliated to the C.B.U. be at liberty to compete in such classes at a non-Union show which shall have been provided for the purpose of a competition between the members of his specialist club."—METCALFE and HILLMEN, Hon. Secs.

NATIONAL GREEN-MARKED Y.C.C

First annual general meeting held on April 23, at the Market Tavern, Bradford, Mr. W. H. Shackleton, president, in the chair. Owing to the inclement weather only a moderate attendance was recorded. Some very important business was carefully discussed and passed. Business: 1. The minutes of the first meeting of the club passed as a correct record. 2. The balance-sheet, after being carefully audited by Messrs. Hammond and Dean, showed the club to be in a sound, financial position, with a balance of £1 19s. 3d. on the first year's working. This was enthusiastically received by the members and passed. 3. The resignations of five members, most of whom are going out of the Fancy, were accepted with regret; these were more than counterbalanced by the nomination and acceptance of nine new members, Messrs. G. A. Bennett, F. Packer, J. S. Hartley, A. Womersley, A. Sutcliffe, A. Bennett, S. Moore, J. Whitwham, and A. M. Craven. 4. That all defaulting members be struck off the books unless the arrears be paid forthwith. 5. The Secretary presented his report for the year, and dealt with the working of the club. The show entries at Club Shows for the past season averaged nearly 12 per class, which, considering the club was only formed in May, was thought satisfactory; but we have every prospect of much greater and keener competition next show season. 6. Those gentlemen who had so generously supported the Prize Fund last year, especially our President and Vice-President, were heartily thanked for the same. 7. It was unanimously decided that in future all competitors for the Club's Specials must exhibit at not less than five club shows, and in the classes specially provided for the club to entitle them to those specials. 8. The classification, after a lengthy discussion, will be the same as last year, with same conditions, re judges, who will be expected to adhere to these conditions when judging. 9. The retiring officers were cordially thanked for the painstaking and enthusiastic work done during the year. 10. The President, Mr. W. H. Shackleton; hon. auditors, Messrs. Hammond and Dean; scrutineers, Messrs. Walsh and Townsend, and the Secretary were elected unopposed. 11. The officials and members present felt that the interest of the club would best be served by the Secretary forwarding the ballot papers for the election of the other officials, etc., to each member not present, asking them to kindly fill up and return on or before Saturday, May 7, to the scrutineers, Messrs. Townsend and Walsh, 12, Cecil Street, King's Cross, Halifax.—F. ARMSTRONG, Hon. Sec.

Aviaries, Bird-Rooms and Cages.

Price 2/3, post free (bound in cloth, gilt).

A Special Handbook written by that well-known fancier, MR. H. NORMAN ("Cage Birds" Artist-in-chief) who has illustrated it with a wealth of helpful drawings. It also contains

Ten Lovely Full-page Photographic Plates.

It is a practical guide for every bird-lover who desires to thoroughly understand the proper Building, Fitting, and Management of Aviaries, and Bird-rooms, and the making of Cages.

Mr. S. L. Southcombe (Taunton) writes:—"'Aviaries, Birdrooms and Cages' I have read with much interest, and it has been of much service to me in my hobby."

Send a Postal Order to—

CAGE BIRDS, 154, Fleet Street, London, E.C.

ASHINGTON & DISTRICT C.B.S.

Meeting held at Mr. Rowley's, Station Road, April 23, Mr. Thompson in the chair. There was a good turn up of members; four more were accepted. An Inspection Committee of eight was elected to scrutinize birds previous to day of show, which will be on November 12.—J. MILES, Sec.

SWANSEA AND DISTRICT C.B.S.

Usual monthly meeting, held at Headquarters, April 12th, Mr. W. J. Ford in the chair. After the usual business the date of the First Feather Show was discussed: it was decided to hold it on the second Saturday in June at the Mackworth Hotel Stock Rooms. Mr. Alf Hitchings (our late secretary) then introduced a visitor, in the person of Mr. Houghton, of Gloucester, who gave a brief address, and answered several questions put to him on different items concerning the Norwich Plainhead, which he is interested in. Mr. D. A. S. Longdon (the district secretary of the Cage Bird Union), gave a most instructive address, dealing with the C.B.U. He briefly outlined the formation of the Union, and spoke of its doings up to the present crisis. His personal opinion was that with careful handling the C.B.U. would weather the storm that was now upon them. He strongly advised the Swansea C.B.S. to stand by them, and not break away. A discussion then took place on the crisis, but being late, it was decided to adjourn the decision till next monthly meeting. The general impression left on the meeting was that we still remain members. Our next meeting will be held on May 10th, with a table show for British birds, and I hope every member who is able to will bring a few birds.—S. H. GEORGE, Sec.

SHEFFIELD C.B.S.

Usual monthly meeting held April 7th at Wentworth Cafe, Mr. A. Bradshaw (president) in the chair. The secretary read correspondence re the halls for our shows. It was thought that the charge for the Vestry Halls was too much, so it was decided to hold the next feather show in the Friends School, Hecley, and the October show in the Wycliffe Hall. After correspondence re Cage Bird Union, it was decided to drop the idea of the requisition, as we had not got sufficient societies willing to sign it. As to our remaining in the C.B.U., it was carried by one vote that we retain membership for this year. Our delegate was also instructed whom to vote for as president and secretary. The "experiences of members" proved very interesting, the following gentlemen taking part: Messrs. A. Bradshaw, Cowley, Drabble, Hobson, Kelly, Lindsay, and Thorpe. Mr. Bingham also gave a very instructive paper on "An Ideal Bird-room." In it he dealt with the situation of room, cages, perches, nest pans, seed hoppers, and most things one would use in the breeding of Canaries. Altogether it was a very interesting paper, and the applause when he had finished showed how much the members had enjoyed it. Next meeting, arrangements for the next feather show, and remarks on colour-feeding by members. Messrs. J. Dobson and A. Gregory were elected new members.—J. WOOLHOUSE.

WELSH C.B.C.

Annual general meeting held at the Ship and Bell, Merthyr, on April 9th. D. H. Tedstone took the chair. The secretary read the balance-sheet, which showed a substantial balance of £15 17s. to the credit of the club, which is very gratifying, the club therefore being in a most flourishing state. Several items of interest were discussed. A few rules were amended, and the classification for mixed shows underwent some changes, which we believe will be of benefit to the members in general. The election of officers was carried out; many old and new faces are included in the new roll. We trust all shoulders will be placed to the wheel. The presentation of cups and medals was then proceeded with, the following being the successful winners: J. H. Jones, T. L. Castree, J. Pritchard, H. W. Sheldon, G. Gregory, G. Bradford, and J. Pritchard (Abertillery). We are pleased to state that Mr. J. Sandiford (Preston) has again presented the club with a cup. Our annual club show will be held this year, at Abertillery, and we hope that all members will rally round, and make this year's show a record. Merthyr now holds the lead. Shows requiring the club's patronage, must apply before July 30th. I take this opportunity of inviting bird fanciers in Wales to join our club—one which is always in harmony and unity, ever having its members' interests at heart. I shall be most pleased to treat all applications.—G. T. JONES, Arfon House, Brecon.

SUNDERLAND C.B.A.

Usual meeting held on April 16th, in the Faweett-street Cafe, Mr. J. Farrar presiding. The usual correspondence was read. Mr. C. E. Thompson wrote asking to be relieved of his duties as president, owing to the pressure of his business on account of his appointment to various public offices; at the same time, he expressed his best wishes for the future prosperity of the association. It was unanimously decided to accept his resignation, and the secretary was instructed to write to Mr. S. Storey, M.P., inviting him to become our president. The principal business of the evening was then proceeded with, and Mr. W. Reid moved that this society withdraw from the Cage Bird Union. This was seconded by Mr. A. Walker, and an amendment, to test the feeling of the members, was moved by Mr. W. F. Swan, and seconded by Mr. A. Elliot, "that we remain affiliated to the Union" at present. On being put to the meeting, however, the majority of the members voted in favour of leaving the Union, and the secretary was instructed to forward our resignation to the secretary of the Cage Bird Union. The question of having a first feather show, or a series of table shows, was then brought forward, and the majority were in favour of the table shows, full particulars of which will be decided upon at our next meeting. It was also decided to appoint stewards to visit the various districts and mark all birds bred by the members, and the following were elected:—Monkwearmouth, W. Reid and R. Haswell; West End, W. F. Swan and J. Riseborough; Hendon, C. Waters and J. Copeland; outlying districts, J. Farrar and A. Elliot. Members requiring their birds marked will give notice at the first meeting after the birds are about three weeks old, when they will be attended to by the stewards elected to their respective districts. Will members please understand that all birds intended for competition in the members' classes at our annual show must be seen by the stewards, otherwise they will not be allowed to compete? I should be very glad to hear from any fancier who would like to join us.—W. REIN, Hon. Sec.

NEWARK AND DISTRICT C.B.S.

General meeting, held at headquarters, the Boar's Head, Middlegate, on April 20th. The balance sheet was adopted. It shows a balance in hand of £3, which is creditable, considering the short time the society has been in existence. The following were elected officers for the ensuing year: President, Mr. W. E. Knight; vice-presidents, The Mayor (Dr. Appleby), Messrs. J. McNaught, Davis, A. Botsford, J. T. Parnham; chairman, Mr. W. Lidgett; vice-chairman, Mr. W. Stray; committee, Messrs. W. Ellis, W. Lamb, W. Stray, W. Stray, jun., W. Toynbee,—Melsham, S. Watts, G. L. Hopkinson; hon. sec., A. Young, Boar's Head Hotel. Hon. treasurer, F. Smith.—ALEX. YOUNG, Hon. Sec.

LEICESTER (Hand-in-Hand) C.B.S.

Usual fortnightly meeting, held at the White Swan, April 19th, Mr. W. A. Gibbins in the chair. The date of the Nest Feather show was fixed for July 2nd, and members are required to give a guarantee, which closes on June 2nd. In the absence of Mr. Walton, last meeting's lecture was concluded by Mr. Noakes. At the finish a number of questions were asked, which Mr. Noakes answered satisfactory. The meeting terminated with the usual vote of thanks to Messrs. Walton and Noakes for their interesting lecture, to which Mr. Noakes replied. Will members kindly note that as May 17th is Whit-Tuesday, we have altered our meeting to May 24th.—J. E. WOOD, Sec.

LONDON AND COUNTIES O.A.

Monthly meeting held at headquarters, the Session House Hotel, Clerkenwell Road, E.C., there being an extra good attendance, our worthy President (Mr. F. W. Thorpe) presiding. The society has for some time been looking out for new headquarters. The secretary has at last found a good hall in very good quarters. A committee was formed to view the hall and to make final arrangements, it consisting of Messrs. F. W. Thorpe, R. J. Pretty, H. J. Pearce, W. Shakespeare, G. Thurling, and W. Gilbert, the secretary. The Chairman called upon Mr. J. Robson to give a lecture on Canary breeding, which he did, showing how fanciers can get over the great difficulties we have to contend with, and get on to the road to success. The lecturer was asked many questions, which he suitably answered. The Chairman proposed a vote of thanks to Mr. Robson, which was seconded by Mr. R. J. Pretty, and supported by Mr. H. J. Pearce. Mr. Robson replied. Two new members were enrolled, viz., Messrs. F. Harrison and W. Salter. A hearty vote of thanks to the chairman brought a most pleasant and enjoyable evening to a close.—W. GILBERT, Sec.

ARDWICK AND DISTRICT C.B.S.

Meeting held April 19th at the Onward Hall. The date was fixed as a debate night. Our treasurer (Mr. Thornely) promised to act as our leader, which I am sure he did, proving that we had selected the right man for this task. The chief item (and it took up some considerable portion of the evening) was that an amateur who had gained such promotion by exhibiting Canaries alone if possessed of a good British bird and showing it in open classes won a first or second prize, should be debarred from showing as an amateur again in his society. This he thought a very hard rule, seeing we did not breed these birds. There were a few who agreed with Mr. Thornely. This question was well thrashed out. Mr. Thornely went so far as to say that a member gaining three 1st prizes before becoming an amateur with Canaries should he think fit to start in British birds, should have the same privilege as he had with Canaries, starting as a novice again. This fairly brought the quiet ones out, but Mr. Thornely was equal to the occasion. I think the debate would have been going on till now if someone had not called "time." A vote of thanks was accorded to Mr. Thornely, which brought a very interesting and very friendly evening to a close.—J. SPENCER, Hon. Sec.

HASTINGS UNITED C.B.S.

On April 20, the members held their annual dinner at Headquarters, about 30 members and friends partaking of an excellent repast, provided by the Host, Mr. J. Booty, one of the vice-presidents. After the usual toasts, Mr. E. E. Clarke, the president, proposed the success of the society, which was responded to by the Secretary, Mr. A. E. Godden, who was proud and pleased to say the society was in a flourishing condition, both financially and socially; also the membership had greatly increased. The health of the president was proposed by the vice-chairman, Mr. T. G. Coombs, who at the same time presented him with a silver-mounted walking stick, carved by Mr. R. Cragg, one of our members, from a piece of wood from the wreckage of the "Amsterdam," wrecked off Hastings in 1764. The President, replying, said it came a great surprise to him, and now it was his pleasure to surprise someone else. He then called on Mr. A. E. Godden to accept a very handsome oak clock, subscribed for and suitably engraved by the members of the society in recognition of his services. Mr. A. E. Godden thanked the members and committee for the clock, also for the help they had given him in making the society such a success. During the evening a splendid musical programme was carried out by Mr. Baham (gramophone selections), Mr. Crouch (piano), Messrs. Coombs, Pennells, and Wilson, songs, added to the harmony of the evening.—A. E. GODDEN, Hon. Sec.

Foreign Birds FOR Beginners.

By W. T. PAGE, F.Z.S., etc. Foreign Bird Expert to "Cage Birds."

Price 1/1 post free.

A highly instructive Manual, written from personal observations made during a lifetime's experience. Contains a magnificent coloured plate and a number of black and white Illustrations. Indispensable to all keepers of foreign Birds. A book replete with useful hints and reminders, especially instructive and useful for beginners.

Send Postal Order to—

CAGE BIRDS, 154, Fleet Street, London, E.C.

JUDGES OF CAGE BIRDS

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

L. ADAMS, Eagle Aviaries, High Street, Folkestone. Judge all kinds Cage Birds, Rabbits, Cats, Cavies, etc.; life experience. Terms moderate.
J. C. BARNES, 149, Duncombe Street, Walkley, Sheffield. Judge of all varieties of cage birds. Long, practical experience. Terms moderate.
J. W. BRUCE, Coldstream. Judge of all varieties of cage birds; Border and British Bird specialist. Terms moderate.
W. A. COWGILL, 115, Washington Street, Girlington, Bradford. Judge of all varieties of cage birds. Over 25 years' practical experience. Terms moderate.
J. DOBSON, 18, East Road, London, N. Judge of Canaries and all kinds of Cage Birds.
JOHN FROSTICK, Endlesham Road, Balham, S.W. Expert and Specialist Judge of British, Hybrids, and Foreign Birds. 30 years' practical experience.
GEO. GARDNER, 11, Haverstock Road, London, N.W. Judge of all kinds of Cage Birds.
C. A. HOUSE, 82, Upper Walthamstow Road, Walthamstow. Judge of Canaries, Mules, British and Foreign Birds.
E. A. LOVELL, 19, Islington Road, Southville, Bristol. Judge of Cage Birds; all varieties.
J. W. METCALFE, Reservoir Hotel, Whitefield Road, Liverpool. Judge of Cage Birds. Specialist Yorkshire and Norwich.
W. R. MILES, The Aviaries, Chichester. Judge of all varieties of cage birds. Life experience.
W. MUNDELL, 6, Carlisle Place, Manningham, Bradford. Judge of Canaries and Cage Birds.
H. NORMAN, The Eyrie, Salisbury Road, Carshalton, Surrey. All varieties of Cage Birds. Specialist Hyhrids and British Birds.
J. PATTERSON, Chirnside. Judge of Cage Birds; all varieties. Wide practical experience. Specialist Border Fancy Judge.
J. H. PAYNE, 17, Northgate Street, Gloucester. Judge of Canaries, British and Foreign Cage Birds.
WM. SHAKESPEARE, 233, Kentish Town-rd., London, N.W., Judge of all varieties of cage birds. Life experience.
C. E. SILK, The Aviaries, Emsworth, Hants. Judge of all varieties of Cage Birds. Life experience.
A. E. SILK, Aviaries, Whitstable. Judge of all varieties; Norwich specialist; genuine life experience. Terms moderate.
R. TAYLOR, Lime Kiln, Preston. Judge all varieties; Norwich a speciality. Terms moderate.
HENRY TAMS, Orchard Place, Longton, Staffs. Judge of Canaries, British and Foreign Birds. Twenty-five years Breeder and Exhibitor.
S. TICKELL, 22, Honey Street, Bodmin. Judge of all varieties of Cage Birds; specialist Norwich, Cinn. & Liz. Long practical experience. Terms moderate.
R. B. TOPE, Hoe Street, Plymouth. Judge of Cage Birds, Rabbits, Cats, and Cavies. Twenty-five years' experience.
W. VARDY, The Aviaries, Hucknall Huthwaite, Notts. Judge of all varieties; specialist in Norwich Plainheads. Life experience. Terms moderate.
J. WALSH, Pheasant Aviaries, Blackburn. Judge of Cage Birds; specialist Mules, British and Foreign. Terms moderate.
C. WILSON, 14, Frizington Road, Frizington, Cumberland. Judge of Bules, British and Foreign birds; life experience. Fee moderate.
J. WILCOCK, 14, Chapel Street, Eccleshill, near Bradford, Yorkshire. Judge of all varieties of Cage Birds. 25 years' Breeder & Exhibitor leading shows.
J. C. WILMOT, 17, Sandhurst Road, Bedford. Judge of Canaries & British Birds. 30 years' experience.

SHOWS.

ADVERTISEMENTS.

SCALE of CHARGES, which must be fully PREPAID.
¼-inch **2/-**, ½-inch **3/-**, 1 inch **5/-**

If more than 1-inch in an issue is required the charge will be **6s.** per inch and *pro rata*, except to "Guaranteed" Shows appearing in our Dates Fixed column, which are charged at **5s.** per inch and *pro rata*.

SHOW ADVERTISEMENTS across two or more columns 7/6 per inch, column width, except to "Guaranteed" Shows, for which the charge is 6/- per inch, column width.

Secretaries desirous of "guarantceing" a Show should apply for proper guarantee form to our Manager.

A reduction will be made for a Series of not less than Nine Weeks.

CAGE BIRDS, 154, FLEET STREET, LONDON.

PORTMADOC POULTRY, BIRD, & EGG SHOW, **MAY 14th.**

Entries close **May 6th.** Spratt's pen, etc., in the open. Birds under cover. **HUMPHREYS, Sec.**

I thank CAGE BIRDS for the sketch of my light Mule appearing on the frontispiece of a recent issue, writes Mr. J. Locke (Bristol). I might say I purchased it at a little country town of Devonshire (which is my native home). It was bred by a well-known dealer and catcher, Mr. Mailes. This gentleman has been breeding for 25 years, and only accomplished the feat of turning out one so clear (the bird in question). This will give fanciers an idea as to the difficulty of breeding what we term an exhibition light Mule. I might say that it has changed hands, and is still taking premier honours for its new owner.

I was agreeably surprised on receiving CAGE BIRDS of April 6th to see that you had done me the honour of reproducing the picture of my yellow even-marked cock Border Fancy on the frontispiece of your widely read journal. Please convey to your Mr. Norman my best thanks, as I consider he has produced a real picture without a doubt. The bird is a second season one, and has won at Annan two years in succession under Messrs. Bennet and Connerton, at the Scottish National under Mr. Patterson, and 2nd at Crystal Palace under Mr. Robson. I may state that I have been a reader of your most interesting paper from within a week or two of its first publication. I consider it the one and only paper for bird-keepers, and would not be without it. Wishing it continued success,—G. MEEKLEY (Carlisle).

Twitterings.

Mr. Dan Browning, of Exeter, will, we hear, judge the Falmouth Cage Bird Show on December 7th.

Mr. W. H. Lindley, of Womhwell, is, we hear, elected to judge the nest feather show of the Deepcar Society on July 2.

Messrs. Rohson and Pattrick are engaged to judge the Battersea open show on October 19, writes Mr. F. Easterling, the secretary.

The annual show of the Bournemouth and Dis. C.B.A. will he held on Novemher 16th and 17th, writes Mr. W. O. Brooke, the hon. secretary. Mr. J. H. Payne (Gloucester) will judge.

Will fanciers kindly note that I have resigned all secretarial duties of the Business and Dis. O.A., and henceforth shall take no active part in its business? writes Mr. Findlay McGillivray.

The first feather show of the Sale Open Society will he held on July 2nd, instead of June 18, as stated hefore, writes Mr. Jas. Irlam, the hon. sec.

Will secretaries and fanciers kindly note, writes Mr. D. E. Kent, that I have removed after sixteen years from Gainsboro' Grove to 174, Ladykirk Road, Newcastle-on-Tyne?

Mr. T. Harrison (Altrincham) has, we hear, been elected to judge Crewe Nest Feather show on June 18th, and Altrincham Nest Feather show on July 9th.

It has been decided to hold the seventh annual show of cage hirds, etc., in connection with the Avonhridge O.S. on Novemher 19th, writes Mr. P. Gentleman, the hon. secretary.

We have been successful in engaging the services of Mr. J. H. Roe, again as judge for our annual show, to he held Novemher 19, writes Mr. J. Shaddock, hon. sec., Coventry O.S.

Our respected chairman, J. Hands, Esq., writes Mr. Geo. Havver, secretary of the Blaydon-on-Tyne and Dis. C.B.S., has been chosen judge by the Beamish Society for their First Feather show.

Our first feather show is to be held on June 18th and not on the 21st, as announced in last week's CAGE BIRDS, write Messrs. Hallam and Lovatt, the hon. secs. of the Longton and Dist. C.B.S. It was our mistake.

Mr. J. Ritson (4, Hinchcliffe Walk, Mushroom Lane, Sheffield), would be glad if any reader could let him know the address of the maker (or seller) of the soft-hill food known as Jules Gasparin's Continental Bird Food.

Those requiring Sandiford's new colour feeds send for new samples and prices. Hottest colour in the world last season. Mr. J. Davies, winner of the N.P.C. challenge cup last season, had the hottest hirds alive, and he used only our Royal Red.—(Advt.)

We are to have a visit from Mr. J. Robson to lecture upon the pleasures of Canary breeding, writes Mr. H. Smith, hon. sec., Wimhledon C.B.S., and I am particularly anxious to have a "full house" on this occasion. Date, May 2, at 8 p.m., at 6, The Broadway.

I have given up the secretaryship of the Weybridge and Dis. F.S., and Mr. W. Hodges is honorary secretary and Mr. C. Keene secretary in my place, writes Mr. H. E. Parrott. Their address is Oatlands Farm, Weybridge, where all communications relating to the society should he addressed.

Owing to our being unahle to get the Corn Exchange for our show, writes Mr. H. P. Staig, hon. treasurer, Alnwick and Dis. C.B.S., we have changed our date from November 19th to November 16th, when our third annual open show will he held in the Town Hall. Will secretaries please note?

We have removed our headquarters to the Good Intent Mission Hall, Whitworth Street, Openshaw, where we have secured rooms suitable for hoth meetings and shows, writes Mr. Fred Washbourne, secretary of the South Manchester C.B.S. Our First Feather show will be held on July 2nd; Mr. A. G. Davis will judge.

A friend of mine who commenced for the first time this season with Canaries, and who got two birds from me, I hrought on the carpet last Friday afternoon about patronising CAGE BIRDS, writes Mr. J. H. Jowett (Bradford). Answer: "Nay, John, I've been already taking it weeks upon weeks. Why, even my father gets it weekly and he has not a hird in the house, yet!" What a pleasing testimonial!

At the last monthly meeting of the Suffolk C.B. Society, it was carried by a majority of the members present, that hereafter this society shall be known as the "Eastern Counties" Cage Bird Society, and shall be open for membership to all residing therein. Also we have hired new headquarters, our club house now being at the "Crown and Sceptre, High Street, Ipswich. The room, I may say, is far more suitable for our wants.—W. BARNETT, hon. sec.

The 1909 halance-sheet of the National Green Marked Y.C.C. shows a balance of income over expenditure of £1 19s. 3d., which, considering the fact that the club has only been in existence a few months, is very creditahle to the sec. and treasurer (Mr. F. Armstrong) and the other officials.

That well-known Welsh fixture, the Portmadoc Cage Bird, etc., Show, is to be held on May 14. Fanciers are assured of the greatest care heing taken of their exhibits, which will he under cover during the whole time. The sec. is Mr. R. G. Humphreys, Portmadoc, and the entries closing date is May 6.

The Welsh Cage Bird Club's balance-sheet for the year ended 1909 shows cash in treasurer's hands of £15 17s. 1d., which is distinctly good, and the club's assets (consisting of four cups) are valued at £9 10s. The sec., Mr. G. T. Jones, and the other officers are deserving of every praise for this satisfactory state of affairs.

It might interest the readers of CAGE BIRDS to hear that last week I successfully brought a Canary sitting on three eggs a journey of 320 miles with two changes—a taxi across London, and a three-mile country drive—without injury to the eggs. Three hirds hatched out five days after they arrived here, and are strong and healthy and doing splendidly.—LOUIS KERR WINTER (Keston).

OBITUARY.

Mr. J. A. BEESON (Saxmundham).

It is with much regret I have to write and inform you of the death of one of our members, and one who was a personal friend of mine, writes Mr. Ernest Gostling, hon. secretary of the Saxmundham C.B.A. The deceased who would have been nineteen years of age in June, has been a fancier for only two years, hut during that short time he succeeded in gaining several honours at our association shows, as well as a few in open competition. He would, I am sure, in a very short time have become well known in the Fancy. Some idea of his abilities in other directions may be gathered from the fact that only a few weeks ago he was elected on the committee of our Gannon Institute (a most important social body) here, besides the posts he occupied in other recreations. He was one of the last whom one would have expected to he taken from us, hut appendicitis (from which he died) is as dangerous to the strong as to the weak. He was one whom the Fancy could ill afford to lose, and one whose place, as far as this association is concerned, cannot be filled.

Mr. A. LANGLEY (Warrington).

I regret to announce the death of our member, Mr. A. Langley, who passed away on April 21st, after a long and painful illness, writes Mr. C. Dukes, hon. sec. of the Warrington C.B.S. The deceased was 28 years of age, and unmarried. He was a lover of the Yorkshire Canary, which he exhibited with a fair amount of success for so young a fancier. He was also a member of the Manchester and N.C.O.S. I am sure I am only voicing the sentiments of all who knew him in offering our deep sympathy to his parents in their great loss.

Mr. R. C. FORBES (Pwllheli).

It is with great regret, writes Mr. J. Rowlands (Pwllheli), I have to record the death of Mr. R. C. Forhes (Pwllheli) on April 20th, at the ago of 47 years, after a short illness. Everything possible was done for him, hut it was all to no purpose. He passed away peacefully. The funeral took place on April 23th. Mr. Forhes was a practical fancier, and one of those unselfish men so rarely met with, his service being always cheerfully given. And he left nothing undone that would tend to the prosperity of Pwllheli fanciers' show, of which he was chairman. His loss will he keenly felt hy us all. There were many heautiful wreaths, including those from the Fanciers' Committee, the Foothall Club, the Conservative Club, the Salem Sunday School Class (Liverpool), etc. We are sure all will join with us in sympathy with his wife and relatives in their hereavement.

One ought to feel proud of a garden and be able to take a real pleasure in showing it to one's friends. This can be very easily accomplished by studying Mr. Barker's floral advertisement in this week's issue, and ordering the plants, etc., one requires now; not forgetting, of course, to mention CAGE BIRDS when doing so. Mr. Barker's prices are unapproachable, and the quality of his goods the hest.

Members and friends of the City and Suhurhan A.C.B. are asked not to overlook the annual cricket match between the society and the "Early Birds C.C.," which is duo to take place to-day (Saturday, April 30th), at the Paddington Recreation Ground, off Elgin Avenue, Edgware Road, W., start at 3 p.m. prompt. An enjoyable and probably exciting game is, we hear, assured, as the society is putting a strong team in the field, and hopes to avenge previous defeats. Teas can he ohtained on the ground.

We have received from Mr. J. W. Ramsden, the acting hon. sec., a copy of the rules, etc., of the London and Provincial O.S. The booklet, which is neatly produced, includes a list of the officers, a most excellent programme of events (comprising lectures, exhibitions, demonstrations, etc.), the L. and P.O.S. sliding scale charges, and a list of the names and addresses of the members. Particulars as to membership may be had of Mr. Ramsden, 11, Josephine Avenue, Brixton, S.E.

"OUR CANARIES."

A Magnificent Standard Work. Part I on Sale to-day. 6d., post free.

Owing to increasing business, I have reluctantly had to resign the position of secretary to the Altrincham Cage Bird Society, writes Mr. Tom Harrison. Mr. P. Drinkwater, Victoria Street, Altrincham, has been elected to fill the vacancy. Will fanciers and secretaries kindly note?

I have again undertaken the secretaryship of the Gateshead and Dis. C.B.S., writes Mr. T. Taylor, 68, Edward Street, Gateshead-on-Tyne. Our balance is the lowest on record, but we hope to have better news to give our friends hy-and-hy. It is somewhat late in the year (as it was only after considerable pressure that I eventually took over the secretaryship, it having lain open since February), hut I am sure the committee will accept all intending members if they will write to me at once.

In the "Avicultural Magazine" for April, Mr. H. Goodchild, the artist, surpasses himself. It is heautiful beyond the telling, and almost flatters the species which forms its subject—the Purple Sugar Bird. Notes concerning the species are contributed by Mr. Frank Finn, F.Z.S., who also writes further on the subject of Indian Birds. Other articles are from the pens of Mr. H. D. Astley, Lieut. Col. G. A. Momber, and Mr. T. H. Newman, and the number throughout will he found very readable.

Owing to the recent destructive fire which destroyed nearly the whole of the Lochgelly Co-operative Society's premises, the Co-operative Hall, which had been secured for our first annual show of cage birds on October 15th, writes Mr. W. Whiteford, hon. secretary, Lochgelly C.B.S., is being used as a temporary premises, thus necessitating our securing another hall for a show. We have now secured the Drill Hall, which is at the car terminus and suitable in every way. We have also secured the following gentlemen to act as judges:—Messrs. J. Smeaton (Prestonpans), G. Marlin (Hamilton), and J. McLennan (Edinhurgh). The society is in a most flourishing state, both as regards funds and members, and we hope to have a successful season.

Cuckoo!

I heard the Cuckoo for the first time this season on Friday, April 22nd, about one mile from Godstone village, writes Mr. E. S. Lugg (Lewisham).

An Aged Thrush.

The photograph of the Song Thrush which attained the great age of 25 years (see our supplement), was sent us by Mr. Andrew Wilson (Glasgow).

Yorkshire Canary Club.

Members of the Yorkshire C.C. are asked not to forget the annual general meeting on Saturday, April 30th, Market Tavern, Godwin Street, Bradford, at 6 p.m. All fanciers invited.—JOHN GREAVES, sec.

Linnet Feeds Young Chaffinch.

On Sunday, April 17, I was having a short walk, and I caught a young Chaffinch, writes Mr. George M. Cole (Jamestown, N.B.). Someone must have struck it, for the wing was bleeding, hut it is all right now. I put it along with a cock Linnet, and he is feeding the Chaffinch.

We Wonder!

An eminent medical professor (so the story goes) once spent a holiday in Wales and lived near a rookery. From his window, as he watched, he often saw the hirds reel about on the trees and then fall dead to the ground. He made several post-mortems and then wrote a treatise, "Epilepsy of the Rook." The cause, however, turned out to be a small boy of deadly aim with a catapult, who received twopence per dozen from the farmers for the lifeless bodies of their foes!

A Favourite Swallow.

A correspondent writes to "The Times," under date April 12th: "It may interest readers to know of the safe arrival of at least one of our summer visitors. To-night, on going my lock-up rounds, I flashed my hull's-eye on a particular nail in the rafter of the fowls' sleeping-house, on the look out for "our" Swallow, and there sure enough he was, safely perched on his accustomed roosting-place, a spot chosen with remarkable sagacity as safe from cats, rats, or other nocturnal marauders. There safely perched, surrounded hy his old friends the chickens and pigeons, he looked quite at home and perfectly fresh and sleek—hy no means tired or bedraggled as if after a long journey. I was pleased to see him, and I hope that no cold winds and sunless days will deprive him of the means of living."

A Tame Sparrow.

Referring to your remarks about Sparrows, writes "H" in the "Daily Chronicle," I would like to refute the general idea that they cannot be tamed or kept at home. My wife about eighteen months ago picked up one which had either been ill-used or been in the claws of a cat, for it had a broken wing. She caged it and doctored it, and now it is as pretty a hird as you could see, but rather wild to strangers. Again, she picked up, about twelve months ago, a young Sparrow that fell from its nest without a feather on it, gradually fed it with milk sop, and otherwise succeeded in bringing it up. Now it is as tame as a hird can possibly he, never in a cage, and always flying about. It used to pitch on her shoulder and eat out of her mouth; dance on her fingers; come on the table regularly at meal times for its share of food, and would sleep in her lap.

Order at once, Part I. of "Cage Bird Hybrids," 6d. post free.

The best, most complete, and up-to-date book on Mule and Hybrid breeding.

THE WHITE WAGTAIL AT HOME

By W. E. Teschemaker, B.A.

Perwick. [*Isle of Man.*

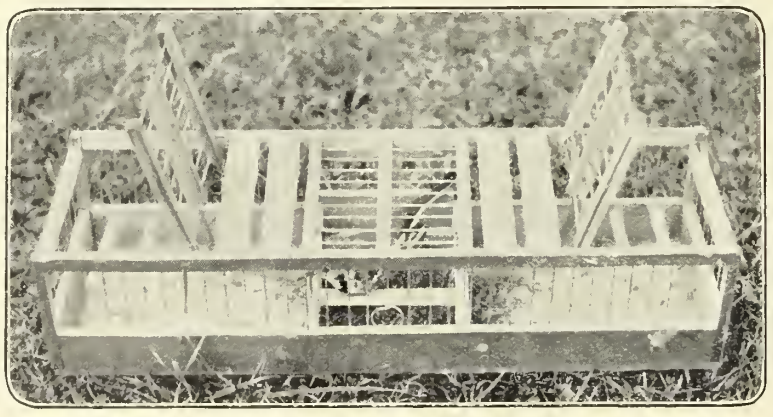
THE White Wagtail *Motacilla alba* is an interesting species which, though by no means rare, is little observed or known. There are probably two reasons for this: first, because it is practically only seen in our Islands during its spring and autumn migrations; and, secondly, because even during the short period of its migratory visits it is for the most part only seen on our West coast. For those of us whose interest in British birds is chiefly centred in studying their actual lives and endeavouring to penetrate the reasons of their comings and goings the White Wagtail will always possess a special fascination because there are several problems connected with it which I think have not as yet been satisfactorily solved.

Not the least interesting of these problems is, perhaps, the question why the White Wagtail does not normally breed in our islands. Northward of us it breeds frequently in the Faroes, abundantly in Iceland, and even in the south of Greenland. Eastward of us we find that it is the commonest of all the Wagtails in Norway and Sweden. Professor Collett, for instance, includes the White Wagtail among the 190 common breeding species of Scandinavia, whilst he classes the Pied Wagtail among the seven rare breeding species. South of us we find it breeding freely in Central Europe, and, indeed, it has been frequently described as the "Continental representative" of the Pied Wagtail. Only last summer I had a pair of White Wagtails and their half-fledged young sent to me from the north of Belgium, barely 100 miles from our S.E. coast. And yet the authentic instances of its breeding in Great Britain are amongst the rarest of ornithological events, and, when they have occurred, these instances have chiefly been noted on the South Coast. For instance, on May 31st, 1904, near Brighton, in some chalk rubble a nest was found containing an incomplete clutch of three eggs, this being the first recorded instance in the county of Sussex.

Another as yet unsolved problem is why the White Wagtail should uniformly leave our shores in the autumn whilst its Pied cousin frequently stays with us throughout the winter. Howard Saunders speaks of "cold and want of food" as the impelling causes which drive it southwards, but, had he studied this bird from an avicultural point of view, he would probably not have made this suggestion, because in an aviary the White Wagtail will be found to be every bit as hardy as the Pied, and during last December mine endured thirteen degrees of frost with perfect indifference. Have we not also the fact that the White Wagtail penetrates much further north in the breeding season than the Pied, and successfully rears its young amid the fierce gales and low temperatures of Greenland and Siberia? We shall have something further to say on this topic later on.

For the present, then, we will accept it as a general statement that the White Wagtail does not breed with us, but traverses our islands twice every year, namely, during April and the early part of May, and again during late August and September.

A third problem is why the White Wagtail arrives first on our S.W. coast and (both in regard to England and Ireland) passes up the West Coast on its migration in preference to the East Coast. A brief consideration of the migration routes of this species will, I think, throw some light on this question. The more we study the migration of birds the more clear, I think, becomes the fact that they are not blown about in a haphazard manner by contrary winds, as some writers would have us believe, but, on the contrary, have certain definite routes, keep to a fixed time table, journey northward to some particular district to breed, and return southward to certain winter quarters well known to them.



In regard to this species there appear to be at least three distinct migration routes. The birds breeding in Siberia, which may be distinguished by the lighter shade of grey of their upper parts, fly southward across the great Steppes, across Turkestan, across the great chain of the Himalayas, and winter in India.

The Scandinavian contingent skirt the west coast of Denmark, pass over the little island of Heligoland, where they are often seen in large numbers in September, and so across Central Europe to the Mediterranean coasts. It is a reasonable conjecture that some, at all events, of the White Wagtails, that winter in Asia Minor, Palestine, and the Valley of the Nile are of the Scandinavian race.

Lastly, we have the western contingent, which winter in North-Western Africa and in Spain, and which, on their spring migration, appear to keep closely to the Atlantic seaboard. Following this route they naturally strike our S.W. coast first, and here the stream of migrants appears to divide, some pressing up the Welsh coast and thence northward through Scotland to the Faroes and possibly Iceland; while others sweep up the west coast of Ireland, and it seems reasonable to assume that these latter are making for Iceland by a single direct flight across the open sea or else for Greenland by way of Iceland. The White Wagtail seems to proceed in a leisurely manner on its migration, taking a long flight and then resting in some favoured spot for several, and sometimes for many, days, especially during its autumn flight.

In the summer this species, as we have seen, is spread over such a large area that it is nowhere numerous; but in its winter quarters it is sometimes seen in immense numbers. Howard Saunders, for instance, speaks of "flocks whitening the furrows in Spain and the south of France." Again, Eagle Clarke says, "During our ill-fated visit to the Isle of Ushant, which lies immediately to the south of our extreme south-west coast, in early September, 1898, Mr. Laidlaw and I saw many White Wagtails on migration. On some days as many as two hundred came under our notice, and parties of from twenty to thirty were not uncommon."

As showing the abundance of White Wagtails in Egypt in the winter, we may quote from an interesting old book written more than a century since—Sonini's Travels in Upper and Lower Egypt, 1799:—"There is no kind of bird more plentiful. . . . Some of them came into the vessel's cabin during our voyage upon the Nile, and would feed close to our sides with engaging security." Nor is this species any less common to-day in Lower Egypt. In his "Rambles of a Naturalist in Egypt and other Countries," J. H. Gurney says:—"This is by far the commonest bird in the Delta in the winter; and really they rather pall on you after a time, for one sees White Wagtails at every step, in every field, on every pathway,

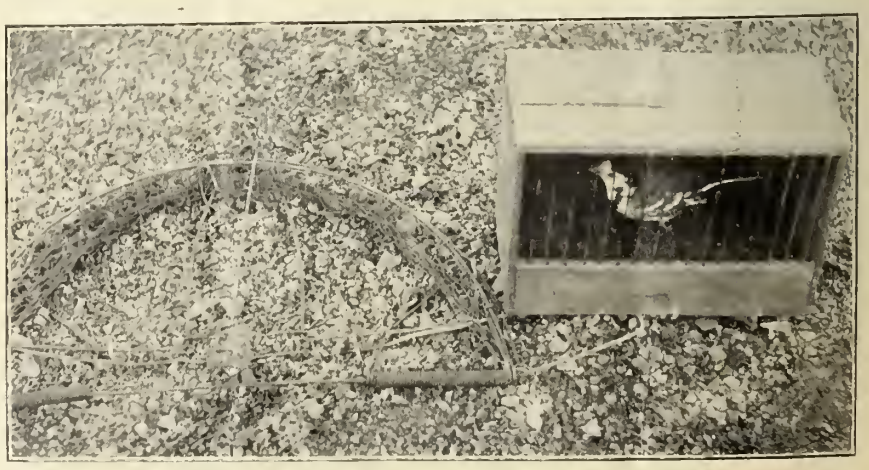
Three-compartment Trap Cage, set for action, with Pied Wagtail as "call-bird" in the centre compartment.

and frequently in company with Sandpipers on the sand-banks—singly, in pairs, in family parties, in flocks of hundreds, and sometimes they came upon the Dahabeyah. A large flock will generally have some red-throated Pipits with it. But, as spring draws on and one goes farther south, both these species become scarce. I do not remember seeing any White Wagtails at all in June. The last flock I saw was on the 12th of March—a countless stream migrating northwards. The next day there was not one. Wilkinson says that *Abou fasada* (the Arabic name of the species,) means 'Father of corruption' An explanation of this name, more probable than that which he and Dr. Adams favour, has been given me, viz., that this Wagtail seeks its food (small flies) among the droppings of the cattle." Gurney also speaks of the enormous flocks of White Wagtails which he saw in Algeria. Personally, although I have spent parts of several winters on the Mediterranean coasts and have several times been well placed for observing the passage of the spring migrants from N. Africa, I have never been lucky enough to meet with more than a few scattered individuals of this species.

In our own country, however, I have been more fortunate. For a number of years past the opportunity has been afforded me, through the kind hospitality of relatives, of spending the last fortnight of September in the Isle of Man. Midway between Douglas and Castletown lies the little harbour of Port Grenaugh, facing the sandy promontory known as Langness, at the foot of which nestles the fishing village of Derbyhaven, and at the extremity of which stand a weather-beaten old fort, built by the Earls of Derby, and a modern lighthouse. On Langness the first "Derby" was run—a fact which does not seem to be generally known, yet that this is so can be established beyond question.

It was in September, 1906, that my attention was first drawn to the occurrence of the White Wagtail as an autumn migrant at Port Grenaugh. As I said above, my own view is that most of our regular migrants travel by a fixed route, well-known to them, and have certain definite stopping places. I have no doubt, therefore, that for countless years past White Wagtails might have been seen in this little sheltered nook at this particular time of the year, and the only excuse I can offer for not having noticed them before is that partridge-shooting begins in the Isle of Man on the 13th of September, and that during my many autumn visits I have been chiefly occupied in tramping the turnips. However, one evening towards the end of September, 1906, I happened to be digging some ragworms, at Port Grenaugh, for pollacking, when I noticed several White Wagtails running actively along the beach. Next morning I again walked down to the beach to investigate, and to my great delight I found a small flock of well over a dozen individuals. It was high tide at the time, and the Wagtails were busily occupied in hawking flies just above high-water mark.

Male White Wagtail in autumn plumage.



Having scraped out a shallow pit in the warm sand, I curled up in it and settled down to watch their operations. There is a species of fly which deposits its eggs in decaying seaweed, and if you will turn over one of the heaps of rotten weed which can generally be found on any beach just above high-water mark (which, by the way, is not a nice operation, because the smell is horrible), you will find it full of small gentles. These gentles develop in due course into small flies, and it was these flies that the Wagtails were devouring. The facility and certainty with which the Wagtails captured their winged prey were really wonderful to see. The flies skimmed in every direction, at all sorts of angles and at varying speeds, but as they passed overhead the Wagtails sprang lightly and without apparent effort from the ground, a slender beak would close with a snap, and that fly would fly no more.

As the Wagtails advanced across the beach they approached nearer and nearer to my shelter, until at last they were within a few yards of me and could be examined as closely as if they were in a cage.

Probably the majority of our readers will never have seen a White Wagtail, and will, therefore, want to know what it looks like and how to distinguish it from its Pied relative. In the spring there will never be any difficulty in distinguishing between them, because, in its breeding plumage, the entire back and mantle of the White Wagtail is a light lavender grey, that of the Pied Wagtail being entirely black; the "shoulder" of the wing is also light grey, and the heart-shaped area of black on the throat and upper breast is narrower and ends in a point; the flanks also are of a much lighter grey. In the autumn, however, we shall have much more difficulty in distinguishing between these two species, because at that time of the year the greater number of individuals will be young birds, and the young of these two species are very closely alike, both having light grey backs and an irregular patch of black on the throat.

It is just on such points as these that one can test the accuracy of the bird-books. A standard work (Howard Saunders) tells us that young Pied Wagtails are "darker on the upper parts," and an even more recent writer says: "If they show any real black on the head or body, they are young Pied Wagtails." As a matter of fact, I think both these observations are incorrect.

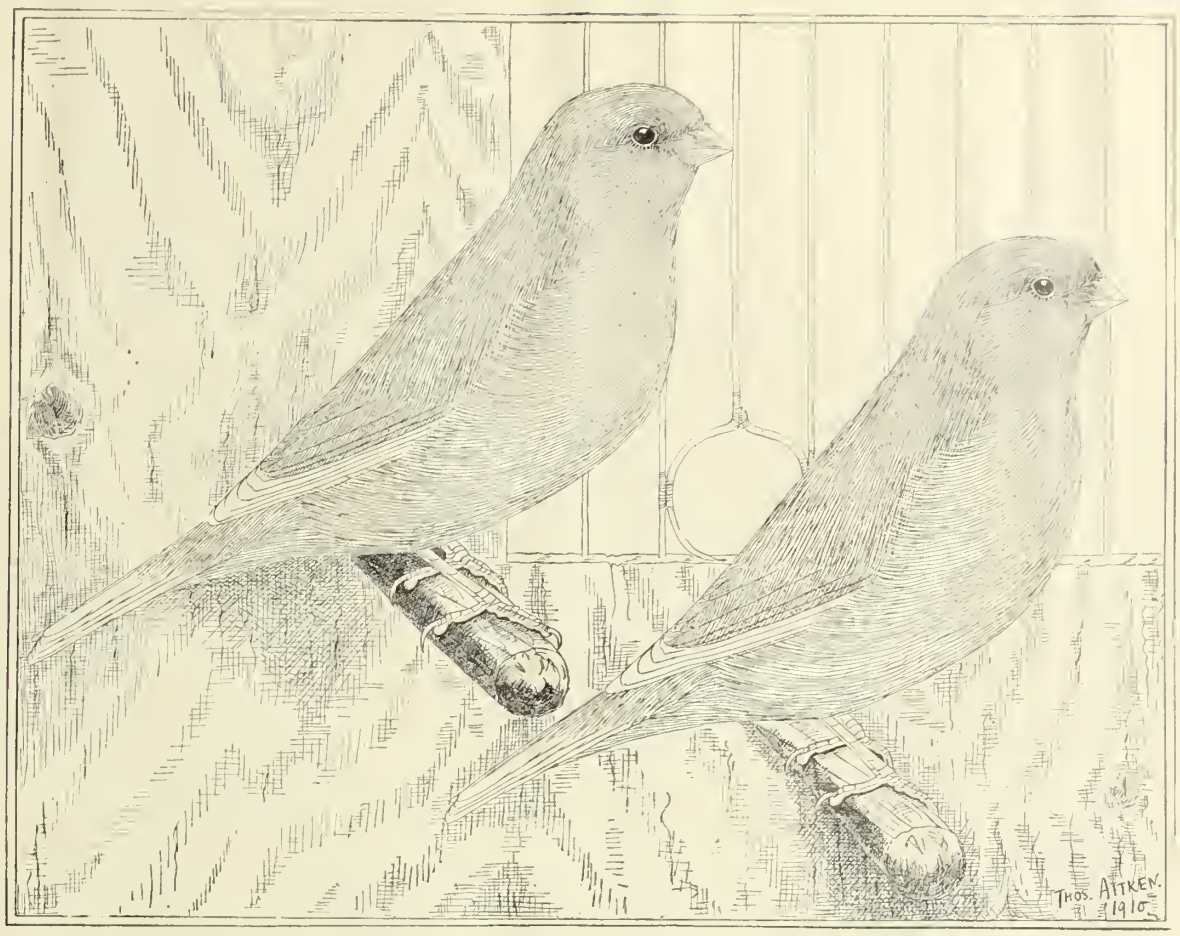
Young birds of either species will, in October, be found to be of the same shade of grey on the *upper* back and to have an irregularly shaped patch of black on the head and throat. Should you catch a Wagtail in the autumn and wish to identify it, first look at the cheeks; if the latter are yellowish, you will know that it is a young bird of the year. Then examine the

Spring Net Trap, set for action, with Pied Wagtail acting as "call-bird."

rump, turning the feathers back with your finger; if this part is a dark sooty colour, your bird is a young Pied; if a light grey, it is a young White Wagtail. (You will get a good idea of the appearance of an adult White Wagtail from the photo reproduced, which is taken from a stuffed specimen, a bird I caught in Devonshire and had in my aviary for some time. During its period of captivity its tail became somewhat frayed at the extremity and it therefore appears a little shorter than it really should be). If your bird has pure white cheeks then it is an adult, and if it is a White Wagtail it will have the entire back of a light grey colour; some adult Pied Wagtails become somewhat grey on the back in winter, but never wholly grey.

If we add to the above that adult males (of both species) have a much larger area of white on the forehead than adult females, you will have a good general idea of the differences between the two species.

Not having any apparatus with me, I had to content myself on this occasion with watching these White Wagtails, but I fully made up my mind to try to catch a pair for my aviary should I have another such opportunity. The following September (1907) therefore I took over in my portmanteau to the Isle of Man two spring net traps, one of which I had purchased and the other constructed by myself.



A Cute Pipit.

I was delighted to find the White Wagtails once again at Port Grenaugh, and in even greater force, for this time there were nearly a score of them. Evidently there had been some rough weather recently, for a great bank of seaweed, which had been washed up to high-water mark, extended across almost the whole breadth of the little harbour. On this bank of seaweed I placed the trap I had purchased, which was a somewhat elementary affair, consisting of an oval wooden base to which was hinged a hoop of stout wire carrying the net and actuated by a spring. A number of Rock Pipits (*Anthus rupestris*) were searching for food amongst the seaweed, and one of these was not long in succumbing to the temptations of a succulent mealworm. He stepped gingerly on to the trap and made a tentative peck at the meal-worm. Down went the trigger, up flew the net, and—missed him. When the Pipit saw the trigger fall he gave a little hop backwards, without hurrying himself, and before the net fell he was out of range. What annoyed me was that the Pipit did not seem the least startled by the occurrence; he walked sedately over the net, annexed the mealworm, and departed smiling. I reset the trap, but the same thing happened a second and a third time. I think it quite likely that that trap is on Port Grenaugh beach to-day; at all events, I did not trouble to carry it home.

Next day I tried my own trap, which consisted of a circular wooden base, eighteen inches in diameter, carrying two semicircular hoops actuated by separate springs. The trigger was released by a pull line, and the hoops then flew up and met in an upright position, edge to edge, the two portions of net thus forming a kind of tent. The advantage of this was that any bird stepping over the hoops was a certain prisoner, because the net rose on all sides of it simultaneously. With this trap I caught as many Pipits as I wanted, but not a Wagtail would look at it. It was certainly most tantalising to watch these beautiful birds walking daintily round the trap without the least sign of fear, but at the same time obviously fully aware of the nature of the device.

I think the amateur bird-catcher will find the White Wagtail about as difficult a proposition as he is likely to tackle. A year or two since the Small Waders' Aviary at the Zoological Gardens became so infested by mice that it was decided to clear the waders, etc., out, and turn in some Owls. One of the keepers told me that they had no difficulty in trapping all the Waders, Ouzels, Finches, and other birds, but that the Pied Wagtails absolutely refused to enter the traps.

In the following spring (May, 1908) I returned to the Isle of Man on a bird-trip of a different character, my object being to ascertain whether the White Wagtail bred in the island (it having been seen at Port Erin several times as late as the end of May); also to have a look for a nest of the short-eared Owl; and, lastly, to add to my collection of photos of sea-birds' nests. On the 28th May I found in the Curragh of Ballaugh the first nest of a Short-eared Owl which had ever been recorded in Manxland, and when, a few days later I came across a pair of White Wagtails on the Kitterland—a little rocky islet near Port Erin—I quite thought we were going to score another success. My companion also thought he saw a pair the same afternoon in an old stone quarry at Port Erin, but I think there must have been an error in the identification, because the following day I examined the quarry carefully and found only a pair of Pied Wagtails and their nest.

TWO NOTED SCOTTISH NORWICH PLAINHEADS.

Buff Cock, winner of first prize at Paisley Show for Mr. A. McFarlane (Glasgow).

Buff Hen, first prize at the Scottish National Show for Mr. A. G. Cameron (Kelso).

The only other White Wagtail we saw during our trip was in the extreme north of the island, near the Point of Ayr—obviously a migrant. I think, however, if any of my readers should happen to be at Port Erin next June it would be quite worth while to examine the coast carefully between Port Erin and the Calf of Man.

In September, 1908, I was again at Port Grenaugh—and so were the White Wagtails. This time I had brought over my pair of clap-nets, also an old Pied Wagtail as a call-bird and lastly some excellent bird-lime. The call-bird, unfortunately, did not survive the journey, and without a brace-bird the clap-nets were practically useless. I caught and baited a Rock Pipit and pegged it down in the nets, but in vain did I endeavour to beguile the Wagtails. Flies seemed rather scarce on the beach that year, and the Wagtails were generally to be seen in the bed of a little stream which runs into the sea at Port Grenaugh. I placed a number of limed twigs on the large stones in the stream, and I spent several hours on several consecutive days in driving the Wagtails up and down, but with marvellous intuition they invariably avoided the twigs. Once more, therefore, I returned home without any White Wagtails.

But the man whose hobby is birds does not know the meaning of the word failure; he simply tries again. Shortly after my return home I at last succeeded in catching a White Wagtail in Devonshire with a special form of trap-cage, using a Pied Wagtail as a call-bird (see Photo). Also a friend who has done a lot of trapping in India gave me some spring net traps which he had found very useful out there. When, therefore, my cousin, Capt. J. C. Bacon, J.P., once again extended his hospitality to me in the following autumn (1909), I felt practically certain of success, for I had learned how to catch White Wagtails, and I had the necessary apparatus with me.

But an unpleasant surprise was in store for me: not a single White Wagtail was to be seen. I spent a whole morning in tramping about the country, but in vain. I could only attribute this either to the fact that migration was earlier than usual last autumn, whereas I was later than usual in reaching the island, or else to the fact of there being no sea-wrack washed up on the beach.

I was just beginning to think that Fate had played me a somewhat scurvy trick, when, to my great delight, I discovered three young White Wagtails amongst a small flock of about a dozen Pieds, on a range of pigstyes, busily engaged in picking flies off the pigs' backs. I found the trap cage and the net-trap equally effective, when baited with mealworms and used in conjunction with a call-bird. The net-traps can be pegged down in a moment on turf or soft ground, but in order to set them on a wall or on shingle I found it necessary to fit wire lugs (shown in Photo) and place a heavy stone on each lug. When about a week later, from the deck of the good ship *Tynwald*, I saw the outline of the Manx mountains growing dim and yet more dim in the distance, I had the satisfactory feeling of not returning empty-handed, for I had three beautiful White Wagtails with me as well as two nice pairs of Rock Pipits.

THE ART OF HAND-WASHING BIRDS.

An exhibition given by that well-known metropolitan expert, Mr. W. Shakespeare (Kentish Town). The centre photograph shows this skilful fancier washing a bird in the ordinary way; in the left-hand picture a bird is being "tubbed" while held behind the operator's back; on the right, Mr. Shakespeare is seen conducting matters after being blind-folded.

1. Nestling Tawny Owls, photographed when but some few hours old. 2. The same nestlings grown into hearty and ever-hungry "balls of fluff." 3. The old homestead, the nest being in the fissure seen where the tree trunk divides. 4. A parent Tawny Owl snatching "forty winks." 5. Very wide awake indeed.

The Owl with the Expansive Countenance.

By THOMAS MALLOCH.

(See Photographs above.)

"WHAT'S the price of yon broad-faced chicken?" asked the simple-minded customer of the poultryman, on seeing for the first time an Owl, as it sat on the poultry-yard fence. Certainly the Owl's breadth of countenance cannot fail to attract notice, and the Tawny (or Brown or Wood) Owl is perhaps gifted in this respect more than any other of its British relatives.

Going through a fir-wood in the daytime, we may discover the roosting-place of one of these Owls, and as we look up through the branches we see the bird sitting close to the tree-stem, his form erect and narrow, and as still as a post. His large cloven head is turned in our direction, and he stares down with his great black eyes, unfathomable balls of liquid darkness set in twin saucers. Sometimes in a strong light the eyes have a glazed, unseeing stare, but this may change to a steady piercing look. There is a slow, deliberate wink of the big broad eyelids which is very funny to see. The head is lifted, turned, and set down facing in another direction; the impression given by the movement is that the object looked at has the bird's full attention. The head is averted, then swung round upon us, and we feel that we are looked upon, such is the concentration of that gaze.

Before taking to flight, the feathers are loosened and the bird assumes a rounder form; then the long wings are spread, seeming the longer on account of the short neck and tail, and with soundless movement he glides from his perch. His silent flight, although it may aid him in snatching his prey unawares, and enable him to hear while on the wing the rustle of a mouse, is soon made of no avail on this occasion by the alarm notes of the Missel Thrushes, Blackbirds, and Chaffinches, which announce his passage through the woods, until he finds another dark retreat in which to continue his interrupted slumbers.

As we go along a country road at dusk, when the big night moths are darting past on purring wings and the bats are circling round the fringe of the trees, we may see an Owl skim over the grain fields, top the hedge along the road, over the other hedge, and away across another field. Before disappearing it may rise against the sky to swoop down again, just giving us a chance to make sure that it is an Owl by a sight of its long rounded wings and short body, if its silent flight and dim colour have left us in any doubt.

The favourite nesting-place of the Tawny Owl is in a hollow tree. It may be some storm-broken trunk whose core has rotted out, leaving an outer shell standing, or the hollow which so often occurs at the division of the boughs in beech trees. Other sites, however, are sometimes chosen—a hole under an old bridge, a pigeon-cote, a cleft in the rocks, or even on the ground under a tree root.

No nest is made; in fact, the leaves which often fill up the hollow in autumn are all cleared out by the birds in spring before the eggs are laid. As many as five eggs may be laid, but three is a common number. They are white and almost round, not unlike golf balls.

The castings or pellets which Owls throw up will show the nature of their food, as will also occasional visits to the nest. The food provided for the young is varied, and may consist of a mole, a rat, any of the various species of mice, voles, or shrews; small bird, and even the hind quarters of a young rabbit, have been found. As twilight falls, the female Owl leaves her young and in a succession of short gliding flights, perching on branch, tree-stump, or rock, continues her way, calling softly as she goes. Soon she is answered by her mate from the other end of the plantation, and returning together they disappear into the darkening woods.

Sometimes an Owl shows considerable courage, when the nesting tree is visited at night, by dashing repeatedly close past the climber's head; yet the same bird in daylight tumbles out of the hole in a flurry and flies to some hiding-place to wait till the disturbance is over.

Strange sounds are made by these Owls, sometimes like the mewing of a cat, or again a loud and sudden cry that sounds amongst gloomy rocks in a startling manner; but the usual cry of a male bird is a single "hoo," then, after a long pause, a more elaborate rendering of the note, dying away in a long quiver. Very beautiful are these notes, especially when heard near at hand. They may be imitated, and the birds drawn from some distance, by an instrument made out of a piece of bamboo. This should be about an inch and three-eighths in thickness, such as is often used for curtain poles. Cut a piece two and three-quarter inches long, bore a hole with a centre-bit in the middle, seven-sixteenths of an inch in diameter. If the hole is not clean cut singe the edges with a red-hot wire or otherwise make them smooth. Glue a piece of wood on each end, and, when hard, round the ends over with rasp and glass paper. Blow across the hole as on a flute. By blowing more directly into the hole the note will become lower, and can be varied sufficiently to imitate the Owl by rolling the bamboo slightly. Before permanently closing up the ends the call should be tried, and for this reason should be made a little longer at first; the longer the tube the lower will be the note. When the call has been adjusted to the pitch of an Owl's note it may be found on another occasion to differ from that of some other Owl, for the pitch varies in different individuals.

This fact of Owls hooting in different keys was known to Gilbert White. It does not, however, prevent a bird from answering the call. The person using the call must be in hiding if the bird is expected to approach very near.

The white downy young of the Owls are very nice and soft to look at, but if interfered with they become all beaks and claws, turning over on their backs, hissing and snapping their bills, and defending themselves with their claws. If for photographic purposes the young have to be brought down the tree, a basket should be used, not a bag, as to put a young Owl into a bag with one hand while holding on with the other is a difficult undertaking; these ever-ready claws catch on to everything.

The unfailing regularity of the Owl's return to the same nesting quarters is a source of danger to the birds, but if we avoid observation in visiting them, and do not publish indiscriminately the whereabouts of their eggs or young, their family arrangements will furnish an annual treat with which to start many bird-nesting seasons.

DOMESTIC BLISS IN CANARY-LAND.

Cock and Hen Canaries, of what is known as the Norwich type, with their five young at about the age of a month.

Our Photographs, commencing at the top, and proceeding from left to right, depict—1 : The water fountain and a corner of the market, with a stand of cages and appliances. 2 : A portly vendor of Canaries convincing a working-man and his wife of the superiority of her birds. 3 : An interval for gossip, by the green-food stall. 4 : A general view of the market. 5 : A fair purveyor of Frill Canaries. 6 : A specialist in Parrots. 7 ; The "oldest inhabitant," who, judging by the pile of travelling boxes, does considerable business.

The Fertility of Canary Mules.

By JOAQUIN PANO (Monzén).

An account of interesting experiments carried out by a bird-loving reader in Spain.

HAVING read the most contradictory assertions about the prolificacy of Mules (or Hybrids) which the Canary produces when mated with other birds of the Finch tribe, I have undertaken, in the last seven years, a series of experiments in order to ascertain whether these Hybrids are prolific or not. For that purpose I had previously bred (and I went on breeding) many Mules from hen Canaries, and cock birds of the following European species :—Goldfinch (Carduelis elegans), Serin (Serinus hortulanus), Linnet (Linota cannabina), Redpoll (Linota rufescens), Siskin (Chrysomitris spinus), and Greenfinch (Ligurinus chloris) ; and the following African species :—Grey Singing Finch (Hypochera musica) and Green Singing Finch (Serinus icterus).

I have also tried to cross-breed from the Bullfinch (Pyrrhula europæa), the Citril Finch (Chrysomitris citrinela), the House and the Tree Sparrows (Passer domesticus and P. montanus), and from the American Saffron Finch (Sycalis flaveola) ; but I must confess I have not succeeded till now in my attempts. For my particular purpose, however, the mules obtained were the most interesting, since they sprang from species

A PUZZLE PICTURE.

A Wren's nest is seen in the lower half of the photograph, and upon this a Spotted Flycatcher has built her nest. Puzzle : Can you discern the young birds in the latter ?

most akin to the Canary, and consequently the chance of success in regard to their aptitude to fertilise eggs was the greatest.

By the way, I cannot help advising readers of CAGE BIRDS to Hybridise from the African Grey Singing Finch. Mules thus produced are very pretty, hardy, and lively little birds, and I know of no more exquisite and indefatigable songsters.

With my numerous Mules I began to try, and in my experiments, which extended over a period of seven years, cock Mules of every sort were mated with hen Canaries of pure breed. In all cases, with but one exception, which I will soon speak of, all these Mules (ardent lovers of hen Canaries as they generally are) proved unprolific. Several hen Mules of different varieties were also mated with cock Canaries, and the result was every time a failure. Only one—a hen Goldfinch-Canary—happened to lay eggs ; but they all proved unfertile.

The exception I have noticed above refers to the cock Serin-Canary Mule, the produce of the Canary (hen) and its most closely allied species, the Serin. Mules of this origin have fertilised the eggs of their mates every time. I have paired them with hen Canaries of pure breed. The offspring of these pairings is a new Hybrid having $\frac{3}{4}$ Canary blood and $\frac{1}{4}$ Serin blood, in colour sometimes greenish (like the Serin) sometimes yellow. These new Hybrids are smaller than true Canaries, and have shorter tails and bills.

Though it is by no means so easy to experiment with hens of wild Finches, I tried to mate one of my cock Serin-Canary Mules with a tame hen Serin which I had brought up by hand. A few days afterwards I found an egg on the bottom

An American bird-lover, Mr. T. A. Douglas, of Port Angeles, Washington, U.S.A.

of the cage, and this one and two more were placed under a hen Canary to be sat upon. The result was most satisfactory, for two birds ($\frac{1}{4}$ Canary blood and $\frac{3}{4}$ Serin blood) were hatched and reared successfully by their foster-mother. Twice more experiments of the same kind were equally successful.

In following years I paired several of these $\frac{3}{4}$ Canary-blood Mules, males as well as females, respectively with hen and cock Canaries of pure breed, and in all cases the matches proved prolific, giving birth, in their turns, to new Hybrids, having evidently $\frac{7}{8}$ Canary blood and only $\frac{1}{8}$ Serin blood.

As to whether the $\frac{3}{4}$-blood Hybrids would breed with each other, I experimented but once, and the result was a negative one. As regards the Hybrids having $\frac{7}{8}$ Canary blood, my numerous and varied experiments have led me to the conclusion that, in so far as their prolificacy is concerned, they behave entirely like true Canaries, from which, indeed, they are nearly indistinguishable in appearance. Male and female birds of this sort have bred freely with Canaries of pure breed and with $\frac{3}{4}$-blood Hybrids, and also with each other.

I even succeeded once in pairing a $\frac{7}{8}$-blood hen Mule to a cock Greenfinch. In due time three eggs were laid, one of which was fertilised ; but, unluckily, the queer nestling, to the origin of which three species had contributed, died as soon as it was hatched from the egg.

While experimenting, in order to prevent any doubt arising about the identity of birds which mated, each couple was paired in an independent breeding-cage.

My experiments having extended over a long period of time, I consider myself authorised to lay down the following conclusions :—

(1) There is but one Mule which proves really prolific, and that is the cock Serin-Canary. All the rest are, as a rule, unprolific, even when they are paired to birds of their pure parent stocks. This conclusion must not, however, be looked upon as absolutely true, since reliable examples (rare though they may be) are recorded of Goldfinch and Linnet cock Mules having fertilised Canary eggs.

(2) The Serin-Canary cock Mule breeds willingly with a mate of either of its parent stocks ; that is to say, with either a Serin or a Canary. Birds sprung from its match with a hen Canary are new Hybrids having $\frac{3}{4}$ Canary blood and $\frac{1}{4}$ Serin blood.

(3) These $\frac{3}{4}$ Canary blood Hybrids, males as well as females, breed with pure Canaries of the opposite sex, and the offspring is a new Hybrid having $\frac{7}{8}$ Canary blood and but $\frac{1}{8}$ Serin blood.

(4) Hybrids having $\frac{7}{8}$ Canary blood behave, as regards their aptitude to fertilise eggs, entirely like Canaries of pure breed, and even admit of being crossed with a third species.

I shall not put an end to this article without recalling to the reader's mind that the experimentalist in cross-breeding may meet with strange things. I will furnish my readers with a rather remarkable instance. I have a Hybrid cock Dove, the produce of a male domestic Pigeon (Columba livia and a female Turtle Dove (Turtur communis). This Hybrid paired, at first of its free will with a House Pigeon, but all the layings proved unfertile. A year later, however, I paired it to a female of the other parent stock, that is, to a Turtle Dove born in captivity, which soon set about egg-laying. To my astonishment I found one of the eggs to be fertile, and from it a bird was hatched which is very like the father, and is still in my aviaries.

THE WHITE WAGTAIL AT HOME.

(*Continued from page 411.*)

I had the Wagtails thoroughly "meated off" in about a fortnight, and turned them out, with the pair of adults which I had previously obtained from Belgium, in an outdoor aviary, and then I had the genuine pleasure of watching a little flock of birds of the sea-shore, consisting of five White Wagtails, five Lapland Buntings, and four Rock Pipits—a collection which had probably never before been brought together in any one aviary.

Wagtails may be divided, from an avicultural point of view, into two classes—those that do well in captivity, and those that do badly. The latter very quickly die, but the former develop into the most delightful and interesting inmates of an aviary. It was really grand to watch the Wagtails hawking flies. I have had some rather expert fly-catchers among my softbills during the past winter, such as Lesser Whitethroats, Blackstarts, Stonechats, and Pied and Spotted Fly-catchers, but not one of them could equal the Wagtails in dexterity.

Death to All Flies.

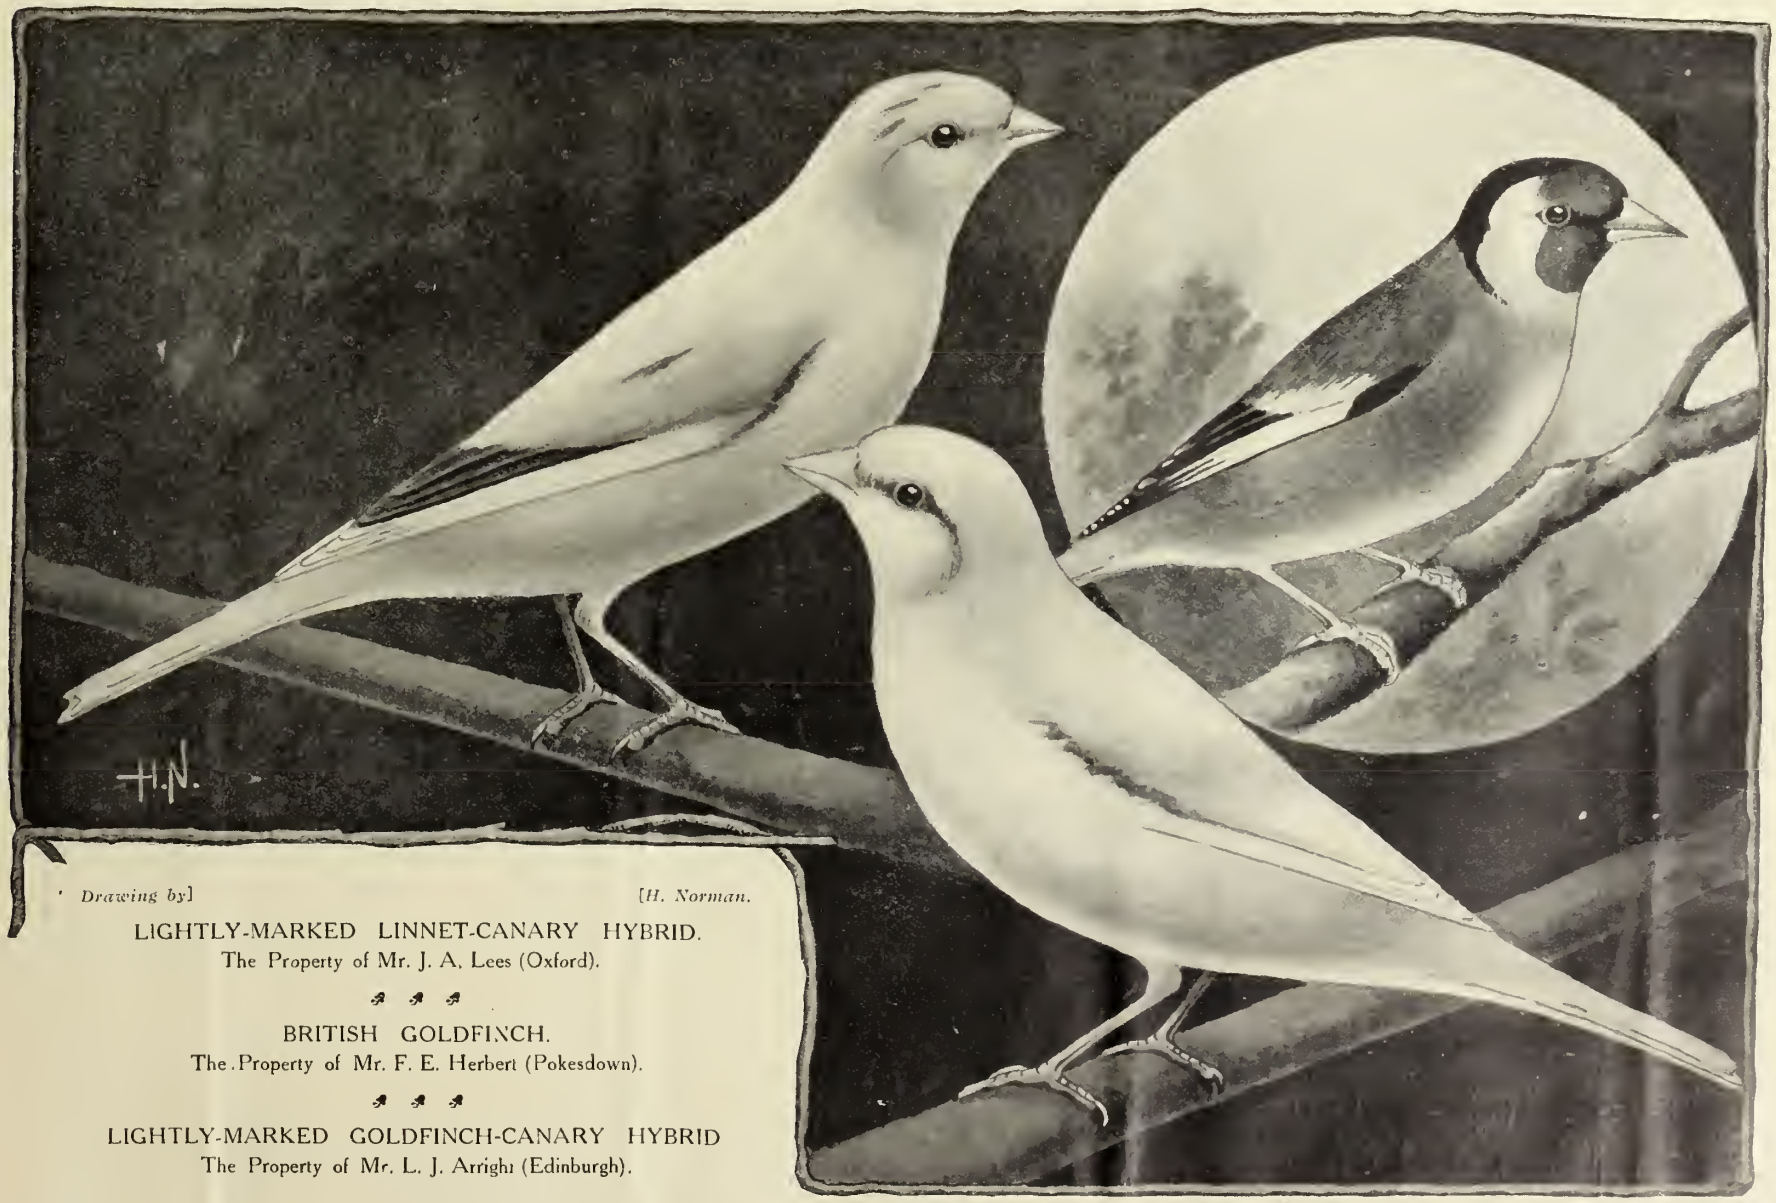
This particular aviary is arranged according to my own ideas. A narrow passage runs round two sides of it, something like a service-passage, but intended chiefly for purposes of observation. All shrubs and covert of all kinds are planted close up to this passage, so that one can watch any nesting operations from a distance of a few feet only. This leaves an absolutely clear and unobstructed space measuring 32 feet each way, and it was here the Wagtails used to give daily exhibitions of their skill in the art of fly-catching. A big blow-fly would skim heedlessly into the arena with a resounding hum; instantly a White Wagtail would spring lightly from the ground and like a flash of light would dart after it. Pursuer and pursued would traverse the length of the aviary in a bee-line, then they would shoot off at a tangent, then they would spin round and round in circles or wind in and out in figures-of-eight: sometimes the victim would, as a last resource, dash into a thick clump of rocks, but the pursuer would hurl itself after it like a Sparrow-hawk or a Blackbird; suddenly there would be an audible snap, and the victor would settle lightly on the ground with a graceful flickering of its long tail and, running daintily up to the victim, would swallow the latter with a gulp of satisfaction. Even in this fairly large space I was always in dread that the Wagtails would knock their brains out in their headlong pursuit, and, of course, in a small aviary such a flight would be impossible. At first I could never understand why they never swallowed the flies in the air, but always dropped them and returned to finish them off at their leisure, but I think the explanation is that in the excitement of the chase they do not know for certain what the insect is which they are pursuing—it might be a stinging-fly or even a bee; therefore they give it a sharp pinch and drop it. This suggestion is confirmed by the fact that they will sometimes leave the victim untouched after examining it.

The continual motion of the tail is very characteristic of this species. Have you ever asked yourself why a Wagtail wags its tail? This is not a conundrum on the same lines as "Why did the Owl 'owl?" but a little problem in bird-life. I daresay you may have noticed that the tails of many insectivorous birds are constantly in motion; the Redstart's tail quivers like the trembler of an induction coil; the short tail of the Stonechat is jerked up and down in a spasmodic kind of manner; and the Nightingale waves his tail slowly and deliberately. Probably the explanation is that most insectivorous birds have to start in pursuit of an insect at an instant's notice—if they lose the fraction of a second their chance is often gone, and, as we know, the muscles do not respond quickly to the nerve stimulus if they are at rest; but, if kept in a state of motion, they take up instantaneously the signal flashed to them from that mysterious brain-centre which controls our movements.

To my very great regret I lost in the course of the winter the adult pair of Wagtails; they did not seem to feel the cold, but as soon as our stock of live bait gave out and flies were unprocurable, they quickly drooped. The young White Wagtails, however, have done well, though even they seemed to feel the want of insect food much more than a young Pied Wagtail in the same aviary.

I have alluded to some points of difference in the autumn plumage of these two species, but there are also some facts in connection with the spring moult which have interested me. On the 25th February the young Pied showed two black feathers on its back, but there was no further change in the colour of the mantle for some time, and even to-day (16th April) there are still many grey feathers on its back. On the 28th February, however, it quite suddenly developed a black throat, and in the short space of four days the area of black was practically complete. As it could not well have replaced the feathers covering the throat in so short a time, the change of colour was probably attained by abrasion, that is, by the wearing away of the white tips of the old feathers.

A young White Wagtail, on the other hand, with regard to which I also made notes, moulted the feathers of its back first during the month of March, and it was not till the 7th April that I noticed any new black feathers on the throat. Moreover, the latter have appeared gradually and apparently by an actual moult. To put the matter briefly, unless I am mistaken young Pied Wagtails acquire their black throats before they get their black backs, the former by abrasion and the latter by a moult, whereas young White Wagtails get their (adult) grey backs before they get their black throats, and in each case apparently by an actual moult.



The above suggestion requires verifying, which can only be done by observing the progress of the moult in a cage, where the bird can be constantly and conveniently handled, this, of course, not being possible in a large aviary. I hope, if any of my readers are lucky enough to catch a White Wagtail, they will observe its spring moult carefully, and correct my observation, if necessary.

And now that you and I, reader, have studied White Wagtails under the varying conditions of the changing seasons for a whole year, we may attempt to answer the question which was asked at the commencement of this paper—namely, Why does not this species normally breed and spend the winter in Great Britain?

THREE WELL-KNOWN FACES AT THE EXHIBITIONS.

THE CAMERA IN THE CAGE-BIRD FANCY.

1 : The opening ceremony at the annual exhibition of the York C.B.S. 2 : The outdoor birdroom and flight of one of Yorkshire's best-known breeders Mr. "Jim" Overend (Ravensthorpe). 3 : Another Yorkshire enthusiast, Mr. John H. Jowett (Bradford), who is also a comedian, and is here seen singing "The Happy Wedding." 4 : Mr. Overend training his Yorkshire Canaries to "stand" properly in a show-cage. 5 : The officials of the Liverpool O.S. Standing (left to right), Messrs. J. H. Isaac, T. Rowlands, G. Benson, W. C. Carswell, G. Western, and T. Murray-Jones. Sitting : Messrs. J. W. Cutmore, V. H. Deacon, C. Hillmen, G. B. Daniels (Chairman), J. W. Metcalfe (Sec.) and son, W. Hales, and E. Lawson. 6 : Mr. Jas. Clarke (Rothesay) and a few of his winning British birds. 7 : Mr. John H. Jowett shorn of "the motley." 8 : Mr. E. Marlor, senr., father of the well-known Manchester fanciers and exhibitors, Messrs. Marlor Bros. 9 : The outdoor aviary of Mr. T. H. Black (Lurgan), who is seen accompanied by his favourite dog. 10 : At the Rochdale Good Intent Society's annual show. In the middle row are seen Messrs. R. Barrass (Judge), T. H. Collinge (Pres.), and W. Leach. Side row : Messrs. S. M. Clayton (Sec.), H. W. Battye (Judge), R. R. Gaskill, and E. Porter.

SHOW DATES FIXED.

To secure insertion in this column, a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.

*Under the rules of the C.B. Union.

England.

*Sept. 23 & 24.—**Lancaster Primrose.**—(J. H. Naylor, 6, Mary Street), W.M., S.M.,

SOME SEASONABLE HINTS FROM AN "OLD HAND."

Too much material can now hardly be given to hens for shell-forming and bone-making, and the following are very cheap and useful. Egg-shells thoroughly dried in the oven, and crushed while still warm, either by pounding with a piece of hard wood or put through an egg mill; but be sure to make it moderately fine, and by being very dry they powder more easily, to add to sand or be thrown a little daily in cage corner. Burnt bones are fine and are best prepared as follows: Late at night, when the fire is getting low, put a few hard bones on the red embers, then before lighting the fire in the morning take them out and they will be found to be burnt through without being wasted by being broken up; in each cage put a moderate-sized piece, and you will be surprised to see how much the birds will enjoy picking at them, especially the hens, and it will do them good—no overgrown beaks.

Points About Nesting Materials.

Old dried grass is very good for nesting, and is preferred by many before moss; the latter is usually too dry and breaks up too much. I have seen hens that built a good nest of moss have it all in a powder before the young were due; grass is better for this, and the hens can make a good nest with it, and now is the time to gather it. Take a walk in the fields, and you will be sure to find some tufts of last year's grass that is dead and dry; pull it up, wash it well, lay out in the sun to dry, put a little in between the hands, give it a good rub, same as you would rub up a pipe of tobacco, place between the wires, and the hens will pull away at it and soon make a neat nest; then a little cow hair or other material to line it with can be given, and a real, substantial, warm nest is the result.

Many fanciers use hempen twine or rope, which can be easily pulled into fluff for lining nests, but in my opinion any animal fibre is to be preferred to vegetable fibre for this purpose. All vegetable fibres will take up liquid very quickly, and should the youngsters during the first week have the faintest touch of diarrhoea, the nest will absorb part and be wet and sloppy in a very short time, whereas if cow-hair is used the matter will not soak into the material, and the hen will have a much better chance to clear it off and keep the nest sweet and clean.

The using of the above-named has caused many hens to be accused of being bad feeders, when in reality they were good feeders, and their failure the result of wrong attentions. I have seen many, many nests "going back" and the hens blamed for it, when really the fault was in the looseness of the bowels.

During the first seven to ten days very great care should be used to prevent the excreta of the young birds getting at all "thin," as, should it do so, the hen cannot clean it up, and the young get in a dirty condition, find it impossible to keep the passage clear, and instead of thriving, they get considerably less and gradually fade away and die. A too sudden change of food will often have this result, therefore great care should be taken during the first and most important part of a bird's existence; they are really made in the first 10-14 days.

"STRAIGHT UN."

Meating-Off and Feeding Softbills

By JOHN FROSTICK.

No lover of insectivorous birds who wishes to succeed in his hobby can afford to be without a copy of this practical Handbook. It also contains notes on Bird Trapping, Cages, etc.

Price 6½d. (postal order) post free, from CAGE BIRDS, 154, Fleet Street, London, E.C.

Part 1. Out To-day.

"OUR CANARIES."

By CLAUDE ST. JOHN, with C. A. HOUSE and G. E. WESTON as Associate Editors, assisted by numerous well-known breeders of the different varieties of Canaries.

Published in Monthly Parts, SIXPENCE EACH.

THE STANDARD WORK ON CANARIES.

This work, which is utterly unlike anything that has ever been published, is designed in such a manner that it will form a standard work which no breeder or keeper of any variety of Canary can afford to miss.

It is eminently authoritative and always intensely practical, and while being well illustrated it is not a work of pictures only. Each part will contain 2 Coloured and 2 Art Plates by that champion Canary artist, **Mr. H NORMAN,** and every plate will depict a **STANDARD BIRD** in every respect.

So complete is the scope of this work that the reader with but one bird will find it as absorbingly interesting as the exhibitor with an aviary or bird-room.

PART 1. NOW READY, CONTAINS TWO SUPERB COLOURED PLATES: ONE DEPICTING THE ORIGINAL WILD CANARY AND ALL THE DIFFERENT DOMESTICATED VARIETIES OF THE CANARY, AND THE OTHER A TYPICAL YORKSHIRE CANARY.

Order your copy at once from your newsagent, or fill in the Order Form below and we will send you one packed flat in cardboard for **6d. Postal Order.**

Have you purchased PART ONE of the Standard Work on Hybrids? IT IS NOW READY, and is Selling fast!

"CAGE BIRD HYBRIDS"

—BY—

CHARLES HOULTON.

Associate Editors of the work: G. E. Weston and C. A. House.

Published in 8 Monthly Parts - - SIXPENCE EACH.

Two Coloured and Two Art Plates with each part.

This is not a work whose excellence begins and ends with the superficial attractions of good paper and plenty of half-tone illustrations, but is a standard work, written by an acknowledged expert, and prepared for publication by experts.

It has been designed not from the standpoint of attracting the pence of the general public, but as a soberly, authoritative and carefully practical work, embodying in the simplest and most straightforward language all that there is to be known on this peculiarly difficult and scientific subject.

There are no less than sixteen coloured plates. **EACH PLATE IS A PERFECT STUDY OF AN INDIVIDUAL HYBRID**—not a pretty group suitable for a children's picture-book, but a plate that shows the correct colour, the correct shape, the present-day type and general characteristics of modern hybrids.

The successful fancier is nothing if not practical, and to achieve success in hybrid breeding it is necessary, above all things, to be practical. The practical man wants a practical book, not a picture book.

It will, we feel sure, be generally conceded that CAGE BIRDS has produced in

"CAGE BIRD HYBRIDS"

a dignified book on a difficult subject—a standard work of the highest merit and a fitting monument of the hybrid breeder's art.

PART 1. IS NOW ON SALE CONTAINING TWO MAGNIFICENT COLOURED PLATES—THE GREENFINCH-BULLFINCH AND THE LINNET-BULLFINCH—AT MOST OF THE LEADING BOOKSTALLS AND NEWSAGENTS, OR WE CAN SEND IT TO YOU PACKED FLAT IN CARDBOARD POST FREE FOR 6d. POSTAL ORDER.

FOR 4/- PREPAID WE WILL TAKE ORDERS TO SUPPLY THE COMPLETE WORK (IN PARTS AS PUBLISHED). FILL UP THE ORDER FORM BELOW AND SEND WITH REMITTANCE AT ONCE.

Questions and Answers.

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following Conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaints written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence, otherwise their letters will not receive attention. All the fees received from this source will be handed over in full to the "Referee's" Poor Children's Dinner Fund (London).*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Canaries.—**Claude St. John.** British Birds, Mules and Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c., Park and Lake Aviculture—**Frank Finn,** B.A., F.Z.S. M.B.O.U., &c. Wild Bird Life—**H. Norman.**

NOTE.—If an answer is required concerning the proper mating, etc. of Norwich, Yorkshires, Crests, Cinnamons, Greens, Borders, Lizards, Scotch or any other variety of the Canary family, we shall, should the querist desire us to do so, be pleased to submit his question for answer to some leading specialist of the day on the variety concerned.

CANARY QUERIES.

Answered by CLAUDE ST. JOHN.

Moulting and Not Singing.

F. Holmes.—See the cage is not kept where the bird is exposed to the draughts and fluctuations of doors or windows, nor near burning lights. Keep it in a cosy place, but well ventilated, and not overheated, nor yet on the cold side. Continue to supply the bath three or four times a week. Feed on a mixture of three parts Canary to one part summer rape as a staple. Every second day for a month give half a teaspoonful of crushed stale sponge cake, with a pinch of maw mixed in it, and vary this occasionally with a small piece of bread and milk sprinkled with soft sugar. On the alternate days give half a teaspoonful of hemp, and twice a week a few grains of linseed. Give a spray of chickweed or a leaf or two of dandelion daily. In the drinking water give six drops of syrup of buckthorn daily for three days, and after that twenty drops of chemical food every second for a month. The bird will not resume its full song until the moult is finished, so it is useless expecting this. To cure the nervousness gradually bring its cage into a position where it will frequently see people moving about near it, and where it will be frequently passed. The escape from the cage would have nothing at all to do with the moulting.

Two Points.

Conn. Roller.—1. If you had the birds in box cages, which are far the best, and kept them well away from the rauge, but where they would be quite free from draughts, so that the difference between day and night temperature would be reduced to a minimum, there would be no necessity to cover the cages at night. But if you continue to keep them in the open wire cages there can be no harm in covering them during the winter months, if not all the year round. The amount of space left for ventilation might, however, be increased. A slit an inch in depth, and running across about three-fourths the width of the cage at the top, back and front, would be far better. 2. You would want a good free singing Roller, without any faulty notes, to teach the young cocks to sing, as in order to give them the best possible tuition the young males should be moved right away from the hens and the parents if they are going to nest again, and kept where they can hear no other bird sounds save the tutor, which is the good Roller just referred to. For the first few weeks they should have a light cover hung over the front of the cages to keep them quiet, and limit their attention more exclusively to the singing of the cock. If the male parent is at liberty to remove with the young cocks, he will, of course, serve just as well as an extra bird for a tutor; but it is very risky to depend upon him solely if you want the birds taught for early disposal. A bird organ is a very useful ally in training young birds, but it would scarcely be worth the outlay to teach a few birds.

A Disappointing Pair.

T. Gauld.—Your feeding is wrong, and may be the sole cause. If you now have them together, separate them at once. Keep them in box cages in a comfortable place, not overheated, but quite free from draughts and great extremes of temperature. See they are where the air is always pure and fresh; keep cages strewn with clean gritty sand, and see they are quite free from insect pests. Feed the hen on a mixture of three-parts Canary to one part summer rape as staple. Twice each week give half a teaspoonful of a mixture of equal parts hemp, teazle, and black rape, and on two other days a piece of stale bread the size of a hazel nut soaked in cold milk, drained, sprinkled with soft sugar, and a pinch of gold of pleasure on top. Give a spray of chickweed or dandelion leaf daily. In the drinking water give six drops of syrup of rhubarb and a pinch of Epsom salts for two days, and afterwards six drops of tincture of gentian and four of aromatic sulphuric acid every second day for a week. Am afraid the cock will do no good. Feed on same seed diet as the hen, but give the bread and milk every second day for a week; then stop it, and give instead half a teaspoonful of crushed sponge-cake with four drops of sherry and two of cod liver oil emulsion mixed in it twice a week. Give the rhubarb and salts daily for three days, and after that give 20 drops of chemical food in the water every second day for a fortnight, and on the alternate days in the first week give the gentian and acid as advised for the hen.

Wheezy and Insects.

J. H., Leeds.—The insects are the grey louse, which not infrequently attacks ailing weakly birds in hordes. Catch the bird and with a small puff or powder bellows fill the plumage, especially around the base of the neck and tail, with freshly ground pyrethrum powder. Wrap the bird securely in a small handkerchief, leaving only the beak free for breathing, and lay the bird inside a spare cage for a quarter of an hour. During this time clean out its cage thoroughly and wash it inside with a fairly strong solution of izal. At the end of the time named unroll the bird and release it, and let it stay in the spare cage for a short time to shake itself free of the dust and as many insects as possible. Give a bath with a few drops of esseuce of quassia in before returning the bird to its usual cage. Well clean the spare cage afterwards. Repeat the process several times at intervals of four or five days until insects are quite eradicated. In addition to the staple of Canary and rape, give a half-teaspoonful of crushed sponge cake with four drops of sherry and two of cod liver oil emulsion mixed in it twice each week for a month; on two other days give an equivalent quantity of bread and milk sprinkled with soft sugar, and on two other days a pinch of a mixture of hemp, inga, teazle, and linseed. Give a spray of chickweed daily, and add twenty drops of chemical food to the water every second day for a fortnight.

Treatment of Young.

R.H.S.N.—The condition is due to diarrhœa, and is often the forerunner of what is known as sweating in the hen. There may be something wrong with your manner of preparing the egg-food, or with the eggs perhaps. You do not say how you prepare it. See that your eggs are new laid, and that they are laid by quite healthy, well-fed and kept fowls. Boil the eggs about fifteen minutes, and when quite cold, break open, and mince finely sufficient for use. If the whole egg is too much, cut it across with a clean cut, taking off sufficient for your need, and turn the other cut surface downwards on a clean plate, cover over with fine meal, and it will keep fit for use until next day. Give the yolk only the first day, after that mix with it crushed biscuit, or bread crumbs in increasing proportions until it reaches twice the amount of pure egg. Give only very small quantities at a time until the young are a few days old, and renew the supply frequently—three or four times a day, if possible. Do not give green-food until the third or fourth day after hatching, and if there appears any of these signs of moisture about the young, at once give a little dry crushed plain biscuit, and a little cracked hemp. This should correct it. When the young are ready to leave their parents it would be best to separate them by a wire partition to prevent the young interfering with the nesting arrangements during the second round. For feeding, see several replies in detail a fortnight and three weeks back.

To Start a Strain of Sibs.

Sibs.—It is not too late to begin if you can get suitable birds. But you must not expect to finish the task this year. If you get a really reliable strain of hens to throw light coloured mules in ten years hence you will not have done very badly. Get a clear-bodied pink-eyed buff Yorkshire hen. If it is a stoutish bird, not altogether innocent of Lancashire blood, but free from browing, so much the better. Mate her with a good sized clear yellow Norwich, as rich in natural colour as possible, and bred from clear parents. Rear all the young you can from these in two rounds this year. Next year mate up first pair: a clear buff young hen with the Norwich cock, and second pair: a ticked yellow cock with the original hen. Mate up a third pair with a ticked and a clear, yellow and a buff, from amongst the remaining young, which, of course, will be brother and sister. Select the strongest and most vigorous birds only for mating, and discard the remainder. In the third season mate the young cocks from the third pair with hens from the first pair, and the hens from the third pair with cocks from the second pair, still keeping about two birds in each three pairs lightly ticked, and adhering to the healthy and most robust birds. In this season you should mate the original pair together again if still on the active list, to save getting fresh alien blood the following season. You may also begin in this third season to test the hens by mating them with Finches after taking a first nest of pure Canaries from them, in order to see which throw light feathers or show the strongest tendency in that direction, and, of course, you must be guided from this point chiefly by these test matings, always keeping for future use those hens which show the most pronounced tendency to throw light coloured mules, and still persevering on the lines of the above matings, and rejecting as far as possible all birds showing a weakly habit, and very puny specimens. Introduce fresh blood as little as possible, and always go back to the original stock for it as long as a suitable bird can be obtained from them.

We are Seven.

Wolf.—(1) The correct way is to follow Nature's example and lay the eggs on the sides. It is not essential to exclude all light, but no harm can result from half covering the eggs with bran, and placing a little cotton wool on top. Keep them in a cool place, neither decidedly warm nor cold. Turn the eggs half over morning and night, or at least once in 24 hours. (2) I do not think it advisable to try to rear birds on egg only if by that you mean pure egg without any admixture of bread or biscuit. I would only recommend you to attempt it as an experiment. You would probably lose the young from diarrhœa. No, you must not add salt to the food. (3) Of course, you cannot get the eggs from a single cage without inserting your hand and frightening the birds, unless you happen to have cages with doors at the sides giving access to nests. If gently done, there is not a great amount of disturbance anyway. (4) Cold-room bred is rather a misnomer, which should be cold-room kept, meaning birds that are not only bred but kept regularly in a room without the aid of artificial heat. It is not unknown for one to attempt to make capital out of this misnomer when hard-up for an argument. All birds are not bred in the warm weather. Hundreds of young are already bred this year; and where is the warm weather? (5) This question has been answered several times of late. Unflighted means a bird that is still in possession of the flight and tail feathers produced in the nest. These feathers are not lost at the first moult, but are sometimes removed, when the bird is said to have been flighted. The advantage of buying unflighted birds is that you are certain of having young ones. There can be no serious disadvantages. (6) An "untried" bird is, or should be, one that has not been put up for breeding to test its value as a breeding bird. If you buy one that has been tried and proved itself a good breeder and excellent parent, that's the advantage; if you buy one that has been rejected as a vicious or non-feeding parent, that's the disadvantage. See? You want to buy fresh stock fairly early to ensure the birds not having been tried. (7) The cock that pants, as you say, is only a little "deeper in love," shall we say, than the other one. Some birds will act like this one time, and show no effect another.

Brevities.

Losing Feathers (S.E.E.).—You should have said how the bird was fed and treated. See both cage and bird are free from insect pests, and follow advice as to feeding and treatment given to "F. Holmes." Allow the bird to bathe freely, and paint the bare place once each week for a month with a mixture of equal parts glycerine and perchloride of iron. Do not soil the surrounding feathers. Shall be glad to hear result in a month.

An Incubator (V.N.P.).—Sorry I cannot give you the particulars asked for. I am not aware of any case of Canaries' eggs being hatched in an incubator. As to whether it is practicable, so far as the mere hatching of the eggs is concerned I should anticipate no difficulty whatever in an incubator of the usual type of to-day, but on a miniature scale. But what about feeding and rearing the young after hatching had been successfully brought about? This is where the impracticability of the scheme come in.

The Cause of It (Gedney).—Sheer cussedness. That is what I should say was the cause of the hen never attempting to sit. You cannot reason with such. Distribute the eggs amongst other hens with small clutches which are commencing to sit. If the second hen is not anxious to start nesting sooner do not trouble to return the cock until the young are old enough to remove to a nursery cage in case he does not take kindly to them. See "General" replies re advertisement.

Three (Semen).—(1) Sample No. 1 is rather small, but of good sound quality, and better than No. 2, which is of variable quality, and not so good at its best. (2) The preparation you name, "liquor fricia carbonic B.P." is one and the same thing as "solution of coal tar," which is sometimes advertised in our columns. There was a little flutter in favour of it as a remedy for colds and bronchitis in birds a little while ago. (3) Yes, "Seeds, Foods, and Wild Plants for Cage Birds" is what you want. Our manager will send it you for 1s. 2d., post free.

Foster Parents (H.E.N.).—If the hens have been proved good feeders, by all means transfer the fertile eggs to one or both of them a day or two before they are due to hatch, as the parent of the fertile eggs has proved unreliable. It will be wisest to give one hen two and the other three of the good eggs, in order to keep both hens going to provide against any contingency. Also give three or four

Canary Querists should send to our publisher for "Canary Breeding for Beginners," 7d.; "House's Canary Manual," 1/2; and "Yorkshire Canaries," 1/-, post free.

of the unfertile eggs to the other hen to keep her sitting until a day or two after the young are hatched as a last precaution. The fact that the two hens have not been mated will not prevent their rearing young, seeing they have built and laid eggs.

A Hen and a Tragedy (H.A.G.).—(1) The hen is not egg-bound. The actions are simply to court the favour of the male. If he pays no attention to her at such times he is far from being in good breeding condition. Feed him up a little. (2) Was the cock left in the cage with this hen, and did you handle the young when you saw them just before the tragedy. The latter might have induced a nervous or excitable parent to commit the deed, and either the cock or the hen might be the culprit. But I should suspect the cock, if he were present, especially if he is in fresh condition for going to nest again. Next time remove him when the hen begins to sit, and let her hatch and rear the young by herself. If the same thing happens then, you can only look around and get a reliable pair of feeders for the next brood, if you want to get young off this hen.

Hen Panting (Imprimatur).—If the hen was in this condition before mating, it was quite useless wasting time with her. If she shows no signs of making further progress now, separate her from the cock for a fortnight and take away the nest. Feed her on a staple of three parts canary to one part summer rape. Every second day give a small piece of bread and milk sprinkled with soft sugar and a pinch of gold of pleasure seed, and on the alternate days half a teaspoonful of a mixture of equal parts hemp and inga. Give two leaves of dandelion or a spray of chickweed daily. In the drinking water give a pinch of Epsom salts and six drops of lemon juice daily for three days, and after this six drops of tincture of gentian and three of aromatic sulphuric acid every second day for a week. If the hen is then in good condition you may try mating her again as soon as she appears to be ready. If she should seem to be getting nearer laying, however, and calls to the cock, do not separate them, but feed the pair on the above lines and omit the medicines in the water.

A Trio (Ajax).—(1) If the bird is perfectly healthy and has not suffered from exposure to draughts, I suspect the only reason it has not resumed its song is that it is waiting for the spring to get a little more pronounced. See it is not troubled with insect pests. Keep it in a bright and comfortable position, and in addition to its usual seed give a piece of bread about the size of a hazel nut soaked in milk, drained, sprinkled with soft sugar, and a pinch of gold of pleasure seed on top twice a week for a month. On two other days give half a teaspoonful of a mixture of equal parts hemp, inga, and teazle. Give two dandelion leaves daily. In the drinking water give twenty drops of whisky, ten of glycerine, and half a chlorate of potash lozenge every second day for a week. (2) The seeds are preferred, but the leaves are also more or less favoured. The creepy things about the whole plant are as good as all the other parts together and as much in favour by the birds. (3) No, it is not charlock. It looks like a bit of poultry corn, in which case the bulk of it is buckwheat with a few stray grains of tares, tick beans, and split peas. If it is really wild seeds, or waste from a machine, the bulk of it is seeds of the Black Bendweed—a real farmers' pest.

Bad Plumage (G. P. L.).—First see the bird is kept quite free from draughts and rapid extremes of heat and cold. Examine the cage carefully to see if there are any red mites and, if so, exterminate them. Keep in a comfortable and fairly equable, but not necessarily very warm, temperature. Feed on a staple mixture of three parts canary to one part summer rape. In addition, give twice each week for a month half a teaspoonful of crushed stale sponge cake with two drops of cod liver oil emulsion mixed in it and sprinkled with maw seed. On two other days give an equivalent quantity of bread soaked in cold milk, drained, and dusted with flowers of sulphur, chlorate of potash, and lastly with soft sugar. Give a spray of chickweed, watercress, or leaf of dandelion daily. Limit the diet to this for a month. See that the cage is kept strewn with clean gritty sand. In the drinking water give a pinch of Epsom salts and six drops of lemon juice every second day for a week, and after that twenty drops of chemical food every alternate day for a fortnight.

Young Dying ("Yorks.").—I cannot name the cause unless the bird was a day or two younger than the rest of the clutch. It is not uncommon for the youngest bird of a clutch hatched day by day to hold its own sufficiently to thrive fairly up to about a week old, and then go under. The fact of its abdomen being dark coloured may mean nothing at all, as this would occur in a very short time after death in any case. By following the instructions you say you did to the letter, there can be no question of improper feeding. You did quite right to let the staple supply of canary seed remain during the nesting and rearing period. Instead of plain canary, however, it should be a mixture of three parts canary to one part summer rape at this time.

Canary Hens (R. G.).—Your diet is not sufficiently generous. In addition to the staple of canary and rape seed, give half a teaspoonful of egg food with a pinch of a mixture of sesame and gold of pleasure mixed in it to each hen every second day, and on the alternating days give half a teaspoonful of a mixture of equal parts hemp, inga, teazle, and linseed. Every day give two leaves of crisp young dandelion or a spray of chickweed. In the drinking water give six drops of syrup of buckthorn for three days, and after that give six drops of tincture of gentian and three of tincture of steel every second day for a week.

To Tell the Sex (B. G. H.).—In the circumstances given your best plan is to hear the bird sing, and rely upon that as a test of sex. A hen may make some attempt at singing, but it is not often more than a twitter, more or less sustained, often rendered when sitting still, and there is but little perceptible movement of the throat. The voice of the cock is more clear, dominant, and powerful, and there is more modulation of the voice, the trills, rather than twitterings, being more sustained and unbroken. The throat also swells out and pulsates in a very marked manner whilst the bird is singing. All the other external signs are merely comparative. The cocks have a bolder and more pushful manner generally. You would find the differences illustrated in "Canary Breeding for Beginners," 7d. post free from our Manager.

Hen Dragging Out Young (W.T.H.).—This is sometimes due to the hen's claws being overgrown, so that the young get entangled with them whilst the hen is on the nest, and are accidentally dragged out when she comes off to feed. See that the claws are properly trimmed before she goes to nest again. They may also meet the same fate by the hen leaving the nest too hastily after sitting on the young for a time. Do not interfere with her any more than possible, and avoid driving her off the nest or causing her any unnecessary excitement. Just take a glance over the cage bottom every morning and once or twice during the day to see if any young have been dragged out, and, if so, return them to the nest if fairly lively; but if cold and inactive, warm them between your palms in front of the fire until some show of life returns before replacing them in the nest. If it is repeated time after time, your best plan is to get a more careful foster-mother to rear the young.

Chucking (Nemo).—I should say this bird is feeling the effect either of draughts or fluctuations of heat and cold. Try to remedy this and see that it is kept in a fairly equable place. Give a mixture of three parts canary to one part summer rape as staple. Every second day give a small piece of bread and milk sprinkled with soft sugar, and a little green food—chickweed or dandelion—daily. Continue this for a fortnight, after which, if the bird is better, go on to the usual diet frequently given here. In the drinking water give six drops of syrup of rhubarb and as much Epsom salts as will cover a sixpence, for two days. After this give six drops of tincture of gentian and three of tincture of steel every second day for a week, and on the alternate days twenty drops of whisky, six of oxymel of squills, and two of eucalyptus oil well shaken together.

Warring Elements (W. E. E.).—The hen is late in coming into condition, and it was useless your trying to mate her until she showed more readiness. Now, however, you had best leave them alone and exercise patience, when things will probably come right in the end. As regards their diet, if you mean that you have altered the staple diet to the mixture of hemp, inga, etc., you name, you have done wrong. Give three parts canary and one part of summer rape as staple, and the mixture you name use in addition, giving a small teaspoonful only every second day to the pair. On the alternate days give a similar quantity of egg food, and give four dandelion leaves to the pair daily.

Rearing Young and Croaking (First Time).—(1) Yes, you can certainly rear young on either of the foods you mention. In the case of the first-named you may add half its bulk of crushed plain biscuits after the first week. Chickweed, groundsel, lettuce, or watercress is much preferable to dandelion when rearing young. (2) Am afraid you will get poor results from this cock. Remove him to a cage by himself and let the hen hatch and rear the young by herself. Feed him on a mixture of three parts canary to one part summer rape as staple. Twice a week for a month give half a teaspoonful of crushed sponge cake, with four drops of sherry and two of cod liver oil emulsion mixed in it and sprinkled with gold of pleasure seed. On two other days give a scrap of bread and milk sprinkled with soft sugar. Every day give a little chickweed or dandelion. In the drinking water give a pinch of Epsom salts and six drops of lemon juice daily for three days, and afterwards give twenty drops of whisky, six of oxymel of squills, and two of eucalyptus oil, well shaken together two days in every three for a week, and every second day for another week after.

The Colour Feeding of Canaries

AND OTHER BIRDS.

By J. W. RAMSDEN.

A handbook which tells you how to mix the colour-food, and how to moult the birds to get the richest possible colour. Price 3½d. post free from

CAGE BIRDS, 154, Fleet Street, London, E.C.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. Weston.

Backward Hens.

Hard Times.—It is odd that your hens should be backward in coming into breeding condition. Did they moult well; and have they wintered well? Important points, these. It is, however, much too early in the season to let "cries and lamentations" be heard; you have plenty of time yet. And the weather (wretched creature) has been far from kind. Put a piece of cuttlefish between the bars of the cages. Give a teaspoonful of egg food every day to each bird, also let the hens have a few small tender dandelion leaves, also seeding heads, every day. Also mix maw, hemp, and niger seeds in equal parts; put a teaspoonful in the cage each day. This treatment should soon put a different complexion on matters, especially if the south wind and the sun should by any chance come to stay amongst us. The chemical food is good; but I would feel inclined to try saccharated carbonate of iron, as recommended by Mr. Yates. It is a fine tonic, readily taken by the birds. Get a small supply from a chemist, and mix three grains (he will show you how much this represents) in each teaspoonful of egg-food.

Storing Dandelion Seed.

P.A.T.—You will find it necessary to gather a great number of seeding heads to obtain the 3 or 4 lbs. of dandelion seed you say you are desirous of storing. One can go out daily during the weeks the dandelion heads are "ahlow," and make sure of finding on every journey quantities fit for pulling. I do not know the method adopted by "professional" gatherers for getting the seed from the heads; but the method I myself adopt is a simple one, yet at the same time effective. Only really ripe heads are gathered—just as they form "clocks," and are ready to blow—and these are dropped into a capacious brown-paper bag. The latter is given a good shaking up, when the ripe seed drops to the bottom, and the "fluff," etc., can be taken out by the hand and deposited in the dustbin, or be burnt in the garden. The seed can then be placed in a fine sieve, and other waste particles be blown away off the top, after which it can be stored away. Tins can be used for the latter purpose, though sack or coarse linen bags are best—providing the room is dry—giving them an occasional shaking up. Thistle and other wild seeds can also be collected and stored by adopting a similar procedure. The seed must be spread out for a period (to dry) before being put away.

Early Linnet Mules.

Starter.—A rare good starter you seem to be, too. Pleased to know my method of feeding got your Linnet so quickly into vigorous breeding condition. Four Linnet mules well on the "sticks" is not bad for the middle of April. Yes; you can fairly safely count on the biggest youngsters turning out to be the cocks. This is not a certain guide to the sex, however. As the mother is a "big, good chested and headed yellow Norwich," the mules may quite likely grow into show-birds. The absolutely essential points of a good exhibition dark Linnet Mule are size, substance, and shape. All the noted champions are very big birds indeed, some of them looking almost twice as large as a really big Linnet. Even the jonque (yellow) Linnet Mules are of great size nowadays. So it is safe to say that without size (or length) and substance such a bird is of little use in decent competition. A good wide head and broad chest are necessary items. The next point is colour. This should be as near rich dark brown as possible, brightened by what one might term the Canary colour, though in a dark Mule there must be no actual light feathers anywhere, only a shading away to silvery whiteness near the vent (or under tail coverts). Light feathers anywhere debar a bird from competing as a dark Mule. The abóvo are the chief points, though marking (pencilling) must not be forgotten; this, however, is invariably good in mules bred from Norwich hens.

Suitable Wild Seeds.

Tollie.—No doubt there are scores of "wild seeds" (the seeds of weeds found in fields and lanes) which are eaten with avidity by Linnets (and other Finches, too). But it is not necessary to bother about every one of these (even if we could name them). Fanciers know of quite sufficient, I am sure, for all practical purposes, and I always recommend those which I know can be widely obtained—that is, by anyone who can get out into the country. Our old friend shepherd's purse is the most generally liked of all wild seeds by Linnets, and many other birds. Then we have plantain, wild mustard (charlock), chickweed, knot grass, groundsel tops, hardheads, the various thistles, dock, various grass seeds, etc. Here you have a fairly lengthy and complete list of easily obtainable and easily recognisable wild seeds, and not for Linnets alone, but for all British seed-eaters. Many of them are easily obtained in the residue from threshing machines. Or you can get them sent to your door—and very cheaply, too—as "wild seed mixture," by many advertisers who use the columns of Cage Birds. You are quite right in giving them a trial. The fancier who uses the above freely through the breeding season moult has a big pull over his brother fancier, who, perhaps, finds it too much of a "fag" to go out and get them. Read Cage Birds book on "Wild Plants" for illustrations and descriptions.

"Meating Off" Small Softbills.

Temporar.—The best way to "meat off" Nightingales, and other Softbills of about the same size, is by means of mealworms—the latter are widely obtainable, unlike certain other live-foods. I presume you know that usually it is necessary to put the bird's cage in a light spot, and cover the cage front with muslin, or white gauze, or similar material, while he gets used to captivity. Also see that the food and water are easily accessible—right under its nose, as it were. Personally, I commence with a supply of not over large mealworms in the food dish; then give a few biggish ones cut in two; then lightly sprinkle these cut mealworms with a good insectivorous food, prepared with a generous admixture of finely-minced hard-boiled (fresh) egg; then I press the cut mealworms well up amongst the food. These are the stages: at the end the bird has become used to taking up some of the insectivorous food (especially particles of the egg), and I then gradually wean him off the mealworms, giving them occasionally only. I hope this brief description will make the process clear to you. It is troublesome while it lasts (if one counts trouble in such matters), and takes a week to fourteen days, according to the disposition of the bird, before it can be termed "well on food." And they need hundreds of mealworms in that time. A few gentles are good, if obtainable and well scoured, while live ants' eggs are splendid. You can give a little of both in addition to the mealworms. The cover over the cage can be gradually raised, as the bird becomes used to its new surroundings. Live ants' eggs are, of course, the ideal thing for newly taken small Softbills; but it is not everyone who can obtain them readily.

HOUSE'S CANARY MANUAL

By C. A. House. Post free 1/2 (postal order).

A thorough and practical guide to the general management and breeding of Canaries, written by a well-known expert and judge. It contains chapters dealing fully with the breeding, etc., of every member of the Canary family, including the German (or Roller) Canary.

An illustration of each bird, by the master Canary artist, Mr. H. Norman, reproduced in the finest art style.

There are also exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases and seeds—a compendium of knowledge approached by no other book of its kind at the price.

CAGE BIRDS, 154, Fleet Street, London, E.C.

Choosing a Linnet.

Novice.—Sorry to hear you have had such ill-luck. It is a puzzle to me how anyone can be taken in by the artificially coloured breast of a Linnet. The colour is so palpably unnatural (at least, to my eyes); just a smear of "reddle" put on with a finger—very different in appearance to the red on the breast of a genuine cock bird. The price is another pretty safe guide. When cocks and hens are mixed (or the cages, rather) the lowest-priced birds can be put down as certain hens, though the difference may be only a copper or two. It is safe to say, in fact, that the great majority of "cock" Linnets offered for sale at temptingly low prices are not cocks at all, but hens. Buyers will bite at low prices; and they generally get bitten in the process. When you get to know a good Linnet, then you can safely look for "bargains." I have known a Palace winner purchased for fivepence; and I have seen scores of unmitigated hens sold for more. For singing purposes you want to go and look out a medium-sized bird, bold in demeanour (not dashing madly about the cage), with big, wide-open, fearless eyes, and tight in plumage—a bird that has "got the jump quickly," as old Linnet men say; that is, hops steadily backwards and forwards without getting on the wires. Such a bird is certain to turn out a singer (if a cock, of course). If he "does a turn" while you are weighing up his merits, then he is doubly certain to. Don't pick a loose-feathered, "lumpy" looking, "quiet" bird, however, thinking him "very steady"; he is most likely ailing.

Managing Mother.

Novice (Tynemouth).—You are wrong; the hen, when sitting, should not be given a liberal diet such as she will have when feeding the young. Still, I think it wrong to throw hens back on to an unvarying diet of canary seed; that is unnecessary, and, I think, even harmful. When incubating the eggs, put only plain canary seed in the hopper, but give on alternate days in the egg drawer a tiny half-teaspoonful of egg bread sprinkled with maw seed (one day) and a half-teaspoonful of mixed hemp and summer rape (the next day). When the young are due to hatch, I give the hen, to feed with, plenty of canary and summer rape seeds and lightly cracked hemp seed, with a little shelled sunflower and maw seeds. I offer ripe seeding green foods, such as chickweed and shepherd's-purse, freely—but strip off all coarse leaves. If you cannot get this, give young lettuce and watercress leaves—but not freely until the youngsters are three or four days old. She may also relish a little soaked (just sprouting) rape. I don't use scalded rape; only that soaked in cold water, frequently changed. Don't give these things all at the same time, but offer them at various periods through the day—nothing like variety to induce hens to "pack" their babies. Egg bread, made by well mixing an equal quantity of crushed Osborne biscuits (or equal quantity of stale bread crumbs) with a minced hard-boiled (twelve minutes) egg, must, of course, also be freely offered. Any hen worth her salt will rear fine, lusty young on this menu.

Brevities.

A Goldfinch in Trouble (Bristol).—It is due to weakness, the bird being affected even by changes in the weather. Give a course of the strengthening medicine advised "W. T." this week, and feed the bird well.

The Culprits (G.W.B.).—The Great Tits were the culprits. It is dangerous to keep them with weaker birds. I have met with many cases where this species has slaughtered companions in an aviary. The only advice I can give you is to remove them.

A Woodlark (W.T.).—Get one ounce of syrup of hypophosphites B.P. from a good chemist, and stir four drops into a tablespoonful of drinking water; give this fresh twice daily, and continue for 10 or 12 days. Give other live foods, as obtainable, in addition to mealworms. If the bird is troubled with bird-lice (a frequent source of feather trouble) these must be got rid of.

Young Mules Dying (Florrie Cramp).—You should heed the way I advised a querist last week. It is possible your young birds may have eaten too much green-food, or imbibed too freely at the water-pot; sources of danger to birds just commencing to feed themselves. Make the water bitter at first with a drop or two of tincture of gentian; a good and safe tonic, if unpleasant to the taste. Put any afflicted young on to milk-sop at once.

A Trio (J.H.).—1. I know of no seed or seeds capable of giving any bird the "pip on the rump." 2. The properties of seeds is too long a matter to deal with here; a book can be written on the subject—in fact, has been written—and it is published by Cage Birds. You should certainly buy a copy; no fancier should be without it. 3. It is due to constipation. In two tablespoonfuls of drinking water dissolve as much sulphate of soda as will lie on a shilling. Give for one day, repeating only if it seems needed.

Two wagtails (Wagtail).—Wagtails can be very pugnacious towards others of their kith and kin, and probably two would get to fighting (unless a pair) in your small aviary. Apart from this it is possible to keep a Wagtail among a mixed lot of Finches. The latter will not interfere with him; except to sample his food, probably. The latter must be a good quality insectile mixture, prepared in the usual way, and supplemented with suitable live foods according to season (mealworms, small beetles and grubs, fresh ants' eggs, etc.).

Linnet Muling (Peter).—The explanation is that neither of your birds is quite ready for breeding. Your methods of feeding are not those which I recommend, though you must not take this to mean that I have no particularly good opinion of the foods you mention. It is full early yet for Mule breeding—the middle of May usually arrives before the majority of caged Finches become really in high breeding condition. Try the hen with a little nesting material. If she carries it about in her beak, and seems to be looking for somewhere to deposit it, put in a nest pan. But I think you must exercise patience a little longer. A spell of warm weather would "set going" many birds.

FOREIGN BIRDS.

Answered by Wesley T. Page, F.Z.S. M.B.N.H.S., etc.

In Poor Plumage.

R.G.—I should much like to hear exactly how this bird has been fed and treated. In the meantime anoint any bare places with Spratt's "Pennakura," and spray the bird every other day with quassia solution. Keep it where it will get all the fresh air possible without being exposed to draughts or cold air. Keep the bowels moving freely with several doses of Dinneford's Magnesia (one part magnesia, three parts water), with a couple of days between each dose. On the days you are not giving the magnesia well colour the drinking water with Parrish's Chemical Food. Confine its diet to seed mixture, ripe fruit, plain biscuit and nuts in variety; a piece of dry toast or stale household bread, slightly moistened, not saturated, in the chemical food water. Also supply cuttlefish and gritty sand. It is a good practice to crush some cuttlefish to the size of canary seed and mix same with the seed mixture.

Grey Parrot Indisposed.

J.W.—Give it one or two doses of Dinneford's Magnesia, with two days between each dose. Give it as follows: One part magnesia and three parts of water to be given instead of the drinking water on the respective days. If the voidings become at all watery the Dinneford's must be stopped for a time. When not giving the magnesia, well colour the drinking water with Parrish's Chemical Food, and continue same for a month. The bowels should be kept moving freely without being loose; a dose of the magnesia will soon relieve constipation. The diet should be confined to seed mixture, ripe fruit, plain biscuit and nuts in variety. On no account be persuaded to give milk, tea or coffee sops, table scraps or any kind of animal food whatever. Let it have all the fresh air possible without subjecting it to draughts or cold winds.

Black-checked Lovebirds, etc.

H.B.—Black-cheeks require a log nest or large husk. In some aviaries these have bred freely, in other, with equally good accommodation, they do nothing at all. It is not yet known at what age the young breed; judging by other species of Lovebirds—presumably when about twelve months old. They most probably are in full colour now, but it will be far better for you to repeat query on this point, and send me a description of your birds, noting carefully any differences in eye colouration. Canary, white millet, and also spray millet, of the latter they are very fond; oats are wholesome if they will take them, as also is any kind of ripe fruit. Fresh lettuce and grass in flower (seeding grass) are the best green foods. When writing again please give aviary conditions, etc., under which they are kept.

Another Feather-Puller.

Peckover.—There are several replies to other querists in this issue as to the treatment of feather pulling greys which will fully meet your case. Give your bird a course of Dinneford's Magnesia, Parrish's Chemical Food, and treat bare patches with Spratt's "Pennakura," as advised in said replies. You will find the following seed mixture very wholesome: Three parts each canary and white millet seeds, and one part each hemp, oats, dari, and sunflower seeds; well mix, and keep a supply continuously in the cage. Also supply ripe fruit, plain biscuit and nuts in variety. Cuttlefish should be kept in cage, also a regular supply of drinking water. A crust of stale household bread, or crust of dry toast, just moistened in the drinking water, are also permissable. The above will give you an ample range of diet. Do not give any tea, coffee, or milk sops, table scraps, or any kind of animal food whatever.

African Grey Unwell.

W.C.P.—Diet your bird as advised to "Peckover" in this issue. The seed mixture should be the staple diet. Give several doses of Dinneford's Magnesia at intervals, so as to keep the bowels moving freely, but the voiding must not be allowed to become watery loose (dose: one part magnesia to three parts water). When not giving the magnesia well colour the drinking water with Parrish's Chemical Food. With a camel-hair brush paint the legs with neat whisky daily, or oftener. You cannot well give the Parrish's Chemical Food too strong, either on bread or in the drinking water, so long as you are on the look out for constipation, which a dose of the magnesia will soon relieve. It is a pity you did not write at once. Do not give tea, coffee, or milk sops, table scraps, or any kind of animal food. A few sips of very weak brandy and water (just chilled) occasionally may also help. Report progress in a week or two.

BUDGERIGARS AND COCKATEELS.

By C. P. ARTHUR.

Price 6d. post free.

The breeding of Budgerigars and Cockateels is recognised as one of the most profitable and pleasure-giving sides of foreign bird-keeping. In this practical handbook an eminent authority and highly successful breeder gives very full details upon **How to Keep, Feed, Breed, Tame, and Teach to Talk.**

Running at Nostrils

Miss C. M.—Keep the bird's bowels moving freer, with occasional doses of Dinneford's magnesia (one part magnesia to three parts water), with two days between each dose; however, this must be stopped if the voidings become watery-loose. Well cleanse the nostrils with diluted glyco-thymoline (use a camel-hair brush, which must be well cleansed for each occasion). When not giving the magnesia put the following mixture, using the same proportion of water as with the magnesia: Ipecacuanha wine, oxymel of squills, and glycerine in equal parts; this can be given for a week or ten days, when you had better report progress. The eyes really need bathing with a rose-water and zinc eye lotion (from a chemist) so long as the running continues, once or twice daily, though I do not quite see how you are to accomplish this. If there is a vet. near you, you certainly might do worse than leave the bird in his hands for a time. On the other hand, if you carry out above treatment, or get it done, it should give relief. Anoint any bare patches with Spratt's Pennakura.

Breeding Zebra Finches.

Briton.—Yes, they should do well in the position you name; as also should Silverbills, Bronze Mannikins, Bengalese, Spice Birds, Waxbills, and Avadavats—but do not overcrowd. As the floor space is so small, I should advise you not to exceed three pairs, only two pairs would be better; but whatever number you keep there should always be double the number of nesting receptacles that you have pairs of birds. Let them have all the sunlight and fresh air possible, so that they are not subjected to draughts. The average period of incubation is fifteen days, but it is rather difficult to tell when incubation is actually commenced. Some Cuttroats are quarrelsome, but I have kept these species together without difficulty; in the breeding season there is always more or less bickering going on, and this is more pronounced where the number of nesting receptacles is limited. Given ample choice in this direction I have not found them to materially interfere with each other's nesting arrangements.

A Sick Mynah.

W. L.—Your diet is very liberal, and yet your bird appears to be suffering from some wasting disease, so far as I can gather from your remarks. The trouble is probably of long standing, though it only manifested itself three weeks ago. Make your milk sop of equal parts of crumbled stale bread or biscuit, and Mellin's food, add the requisite quantity of milk, boil the whole together. In addition to your present diet, give the bird as much ripe fruit (in variety) as it will eat; also a liberal supply of live insects. I should give it two doses of Dinneford's magnesia (one part magnesia to three parts water) with three days between each dose, providing bird is not scoured or has the appearance of being so; two other doses of the magnesia might be given with advantage, but you must be guided by the symptoms. The chemical food is a good tonic, and might with advantage be continued either in the drinking water, or spotted over the soft food mixture. I hope this will arrive in time to save the bird, but it is in a very critical state, and it is a pity you did not write us a fortnight ago.

Foreign Bird Querists will find in our handbook, "Foreign Birds for Beginners," 1/1, and "Budgerigars and Cockatiels," 6d. post free; a mine of information of use and interest.

Paraquay Magpies.

Qong Song.—I cannot, of course, attempt to name your birds without a description; such names as the above practically convey nothing to aid one in defining the species. (1) Your dietary is about correct, but now the spring is fairly with us I should vary the supply of live food as much as possible; cockroaches, beetles, spiders, smooth caterpillars, and almost any garden pests may be given that you can capture. (2 and 3) From the details you supply I should say there is no reason why they should not breed by every probability. Fix up a faggot of sticks in each corner of the aviary, and a small platform behind each, fairly high up; the lid of a small fruit hamper answers the purpose very well; as nesting material supply short birch twigs and coarse bents, apart from this leave them to take their own course, and if they do build do not be curious or interfere with the nest in any way. Hope you will have luck with them. Shall be interested in hearing result.

Aviary Questions.

E.F.M. (Sutton).—In aviaries B and C you can keep nothing smaller than Virginian Nightingales. Such as Pekin Robin would escape through one-inch mesh netting with ease; it is a mistake to cover aviaries with so large a mesh, as not only does it restrict choice to birds of a given size, but Sparrows gain access without difficulty and add considerably to the food bill. Himalayan Thrushes are hardy, and would do well in aviary C, as also would pairs of Harlequin Quails, Diamond Doves, Green Cardinals, Black-headed Sibias, Shamas, and red-vented Bulbuls. Of course, if you put ½-inch mesh netting over the large mesh (which is what I should do myself, as even if large birds are kept, a head is often pushed through the netting to ultimately fall a prey to some cat). You could keep in addition to the above-named birds, Weavers, and Whydahs in variety. Saffron and other robust or pugnacious Finches, etc. Re aviary B, you can confine Budgerigars and Lovebirds under larger mesh netting than ½-inch. In the aviary as it is, you could keep Roscila, Redrumps, Stanley, Banded and Ring-necked Parrakeets and Cockatiels, but not Budgerigars and Lovebirds, unless you cover the 1-inch mesh netting with ½-inch. All the above will be noisier than Cockatiels, but not unduly so, save when badly scared by cats, etc. I cannot advise you to put Roseate or other Cockatoos with Parrakeets, and you will get far better results with not more than four pairs in the aviary than if you increased the number. It is no use planting living trees or bushes in the Parrakeet aviary. You should have good breeding successes in all the aviaries, providing you do not overcrowd. If I have not covered your need, please put definite queries on any doubtful points, and I shall have pleasure in answering same.

Parrot with Overgrown Beak.

A. W. Anderson.—The beak should not have been allowed to reach this abnormal length; it should have been clipped periodically. Unless you have had some experience in trimming back, I should advise you to let a vet. operate for you, or at least some experienced fancier. A vein runs down the upper mandible, and you must not cut back into this. With a bird having this tendency I should keep a chunk of hard wood (preferably with bark on), also cuttlefish and a lump of old mortar rubbish in its cage; it should then be able to keep its beak down to normal dimensions. A pair of good nail nippers should form a good instrument; but, I repeat, you far better get some experienced person do it for you.

Feather Pulling.

Simms.—The treatment prescribed in our previous reply will apply equally in the present instance. Give Dinneford's Magnesia every third day, so long as the voidings are not watery loose; also recommence the Parrish's Chemical Food. Anoint all bare places with Spratt's "Pennakura," and keep the bird occupied as much as possible by supplying short lengths of tree branches and cotton reels for it to cut up and play with, also by talking to it, fussing about with it, and keeping it in your midst as much as possible. It will also help, if you could let it out of the cage at convenient intervals for exercise, but you must keep it under observation or it will leave its mark on furniture, etc. I trust the rolapse will prove but temporary.

Bird with Swollen Feet.

Miss L. W.—I do not really like to attempt to advise after a vet. has seen the bird, and his treatment has so far given satisfactory results. He [illegible] of the case having seen the bird, than it is possible for me to grasp from a letter. We do not like to see our pets suffer, or even in slight pain, but these troubles, once they occur, take some little time to eradicate, and his remedies are certainly quite in order for the trouble you describe. The cage should be frequently changed and fresh sand put in at least daily, so as to get rid of all germs—the cage tray should be scalded once or twice a week. Both the remedies you name would be quite in order for sore feet, but it will be far better for you to tell the vet. just what you have told me, and leave him to advise a change or continue the regular treatment. While the trouble lasts, it would certainly help if you put one-third of a teaspoonful of Dinneford's Magnesia with its soft food mixture; or, if it will not take the latter, let its drinking water consist of one part magnesia to three parts water. It should certainly do no harm to well soak the foot in comfortably hot water before dressing with the permanganate of potash.

Brevities.

A Sick Grey Parrot (Shipton).—Give the bird several doses of magnesia (see other replies in this issue) every other day, so long as the voidings are not watery-loose, and put it on a course of Parrish's chemical food—for directions see other Grey Parrot replies in this issue. Confine its dietary to seed mixture (the mixture advised to another G.P. querist in this issue would be better than the one you are using), ripe fruit, plain biscuits, and nuts in variety. If there is any growth on the brain, I fear you can do nothing for it, save let matters take their course. You had better report progress in a fortnight's time, when I shall hope to hear of an improvement.

Grey Parrot Out of Condition (J.H.B.).—I do not think there is much the matter. Give several doses of Dinneford's Magnesia (one part magnesia to three parts of water) with a two days' interval between each dose. The bowels should move freely, but the voidings must not be allowed to remain watery-loose. You must judge by the bird's condition when to stop the magnesia; when you do so, put the bird on a course of Parrish's Chemical Food. Choosing warm, sunny days, give it two or three sprayings with quassia solution. Note: The steeped corn only keeps fresh one day. Your diet is satisfactory, but you could give a few nuts occasionally as a change. Keep a piece of cuttlefish in the cage. I advise the following seed mixture in preference to the one you are using; two parts each canary and white millet seeds, and one part each hemp, oats, dari, and sunflower seeds—well mix, and keep a supply continually in the cage. You had better report progress a fortnight hence with full details.

The Sprosser and its Merits (J. P.).—It must be treated much as you would a Nightingale—soft food (some good mixture, consult advert. columns), live insects, and ripe fruit. I have a friend who has kept many Sprossers, and he considers them superior songsters to the Nightingale; with this, so far as my experience goes, my opinion coincides. Very few of these birds sing all the year round, but the Sprosser sings for the greater part of the year. I should purchase as opportunity presented itself, though the period you name is perhaps the better, though not essential. The individual you name is reliable, and as likely as any of the dealers to procure you what you want. The courses open to you are, to either advertise or watch advert. columns. They should have a roomy cage, nothing smaller than you would give to an English Blackbird or Thrush. You should meet with good success under the conditions you name, if you procure an established bird. Note.—No bird can survive draughts for long.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 2, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 21s. Subjects for post mortem examination must be sent packed in a box direct to Mr. Yates, with the fee, this and any accompanying letter being kept from contact with the dead bird. Any bodies sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Spalding.—Replied by post.
Warwick.—Replied by post.
Salop.—Replied by post.
Devon.—Replied by post.
Knaresboro.—Replied by post.

D. A.—Ptomaine poisoning brought about the death of the bird you submitted to me for examination, and I should say there is no doubt it was responsible for the death of the other cock bird. This is brought about by changes taking place in the food given, resulting in the formation of poisons known as toxins, which are harmful to the bird's system and bring about rapid death. See that feeding and drinking utensils are thoroughly clean; thoroughly examine your seed, see that it is perfectly clean and sweet, if not (or if only a small quantity), this will be best destroyed. Give a mild aperient to your remaining birds, such as a little sulphate of soda dissolved in drinking, daily for a few days, to eliminate such toxins, if present, from their systems.

Curios.—So I am quite correct when I suggested previous deaths amongst your birds, and probable future deaths. Why will so many of my correspondents try to keep me in the dark in regard to the history of cases, more particularly in suspected infectious cases? As I told you, death resulted from septic fever. Of course, I realise that to know we have this disease upon our premises is not very pleasant, or even to suspect its presence. Your experiment is one I have seen carried out many times, but unwittingly much to the owner's discomfiture and loss. You can destroy every bird in your establishment with this same infected cage if you choose to use it. The experimental bird, the Greenfinch, was badly affected with septic fever, the spleen and intestines showing well marked nodules, whilst the liver was not affected to such an extent. Do not spoil the ship for halfpennyworth of tar; go in for a thorough regime of disinfection; look upon your place as an infected area. Maybe the cages you purchased were the contaminating articles; nevertheless, as you have had these on your premises for some time, it would be quite possible for the disease to have spread. Septic fever is probably a contagious rather than an infectious disease, so that the fact of you or your attendants handling these cages, the diseased birds, or even attending on them, is quite sufficient to disseminate the disease; in fact, it is remarkable the rapidity with which it can spread throughout our aviaries, particularly indoor aviaries. Destroy these two cages; on no account sell them—they are highly dangerous. As a disinfectant the solution of corrosive sublimate you have been using is the most effectual germicide at command, but there is a little risk in its employment of poisoning the birds. Let me know some time if you determine to keep the cages, whether the coatings of paint and enamel are effective in destroying the germ. You must not conclude that because in your occupation you are brought into infectious areas, and that you suffer no harmful results, that your birds should escape contamination when exposed to contagious elements. Contagious and infectious diseases vary very much in their virulency (degree of harmfulness), some of which we can withstand more readily than others, and some of us are more susceptible subjects than others. Septic fever does not arise spontaneously, nor is it dependent upon atmospherical causes, indiscreet dieting, etc. It is a microbio disease, the microbe of which has not yet been discovered. It may be indiscoverable, like many other microbes of other contagious disease—they are so minute that even the most powerful microscope will not show them. This may be true also of septic fever, for I have submitted specimens to the best known bacteriologists of the day without any convincing results following. Your Greenfinch is at present being prepared for an exhaustive examination in this way. Your accommodation, I should say, is most ideal, and you are quite right in your reference to sunlight—it is a disinfectant of the first degree. Septic fever commences with the introduction of the microbe, and you cannot perceive its commencement, nor even do many birds manifest outward symptoms until approaching death; they may go on for months apparently well, and yet be all the time infecting others. Now, if you could only see inside them you would know what to do. Your next experiment should be with the X rays; examine all your birds periodically, destroy those showing disease. Here is a chance for you. Do not think that you or anyone else can prevent the disease or cure it by means of physic; the necessary means for this has yet to be discovered, and, personally, I think this will never be. There is only one treatment, and that is preventive, and it remains in the hands more particularly of you breeders, viz., to treat outbreaks as infectious areas, destroy or disinfect articles capable of carrying contagion, and *morally* when we knowingly have the disease on our premises to refrain from selling birds and distributing the disease wholesale. I am much obliged to you for furnishing me with the bird and its history; let me know result of anything further that may occur.

H. B. White, Jun.—The yellow hen Budgerigar you forwarded mo died of pneumonia, involving both lungs. Death in these cases are generally rapid, so that I can quite understand its apparently healthy appearance the previous day. Probably the change of surroundings, coupled with the recent few cold days we have experienced, are the cause. Otherwise, the bird was well nourished and in good form. I have not the slightest doubt but that at the time of purchase it was perfectly free from any disease, but that this occurred subsequently, due, as I say, to atmospheric causes.

Cactus.—Thanks for your kind remarks re my articles in CAGE BIRDS. Although your birds are dying from errors in feeding, yet it is in no way due to ptomaines forming in the food, as you had thought, for as long as egg food is freshly prepared and feeding utensils kept clean, there is no likelihood of such occurriug. The mistake you have made is feeding too freely on this diet; it is too heating when given so frequently. At any other time than the breeding season it would not have this bad effect on your hens. The ovaries (a part of the reproductive organs) at this season, and when hens are laying, are in great activity. There is a larger supply of blood to these organs to enable them to carry out their functions. The food being overstimulating tends to inflame these organs, and set up disease, which has been accountable for the loss of your hens, particularly as you are in addition supplying them with artificial heat in your room. Were your birds kept under colder conditions, this diet would not have such a harmful effect. There is not much need for medicine in this case, but I think that a little sulphate of magnesia given in the drinking water daily for three or four days will do good; just sufficient to act as a mild aperient. Feed on a little egg food only twice daily, when I feel sure you will experience no more losses. Just received the seed. Yes, it is certainly musty, but is not accountable for the loss of the hens, or it would affect the cocks as well. Destroy it—it is not fit for feeding purposes.

R. W. S. Tebb.—The cinnamon hen Canary died of congestion of the lungs, both being engorged with blood of a very dark colour. Extending her neck forward as you describe was a movement to facilitate inlet of air into the lungs, The discharge from the mouth is a common occurrence in these cases, and, in fact, all the symptoms you describe point to death by asphyxia following this congested condition of the lungs. Lateral movements of the beak producing the clicking noise similar to that made by clicking the finger nails together, is almost a constant symptom in birds of pain or great distress. Congestion of the lungs may arise from many causes. Exposure to cold, draughts, adverse exposure to too warm surroundings, or enforced inactivity such as would occur whilst sitting, in susceptible subjects where the heart is weak and incapable of freely distributing the blood through the lungs. I am pleased to hear you managed to save the eggs all right, although they had become quite cold. It is a tribute to your careful attention.

E. Liman.—I am inclined to think that the trouble is in the nest, for the chick died of disease—not accidentally as in the other case. Its little body, on being opened, was filled with a dark coloured fluid, deeply tinged with blood. This occurs in septic diseases arising from infection. You had better destroy this nest and give them another one. You are quite right, the little apertures you note just behind the eyes are the aural openings. In adults these openings are placed much further back. They are not provided with appendages as in humans. This pair of birds are not very profitable, I am afraid. Are they quite young birds? If so, don't you think you paired them up rather too early in the season? Your mode of feeding is quite satisfactory, the substitution of the biscuit being a good plan if the bread was not to be relied upon. You cannot blame the parents for your losses; there is no way in which they would transmit disease to their young; at least, my examination does not point to this being the case. I trust you may have better luck in your next attempt.

Bowes Park.—Replied by post.

GENERAL.

Answered by the Editor.

An Advertisement (Hines).—There are twenty words; the charge will, therefore, be eightpence.

An Address (J. Kitson).—We do not know the address of the maker of this food; it is a Continental one, we think.

Medicines for Cage Birds (T. C. C.).—We expect one of the slips was a printer's error. The other point we are submitting to Mr. Yates. Thanks for drawing attention to the matter.

Protrusion of "Egg-Bag" (Old Killie).—The only way to deal with this "accident" is to dress the parts with olive oil (or vaseline) and gently replace them, a blunt bone knitting needle being a useful implement to employ. The hen should have a prolonged rest from breeding if the operation is successful.

Wake up, Fanciers! (John Farrall).—On two of the three points you mention you are under a misapprehension, viz.: (1) the birds in question were *not* caught in the close season, and (2) they were *not* caught in a protected district. This being so, we think you will agree that there can be nothing gained by publishing your letter.

Correspondence.

Will a Black Linnet Breed Mules?

SIR,—Could any of your readers solve me this question? I have a Linnet three years old, and it bred mules for me last year, but it has had a "black moult" this year. It is fresh and in breeding condition. The hen Canary is in condition, and is calling to the Linnet. I want to know if the black moult will stop him from breeding, and what is the cause of a bird moulting out black?

G. H. LUCAS.

Lost, Stolen, or Strayed.

SIR,—Is the Caterham Fanciers' Association missing? It was last seen alive at the annual show in October last. Since then it has apparently been dormant, or is defunct. No general meeting, no balance sheet for above-mentioned show, no date fixed for the next, no pair show, no nothing. Anyone giving information as to its whereabouts and condition, or an opportunity to friends to attend at the funeral (surely it more than merits a decent burial?), will be rewarded with the gratitude of

EAGER REVIVALIST.

The Proposed Open Show for Glasgow.

SIR,—A meeting of delegates representing the Glasgow and West of Scotland, Glasgow and Western Counties, Glasgow West End, West of Scotland, City of Glasgow B.C., Partick, and Queens Park and Dis. C.B.F., was held on April 19th, in the Good Templars' Hall, Ingram Street, Glasgow, to consider the best means of forming an amalgamated Association of Glasgow clubs to run an open show. Mr. R. B. Gibb (Glasgow West End) was elected to the chair. After a general discussion, it was eventually decided by 13 votes against 2, on the motion by Mr. A. Muir, that such an association be formed, annual subscription to be 2s. 6d. each person, which shall entitle all members to the privileges of the association. A discussion then took place re most suitable date for holding show, Mr. D. Graham moving that we fix Tuesday and Wednesday, January 3rd and 4th, 1911. An amendment to this was moved by Mr. Hunter that we fix the same date as the late Glasgow and West Show. The Chairman putting this to the meeting, the motion was carried by 10 votes against 4. A difference of opinion arising over the most suitable hall for show, it was moved by Mr. Graham that we engage the Drill Hall, Stirling Road. This brought forth an amendment by Mr. F. Taylor that we elect a small committee to look for a more suitable hall, the motion being carried by 6 votes against 5. An election of office bearers pro tem. then took place, and the following gentlemen were unanimously elected: President, Mr. R. B. Jarvie (Glasgow and West of Scotland); vice-presidents, Messrs. A. Malcolmson (Glasgow and Western Counties); R. Jeffrey (Queens Park and Dis.); C. Hunter (West of Scotland); and R. B. Gibb (Glasgow West End). Secretary, Mr. F. Bowman, 5, Parkview, Tollcross. The secretary was instructed to write all Glasgow societies for their support by subscribing towards a trophy to be competed for annually at open show amongst those clubs willing to subscribe to such a trophy. By this means a spirit of friendly competition could be entered into, which would certainly be a great benefit to the fanciers of Glasgow. A rider was added to the effect that any club other than the original subscribers desiring to compete for trophy at future shows, shall be eligible to do so by paying into the association funds the amount originally fixed by the clubs competing for same. The club whose members gain the highest number of points at open show are to be declared the winner. The trophy is to be held by that club for twelve month only. As this concluded the business, a hearty vote of thanks to the chairman for the able manner in which he had conducted the proceedings, terminated the meeting. After the delegates have placed the above before their respective societies, a general meeting of the Fancy will be held (on May 17th, at 8 p.m., place of meeting to be advertised in Fancy Press), and it is hoped a large number of fanciers will endeavour to be present. Business: General review and acceptance or otherwise of delegates' proposals; final election of office bearers; rules; classification, etc.

FRED BOWMAN, Sec. pro tem.

Goldfinches at Menai Bridge Show.

SIR,—Is it fair that the exhibitors should suffer owing to a judge's great blunder? I say no. Why, if a judge is engaged to officiate at a show where there is a small number of good quality birds, you depend on him to do right and fair, and to think about what he is doing, knowing he is to get paid for his work. I think it would be only right for a judge making a blunder to pay the cost of his blunder to the show officials out of his fees. I was an exhibitor at the late Menai Bridge (Easter Monday) Show in the Goldfinch classes; there were two classes for British Goldfinches—one for Blackleg Goldies and the other for house-moulted Goldies. In the house-moulted class was a Blackleg bird, but the judge did not take much notice of that fact, and instead of giving this bird a card marked "wrong class," Mr. Judge gave it a second prize card. And it was the worst bird in the class, if not in the show, a bird which would not be valued at more than a couple of shillings. Is it fair for other exhibitors like myself to be losers of their prize-money owing to the judge's mistake? I think judges like this one should stay at home to judge their own birds in their own bird-room. If Mr. Judge would like to give a reply, let him give same through your paper, CAGE BIRDS.

BOB E. GRIFFITH.

The Yorkshire County British Bird and Mule Club.

SIR,—Would you allow me a few lines concerning British Birds and Mules at Bradford? About three years ago, if I remember right, a meeting was convened at the Market Tavern, Bradford, for the furtherance of British Birds and Mules at our Yorkshire Union shows. I was called to that meeting, and I remember a good many thought we should benefit by them, if we formed a club, to be named the Bradford and County British Bird and Mule Club; its name was afterwards altered to the Yorkshire County British Bird and Mule Club, so that we thought we should get a fair amount of support at the Union shows from the societies that were strong in British in Yorkshire. Now I am sorry to have seen the state of things that has existed at Bradford this last seasan as regards the club at home. I am sure they are a great attraction to any show. I think the novices have not had a fair chance. I think that if they would give them a fair trial, with a fair classification, we should get some good shows. I may say I have done my best, and I expected others to do the same. I have only missed showing at one club show since its formation. There have been one or two who have shown but nothing like what ought to have been, while there has been practically about two of us this last season. The nearest patronage we had to Bradford this last season was Halifax, which I think was a good show, and was worth going a long way to see. The general meeting will be held on April 30th, and I hope we shall have a good gathering from far and near. I hope this will meet the eyes of all concerned, and I also hope they will be as much in earnest as they were at the beginning, and if there is anything that anyone can do for the benefit of the club I shall be pleased to hear it. I think, seeing that we know British and Mules are strong outside Bradford, we ought to try and make them strong in Bradford. I don't think we ought to go to the Zoo, either. We ought to interest ourselves a little more at home, especially seeing the valuable prizes the amateurs have got from your interesting journal CAGE BIRDS. I am sure it ought to be a great encouragement to them.

T. H. INMAN.

Four Eggs in Three Days.

SIR,—I have a clear Norwich buff hen that has twice laid 2 eggs in one day. The first time she was egg-bound, and the next day she laid 2 eggs. Now again this week she has been egg-bound 2 days and laid 2 eggs in one day, the 21st, and another on the 22nd. Now, if she had laid one egg the first day and two the second day I would have thought it out of the common, and I think the hens of "Two's Company" and E. J. Coombs have been the same way held as my own, only they may not have shown it so much. I wish your paper CAGE BIRDS every success and every fancier a good season. C. ELLISON.

A Roller Club for the Hartlepools.

SIR,—At the last ordinary meeting of the Hartlepools C.B.S. considerable progress was made towards adding a Roller section to the already existing society. It is to be regretted that several who desired could not be present through entirely unavoidable circumstances, but these sent their good wishes for the furtherance of the project. The Secretary pointed out the advantages to be derived through amalgamation, and the Roller representatives present acquiesced, acknowledging that with the present headquarters every facility could be obtained for club contests, etc., and the expense shared amongst all fanciers. If "Roller Novice," who initiated the movement, can see his way to come to the next meeting on May 4th and bring others interested with him, I am sure they will all meet with a hearty welcome both from old and new members.

E. WOODHEAD, Hon. Sec.

A Singing Hen Canary: Will She Breed?

SIR,—In reply to your correspondent "Singing Hen," I may state that I have a clear yellow Border hen which sings as loud as any cock birds I have. I have also had other fanciers to hear it (caged by itself) singing, but they all left with the same idea—I was wrong about the sex. But not so; I paired it up and I had eleven young birds from her last season, and I have already four from her this season. I may say, too, that she is one of the best feeders I have. I hope this reply will put all doubts on one side as to a singing hen being of no use for breeding. I hope your querist will have the same good luck with his as I have had with mine.

J. W. BERGEMAN.

SIR,—I notice your correspondent "Singing Hen" is anxious to know if singing hens will breed. My experience is that such hens are just as likely to breed as those which do not sing; in fact, one of the very best breeders I ever possessed sang as lustily as the cocks, and brought up three good nests in one season. My advice, then, to "Singing Hen" is, by all means try the songster, and I do not think you will be disappointed.

J. C. WILMOT.

SIR,—A perplexed breeder, signing himself "Singing Hen," enquires what to do, or whether to dispense with his singing hen. If she is a fairly decent hen it would not take me a second to decide on her breeding and laying qualities. What I should do in the first instance would be to mind and have 5 or 6 more hens commencing at the same time. I would put the cock to this "singing hen," having both in the best of condition, and as she laid up to 4 or 5 eggs put them under my other hens, say one each distributed with carefulness. I would leave my singing hen with 5 dummy eggs to perform with, exactly as she cared to proceed. I should leave her to herself till it was time to be getting her on again. See that she has a nest pad. Whether this is a suitable plan or not, it is the way I dealt with a rather curious hen last season, almost every egg being a success with its stepmother. Perhaps some other breeder will give "Singing Hen" better instructions to follow. I wish him the best of success.

JOHN H. JOWETT.

SIR,—In reply to "Singing Hen," I can assure him that singing hens will most certainly breed, and prove good mothers. All bunkum it is—not breeding. He must be a novice in the Fancy, else he should know that it ought to have been paired up. Does it not stand to reason, if it were otherwise, that if a cock does not sing, it will not breed? It is the same with a hen, although all hens are not alike. I may say that I have a hen at present that is 12 years old (a singing hen), and she has bred every year up to last year. At present she has asthma, etc., but I do not like to end her life. She has proved a champion breeder and mother. When I bought her (when she was two years old) she was singing lustily, like a cock, and the fancier sold her for a very small price—a sadder mistake he never made; the said hen proved a grand one. There has not been a nest but it contained a winner. I sold one bird for £4 10s. to a big exhibitor, and this was claimed at the Crystal Palace for a goodly sum. I have myself won a tidy few prizes with the youngsters—not 4ths, but 1sts and specials. I have at present a fine Yellow cock bird off her, which I would not sell at any price. Don't, "Singing Hen," discard yours; just look to the cocks and see if they are in full loud song, and mad to nest; then pair her up to one and give plenty of watercress with egg food. See that the nest is lined with felt. Stop egg food on the third day, and don't give any till the eggs are due to hatch. In fact, it does not matter if you miss a day, as not many hens feed their young with egg food as soon as they are hatched. I myself have had as many as ten in a nest, and I should know something after 20 years of breeding. If "Singing Hen" will follow the above instructions, does not touch the eggs as laid, and leaves the cock with the hen, he will be amply repaid for the trouble. I for one would not part with the singing hen if of good type, etc. "Singing Hen" should not listen to hearsay, but have another try, and if the cock is right your correspondent can expect fertile eggs. But pack the watercress into them. I shall be highly pleased if "Singing Hen" will let readers know if the experiment answers. GEO. WILSON.

Suggested Society and Show, for Pentre and District

SIR,—It has been suggested by several well-known cage birds fanciers in the district that a society be formed to promote the Fancy. All persons desirous of becoming members, will they kindly attend a meeting to be held at the Queens Hotel, Pentre, on Saturday, May 7th, 1910, at eight o'clock p.m.? Trusting that all interested fanciers will make a special effort to attend, and wishing CAGE BIRDS every success.

INTERESTED FANCIER.

Specials at Glencraig Show.

SIR,—As a letter appeared in CAGE BIRDS some time ago asking those who had won specials at the late Glencraig Show to communicate with the secretary, I wrote stating I had won one which I had not yet received. I got a letter back stating that the special (along with some others) had been paid over to a late official, who had kept them for his own use, but that a committee meeting was to be held the following Saturday to see what steps were to be taken to recover the specials. As I have not received any further word, I would like to know what steps the committee purpose taking; also if there are any more exhibitors who have been treated the same way?

AN EXHIBITOR.

YOU WANT A GAY GARDEN?

Of course you do. You can have it by planting Strong Plants of Best Quality. These are what Harry Barker sells.

A New Cage Bird Society for Oxford and District.

SIR,—In last week's issue of your valuable paper I read with great interest the letter respecting the new cage bird society for Oxford and district, Oxfordshire being the home of my youth. I have no doubt the mentioned society will meet with great success, which I heartily hope it will. I believe the interest is there, and only needs this society to awaken the Fancy. Am delighted to see these new societies springing up; I consider it should increase the circulation of this most valuable journal, CAGE BIRDS, and help the Fancy generally.

W. H. WATSON.

How to Determine the Sex of Linnets.

SIR,—I noticed in CAGE BIRDS, issue April 2nd, a fancier explaining how to tell cock Linnets from hens. Well, I found that he only mentioned the red-breasted Linnet. No doubt any fancier knows that a Linnet with a red breast is a certain cock; but what about the grey-breasted Linnet, as there are as many caught as the red-breasted ones? Will any kind fancier give the correct way of sexing grey-breasted and Green Linnets, as there is a lot of difference between the sexes. I have been told that the grey-breasted ones are the younger birds. I have several now that are all in full song, field-moulted. No doubt other fanciers would like to know the above points in regard to sexing Linnets. I wish CAGE BIRDS, our best weekly paper, the best of success. "FANCIER."

The Affairs of the Norwich Plainhead C.C. of Ireland.

SIR,—A special meeting was held at Clarence Place Hall, May Street, Belfast, on April 21st. There was a good muster of members. Mr. J. Cummings occupied the chair. It will be interesting to Irish fanciers to know that the Plainhead Club is likely to go on and prosper. Some time ago a committee meeting was held, and at that meeting it was thought best to dissolve the club and hand over the two silver cups to the Ulster O.A., to be competed for annually by Plainhead birds. However, the outcome of this meeting was entirely against this action, and after the situation was discussed at considerable length, it was unanimously decided to carry on the club, and several members expressed their opinion that a bright future was before it. It was decided not to hold a show under the auspices of the club for some time. And the cups are to be competed for at shows where the club's patronage is given by unflighted birds bred by the competing exhibitors. A general meeting will be held in Clarence Place Hall, May Street, Belfast, on May 5th, at 8 o'clock, for the purpose of electing officers, revising rules, and whatever other business may come before the meeting. A very hearty invitation is extended to all those who were members in 1909 to attend.

JAMES STEWART, Hon. Sec.
57, Donegall Avenue, Belfast.

Scandal at Skelmanthorpe.

SIR,—Seeing Mr. Kaye does not apologise for his cowardly insinuation made in regard to my injury, I shall henceforth ignore him as a man of no principle, as I have been advised to let this matter rest. I thank you for publishing my letters, and wish your paper every success. LUTHER DYSON.

SIR,—Many fanciers have followed the correspondence, "Scandal at Skelmanthorpe," but the letter last week signed by John H. Jowett has fairly staggered them. This gentleman is afraid the readers will think him a "novice"; he may not be a novice so far as being a lover of the Canary is concerned, but as concerns show management and the general purposes for which novice classes were formed he must be entirely oblivions. Surely he cannot mean that the Yorkshire Union should be so green as to make novice classes, provide guinea gold medals, and thus help the novice members, and then let some of them borrow birds right and left to win these medals? What about the honest novices, who struggle to breed a good bird or two; are they to be pushed out by those whose sense of right and wrong is so void that they will stoop to such a thing? No! The novice classes must be kept pure, as far as ever possible. Perhaps Mr. John H. J. has some other matter rankling in his mind, something that won't let his better judgment prevail. Have the Y.U. put the "screw" in sometime or other, and does it hurt yet? STRAIGHT 'UN.

SIR,—We think Mr. Kaye might have cause to be exceedingly grateful to the Editor for his kindness in preventing further correspondence on this lofty theme, and requesting (if any) a brief and final reply. Mr. Kaye appears to us to have become a law in himself, having set up his own standard of right and wrong, and thereby judging all things. This is why matters seem to him so enveloped in mystery. Although he has admitted having lent and borrowed birds for exhibition, he still maintains in his argument that he has always been consistent. He tries to make out that I am working contrary to the rules and regulations. No; it is just the reverse. Mr. Kaye also says he has not had every opportunity of proving guilty the gentlemen he accused. Had Mr. Kaye still continued on these lines, he would ultimately have proved himself to us either void of understanding or extraordinarily simple. We look upon the character of these charges as being too serious for "poking fun." As a pugilist, Mr. Kaye is credited with being a true type of the "British Bulldog," and we cannot believe he would accept insult from anyone after the manner he mentions, for he has already given the little red-haired man a sound, good shaking for daring to defend his case. He has also tried to intimidate one of our members to become his witness, and endeavoured to bribe another by promises he was then told he could not possibly fulfil. After having created all this commotion, we wonder to what Mr. Kaye attributes the flourishing condition of our society? In membership, after making necessary deductions, we have an increase on any previous year since its formation, and now that sarcasm has gone out of our midst, as an inevitable result, peace and unity prevail. In conclusion, had Mr. Kaye's plea from the beginning been for mercy instead of the condemnation of those whom we believe to be innocent so far as his charges are concerned, and not have involved the complete annihilation of all that our cage bird association mean to us, he would have had our sincerest sympathy and support. S. MORLEY,
Sec. Skelmanthorpe C.B.A.

[This correspondence is now closed.—Editor.]

A Word to Sellers and Buyers of Canaries.

SIR,—I was pleased to see the letter from Mr. D. Dent on the unfair way in which sellers of Canaries serve novices in sending them different birds than those they apply for. I am sorry for the novice whom he refers to, being a novice myself and having been caught in the same trap. I sent to a dealer for a hen Greenfinch and sent the cash for the bird. I sent a travelling cage and offered to pay carriage. But I neither had the bird nor the money returned, so I think I was worse than the novice referred to. I hope all dealers will read his letter and serve the novice as they would a gentleman, as I dare say there are novices like myself who have to work for their money to send for the birds.

W. H. MORRIS.

SIR,—I would like to give my opinion on this subject as an old breeder and fancier of fifty years' standing. Some of us know there are a good many who advertise in CAGE BIRDS who in every case want cash sent, and will not accept the deposit system, after you have written two or three letters to them, thus spending both time and money. If you send them cash you never get it back (as stated in their advertisements); you have to take whatever they have a mind to send you. All letters afterwards sent to them are treated with contempt. What I would like to suggest is that every buyer insists upon the deposit system (this is a great safeguard to the novice), and does not deal with anyone who refuses a deposit, unless he has had dealings with him before. I think this would soon stop the swindler's game, and anyone refusing to comply, their letters should be sent to the Editor for his consideration as to whether he will insert their advertisements in future. We have an ideal paper in CAGE BIRDS. Let us all combine and help the novice in every way we can. I have three novices who are just starting; I have set them up on a small scale, and they are always longing for CAGE BIRDS. J. M. (Sunderland).

A New Cage Bird Society for Mid-Rhondda.

SIR,—At a meeting held on April 20th, it was decided to form a cage bird society, to be known as the Mid-Rhondda and District Cage Bird Society. Officers elected were: President, the Rev. James, vicar of Llwynpia; vice-president, Dr. Weichart; treasurer, Mr. Kingsly, Tonypandy; secretary, G. Yeo, 1, Upton Terrace, Penygraig; chairman of committee, Mr. Legg, Porth; committee, Dr. Gordon, Messrs. Jelley, Hughes, George, Williams, and Hoore. The annual subscription, 3s. 6d. or 1s. per quarter. Twenty-one names were given in for membership—not a bad start. Our next meeting will be held at the Gwalia Restaurant at 7 p.m., on May 7th. Now, let me ask all fanciers that are interested in the Fancy to attend this meeting. There is a grand opening here for a good society, and if every fancier will rally round and attend the next meeting, we shall have a good time.

G. YEO, Sec.

The Future of the Cage Bird Union.

What is it to be? Some Opinions from Our Readers.

SIR,—According to a circular letter sent out by Mr. Raynes, the Executive Council of the Cage Bird Union, at their last meeting, passed a resolution calling upon district secretaries to call a meeting of their delegates and "forward recommendations to the Executive Council, these to be accompanied by suggestions for the Secretary of the Union, *including a resolution of confidence.*" I see by the reports in your last issue that districts Nos. 3 and 4 have had their meetings and duly obeyed their instructions by passing a vote of confidence in the Executive Council of the C.B.U. What value can be placed upon such resolutions?

AMUSED.

SIR,—Mr. Ramsden last week says that my statements in reference to himself and the London and Provincial O. S. are incorrect in every detail. The only reference is "The L.P.O.S. beyond merely announcing the fact in the Press, have given no clue of their grievance. Their delegate is a member of the Executive, but no suggestions have been made by him to that body to remedy the trouble which caused the society's action." With all deference, would Mr. Ramsden kindly say, for the benefit of the Union members, when and where any such clue appeared in the papers, and can he say that he has made any suggestions to the Executive Council, as my information was to the contrary?

A DELEGATE.

SIR,—As a member of the Newcastle C.B.S., I would like to reply to the letter by Mr. T. C. Crawhall. I would like to inform him that there are a few members who *do* agree with the decision of the C.B.U., and if the N.C.B.S. had been suspended, or any other punishment meted out, where would the justice have come in in regard to this minority? We have as much right to the consideration and "justice" of the N.C.B.S. as has the owner of the special, about which so much cant has been uttered and written. But we are never thought of. Mr. C. also says he has given deep thought to the reconstruction of the Union. Mr. C., take the advice of a friend, and learn first how to obey the present rules like a man before you try your hand at reconstruction. After you have learned that lesson, then your advice will have some weight, and be of very much more moral value than it is at present. You also say it is the unjust decisions of the C.B.U. which have alienated the Northern fanciers. I humbly beg to differ. Very much more in that direction has been done by the example set by yourself and the other officials of the N.C.B.S. The N.C.B.S. officials wanted to "boss the show." Rule 22 didn't suit them, and failing to get it as they wanted it, they jumped the traces. They violated the rules of the C.B.U. so as to smash it in the North, and, I am sorry to say, with success. When one hears of the chairman of a society like the N.C.B.S. (which claims to be the cock of the North) showing at unlicensed shows, also the late secretary boasting in the bird market that he had seen members' birds at unlicensed shows (the man who knows and hides a crime is worse than the criminal, Willie); also that members of the committee had exhibited in their wives' names—they hadn't enough courage to do as Mr. C. or the chairman. What is one to think? Men who are supposed to be our leaders have on the one hand taken on themselves obligations, and on the other made themselves hypocrites by their actions. They blame the C.B.U. for not having done its duty. Why, they are the very ones who have given the grounds for complaint! Mr. C., you also say that your representative evaded the question, and led the members to believe that the decision of the Council was not universal. This is a deliberate lie. Mr. MacPartling said in plain English that the decision was unanimous, with the exception of himself. Perhaps you were not present to hear him say so. In any case, an apology is due from you to him. Now for the Union: I agree that we who pay the piper should, if we cannot call the tune, at least hear the one that is being played, and I hope Mr. Lythgoe will (now he is secretary) at least let us hear something that is being played. I see the district secretaries have taken the hint, and hope they will continue to improve the shining hour. I agree with the suggestion that the annual meeting should travel the big shows. It has been proved in other things that, to keep a National thing at the Palace, it fails, and that, put it on the move, it is a success. Another thing (and one which touches the root of the crisis here in the North) is that societies, when appointing delegates, should only appoint those who have the C.B.U. at heart. I have often heard it said that most of the delegates in No. 1 district were against the Union, and with this the case, what is one to expect? One more suggestion: If Rule 22 stands, there ought to be delegates appointed to attend unlicensed shows.

FORTITER DEFENDIT TRIUMPHANS.

SIR,—So many points come up on the question of the life or death of the Cage Bird Union that I can only hope in this letter to touch on a few. First, has the C.B.U. got so low that it cannot be resuscitated? I should like to say emphatically, no! for I am strongly in favour of what I shall call for short, a "C.B.U."; but I can only say I "venture to hope" that the existing C.B.U. can be raised from its present condition into one of adequate strength and vigour. Secondly, the personnel, and the mode of election. I am satisfied that the delegates and councillors are elected on the fairest and most democratic principle possible, and that, taking them all round, they are as good men as can be got in the Fancy. Indeed, in more that one case, I believe the councillor is the very best man to be found in the district. All districts may not have been equally fortunate, and if councillors are elected who do not, for instance, know the difference between a Mule and a Canary, I think there must surely be some fault in such districts. At the same time I do not think the C.B.U. is fortunate, to say the least, in its secretary as an energetic man of business. Thirdly, possibly all the societies that have seceded have not done so for the same reasons, but I believe one main reason has been that they had no feeling that the rules of the C.B.U. were being upheld, and, on the contrary, they knew that registered members of the C.B.U. were exhibiting at forbidden shows with impunity, and that therefore the said societies were not getting value for their subscriptions. Again, the C.B.U. reports a certain C.B. Society making default in prize money and sale money. Was this society in default in 1908 and was this society reported to the secretary of the C.B.U. as not being able to meet their obligations if they ran a show? Also, did this society pay their sub. for 1909? If not, why were they allowed to run their show under C.B.U. rules, and why has not the C.B.U. sued them for payment of prizes won by affiliated members, as per Rule 16? Fourthly, and most important of all, what is required to put the C.B.U. on its feet? Before attempting to answer this I shall set out some of the difficulties the C.B.U. have to contend with, and afterwards attempt to show where improvements might be made. (A) Is the C.B.U. too big? Is it too much spread over the country, and therefore unmanageable? (B) Are the unavoidable expenses too great? (C) Is the present Rule 22, or more particularly, is that clause of it which says—"Registered members of the Union shall be liable to suspension if found exhibiting at a suspended or non-affiliated or non-licensed club's show, other than first feather shows, and shows or classes confined to members or limited to a county though given at an open show," to be upheld as it stands? (D) Is the rule to be so altered that *no* exhibitor who is not a registered member of the C.B.U. can show at a show held under its rules? (E) Should the above clause of Rule 22, with or without the above suggested alteration, be expunged? With regard to the question headed "A," the alternative to the maintenance of the C.B.U. on its present basis seems to be the formation of a number of similar unions in different parts of the country for the same purposes, and the Y.U. is pointed to as a successful institution of this description. Notwithstanding the success of the Y.U., I am not in favour of such smaller unions. Where the C.B.U. has failed is in its want of authority, and I cannot see how such smaller unions can have even as much authority as the C.B.U. I therefore plump for maintaining the C.B.U. in its present form. I have, however, an open mind as regards any improvements suggested by experience. "B." I now approach finance, and on this point my views will probably be considered fairly drastic. I contend that the C.B.U. will never attain its full object until it has a reserve fund of £50 or £100 or more, with which it could be in a position to fight any law suits that might be brought against it. I do not say such a reserve fund can be got together at once; time is required, and when I point out that at the last balance the C.B.U., after about four years' existence, had only about £35 in hand, out of which the secretary's salary of about £15 and other expenses had to be paid, I think it will be agreed that it can hardly be said to have commenced to form a reserve fund yet. What, then, should be done to arrive at such a reserve fund? For one thing, I see no help but to increase the contributions from societies to 3d., or even 4d., per member, with a maximum of say a guinea and a half. This I feel satisfied will not hurt even the small societies. A society with 30 members only pays 5s. now, 60 members 10s., and even if such societies were called upon to pay double, a union on the proper lines would do so much good that they would get value for their money. An alternative plan might be to make, in addition to the present subscriptions, a special levy of 1d. or 2d. per member for the purpose of a reserve fund, to be continued until an adequate amount was got together. But it will be said, how is the C.B.U. to get along in the meantime until a reserve fund is got together? I suggest that an energetic, businesslike secretary would have no difficulty in finding responsible men in the Fancy, taking the whole country over, who by guaranteeing amounts say from £1 to £5 each to the C.B.U. for the costs of any lawsuits that might be brought against it, would together guarantee the C.B.U. to the extent of £100 or more, any loss to be proportionately divided amongst the guarantors, and the guarantees to hold good for say 3, 4, or 5 years. Again, I have had it put to me (not by himself) that the secretary has avoided trouble because he feared that if any came he would not have enough for himself (while at the same time he would have extra labour), and this ought never to be a consideration with a secretary of the C.B.U. You, sir, suggested that £15 was too little to pay the secretary of the C.B.U.; I think so, too, and I also suggest that there should be an assistant secretary, if possible, within touch of the secretary. I do not at present propose to discuss the question of rearrangement of the districts, although that I imagine should be looked into; but I have heard that every council meeting costs £10 or £12, and, as an economical move, I would suggest that the council be cut down from thirteen to six or seven, and if the number of districts were even, one councillor might represent two districts at the meetings, say for one year, and the councillors of the other two districts might act alternately, in case of need, and in that way if one could not be present at a meeting the other might take his place. You would therefore nearly always get six or seven at a council meeting. However, an arrangement for a quorum, of say five, might be advisable. Then the following year the position of the two districts should be reversed. For instance, the councillor for No. 1 district should attend meetings for one year with the councillor for No. 2 district as an alternative (in case of need), and the following year the position be reversed, the councillor for No. 2 district to attend, with the councillor of No. 1 district as alternate. The other districts should work in the same way. I think the affairs of the Fancy are perfectly safe in the hands of six or seven of the best men in the country. Economy with efficiency can also be worked out as regards district meetings, and as regards inspectors attending shows. "C." Regarding the above-quoted clause in Rule 22 (or in the old Rule 17), about which so much has been written, I think the same should stand as it is, but it can only be effective in the hands of a strong C.B.U. A weak C.B.U., which cannot control practically all the societies makes the rule a farce. As it stands, the rule at first looks unfair, and those who talk glibly and foolishly of "coercion" and "freedom" may fancy they have a case, but I can prove they have not. One of the main difficulties connected with this rule is the elaborate organisation of the Yorkshire Union, and I say frankly that this elaborate organisation should be treated by the C.B.U. as a contemporary, and the mutual arrangement as regards disqualifications at present existing should enable the C.B.U. to enact that a registered member showing at a Y.U. show is not transgressing Rule 22. The London Federation is only catering for members' shows. If, therefore, a strong C.B.U. gets into the position of controlling all the open shows of any consequence throughout England, and continues the present working arrangement with the Y.U., what object has any society or exhibitor in keeping outside? There will always be a few of the cantankerous inclination, but a strong C.B.U. can afford to disregard them. As to the Specialist Societies, I have always thought the C.B.U. made a hugo mistake. Specialist Societies as a rule hold a show in conjunction with a local show, or give prizes and medals at various shows, and nearly all their members belong to some local society, and it has been argued that they need not

A SENSATION OF THE SCOTTISH NATIONAL SHOW

This bird was entered amongst the British birds as an Ortolan Bunting, and awarded a prize by the judge; afterwards it was said to be a Rustic Bunting, but was eventually correctly identified as the Ruddy Bunting, a foreign bird so metimes imported into this country.

The Stock Book.
Our Invaluable "Breeding Room Register." By G. E. Weston.
Post free, 7d.
A well-known fancier has said of it:—"It makes bird breeding easy." This book no breeder of birds can possibly afford to be without. It simplifies the operations in the bird-room, and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred—keep account of their strong and weak points. It contains both Pedigree, Breeding, Young Bird, and Show Registers of simple and unique character, in addition to useful account pages, and many invaluable "Hints for Emergencies."

CAGE BIRDS, 154, Fleet Street, London, E.C

belong to the C.B.U., as their members are already in it individually. But I consider the C.B.U. is entitled to argue that a member of a specialist society showing at one of their shows where special prizes, etc., are offered is showing in a double capacity. He is a man who is paying two subscriptions to two different societies, and he is competing for two sets of prizes at the one show, and it is unfair that he should be allowed to do so unless both societies, the local and the specialist, are in the C.B.U.; and the C.B.U. ought to insist on the specialist societies taking up membership, or debar them from offering prizes at C.B.U. shows. "D." Now as to whether Rule 22 should be altered so that *no* non-registered member can show at a C.B.U. show. I think before answering that, the C.B.U. must divide non-registered exhibitors into at least two groups, say—

Group 1—Exhibitors who own a single bird, and who perhaps only show it once in a year, exhibitors who belong to no society, and all that class. It would be madness to exclude such from a C.B.U. show. Why, many of the large shows could hardly exist without this class of exhibitor, who wants to be encouraged in every way instead of being discouraged, by insisting on his or her becoming a member of an affiliated society, or an associate member. And

Group 2—Non-registered, pot-hunting members and all that kidney who think they can pick up money where competition is weakest; also societies who think they can economise by not joining; these I should certainly prevent from showing at Union shows.

"E." I think that the above will show that I should answer "No" to this question. Publicity. This has been sadly neglected, and I am very pleased to see that district secretaries have now commenced to report proceedings, and it is absolutely necessary that reports of proceedings of the council be fully reported as well. Although I have taken interest in the C.B.U. from its formation, I was surprised to learn from a remark of one of your correspondents that the famous Rule 17 had been converted in some way into Rule 22. I may be able to take up other points later, such as rearrangement of districts, clashing at shows, organisation of the work, so that more could be done by the secretaries of districts so as to ease the general secretary. As has been truly said, a lot of spade work has been done, and the C.B.U. should benefit by this and by the experience gained, and go forward. In the above remarks I do not have any desire to lay down the law, my only idea is to make what I consider practical suggestions for the benefit of the C.B.U. which can be worked out by the executive, and I may add that points like the above are much better discussed in committee meeting than in the Press. But the need has now arisen for a thorough public overhauling of the C.B.U. Finally, I must convey a warning to the C.B.U. officials that unless all hands are put to the pump, and the C.B.U. brought out on top, it must collapse and disappear; there is no middle course. Also, there must be a man—an organiser. Can he be found? Or could the work be done better through a lawyer's office? I notice Mr. Bladon and Mr. Lythgoe are elected as president and secretary. Are they going to act?

"One Who Knows."

Sir,—Notwithstanding the adverse criticism of the C.B.U. which has appeared through your columns recently, I am of opinion that there are signs of a decided improvement in the near future. "We want friendly helpers, not hostile critics—builders, not demolishers," is the appeal of one writer, and I earnestly reiterate that appeal. Whether friendly to the Union or not, writers on the subject almost invariably agree that a well-managed union is an institution by which the cage bird Fancy can best be promoted and advanced for the benefit of all interested. The officials of the existing Union may or may not have done all that could have been expected from them; delegates and district committees may have been more or less lax in their duties; yet we cannot condemn the institution because its rules have not been strictly carried out by those responsible. Let affiliated societies appoint representatives who they are assured will attend to their duties. The machinery of the Union is capable of dealing with grievances which societies or individuals may suffer; and should it be found that any rule is operating unduly with the majority, it is always in the hands of societies through their representatives to have such rule amended or deleted. But members must be loyal; we must submit to the ruling of the majority with as much grace as possible, until such time as we can convince by reasonable argument that the majority are in the wrong. We are told by at least one writer that the C.B.U. as at present constituted is doomed. With all due respect to those holding such opinion, I differ. That the administration may be at fault is a poor reason for condemning the structure. Every individual member of societies affiliated has a voice in the representation. Then I would ask, in what particular is the constitution at fault? Much as it is to be regretted that so many withdrawals have taken place, it is not too late to hope that these societies will reconsider their position in the near future. Recent criticism has no doubt aroused the Council and delegates to their responsibilities, and I believe that ere long confidence will be restored which will enable the Union to successfully carry out its work. In conclusion I would appeal to all "friendly helpers and builders" to persevere in their efforts, that the Union may commend itself to the Fancy throughout the kingdom, as an institution, according to its own rules, that will advance and protect everything that is honourable in connection with cage bird matters.

T. Atkinson (Manchester).

[A letter from Mr. Reid unavoidably held over until next week.—Editor.]

The Feeding and Keeping of Skylarks.

Sir,—Seeing a lot of correspondence these last few weeks on the keeping and feeding of Larks, I thought I would send my recipe, which may be a little help to some Lark fanciers. At the present time I have two Larks singing all day long. This is the way I make my food (it will prove a little dearer than some of the recipes that have appeared in your columns, but I think a good bird is worth a good food): first put ½-lb. of lard in the oven; when it is melted mix 1½ lbs. of peameal, 1 arrowroot biscuit, 5 square puppy biscuits (both the biscuits I put through a seed mill), 4 eggs beaten up, ½-lb. domestic currants and a little salt; then put in the oven and bake for 20 minutes, the mixture to be stirred all the time to keep it from burning; when it is cold put it into air-tight tins and it will keep for months. Give it to the Larks in the dry state, as the lard gives it enough moisture, so that you do not need to apply water, and it does away with a lot of waste caused by the food going sour when it is moistened with water. I always keep a drinking fountain on the cage except when they are moulting, and then I put it on for one hour in the morning and one hour at night. I am sending you a sample of the food. Wishing our weekly friend, Cage Birds, all the success it deserves.

W. Astles.

[The sample of food sent by our correspondent appears to be in every way of a suitable nature.—Editor.]

Items from Ireland.

Sir,—I see that the hon. secretary of the Yorkshire C.C. of Ireland has at last let those outside the barrier into a little knowledge of the club affairs. I am clapping myself on the back for at least getting a reply to my note from him, when he ignored "Dishonoured cheque." Now, Mr. Hyland, you are only young in the Fancy, as far as I know, but I will go back only as far as you budded out, and point out a few facts to you, which will answer all your questions. Can you deny that some of the leading and oldest members of the Y.C.C. of I. signed a requisition calling on the committee to summon an extraordinary general meeting of the members to make this "individual" you attach all the blame to now, give a report on the financial standing of the club? Mr. Hyland, you were one of those who signed your name to an opposition document placing confidence in this individual, and now you have the cheek to put your pen to paper and try to win back the confidence of the old members. When you allowed yourself to be a party to the confidence document, you were led by the proverbial halter. With regard to the statement, Why throw the blame of "one individual's work on the whole club?" Why not, when every one of the present committee holding office signed and placed confidence in him? Now, Mr. Hyland, I am afraid you are in a mess. No, Mr. Hyland, I will not honour you with my presence on Monday night, but I will watch with interest the result of the "hole in corner" meeting that has been summoned; in fact, I may point out to Mr. Hyland that it is not a legal meeting. Challenge my statement if you dare, and I will point out to you my grounds. Mr. Sec., you have a lot to learn yet, and a lot to know about the people you are coming in contact with. I wish to point out to you that I hold no brief for the Y.C. and C.B.S., and therefore you have no right to bring matters in connection with this club or its doings into this correspondence. You say you don't want to cause any trouble in the "Irish Fancy." I am afraid the club you are the hon. secretary of did enough of that in its day to its own ruination.

Five "Mules" from a Cock Linnet Mule.

Sir,—I think the following may be of interest to some of your readers. I have five young birds three days old. The father is a Linnet-Canary Mule, which I bred myself four years ago from a Linnet and a yellow Canary hen. The mother of them is a Canary hen. I gave 2s. 6d. for her to a dealer two months ago. I keep all my birds in a room by themselves, and the Mule was flying about loose; and it did not matter where I put the hen Canary's cage, the Mule always found it out, and clung on to the front of it. So I opened the cage door and let the Mule in with the hen, so I know the Mule is the father of the young, as no other cock bird has been near the hen as long as I have had her. She laid five eggs. Four of them came out on the 21st of April, and one the 22nd of April, and the young seem to be doing all right. I will be very glad to show them to any bird fancier who likes to pay me a visit. I have always understood that it is impossible to get a Mule, let alone five from a Mule, as one of the parents.

John A. Murray.

41, Low Street, Mark Quay, Sunderland.

Wake Up, Fanciers!

Sir,—Seeing a letter on the above in your issue for March 26th, I should like to put my spoke in the wheel. I fully believe that birds properly cared for are better off than when wild. But how about the uncared for? How can we expect the public sympathy when hundreds of Finches are kept in cages 6in. long by 3in. wide, and great numbers are exposed for sale in the shop windows under very insanitary conditions and greatly overcrowded. It is no excuse to compare fanciers with those whose pastime is hunting or coursing, as two wrongs do not make a right, and surely you would not bring a fancier down to the level of such as these Why do not the British Bird and Mule Clubs take the matter up and unite with the R.S.P.C.A. and make it an offence to keep birds in smaller cages than are specified by them? There are hundreds of people who never read Cage Birds, and it is the duty of experienced fanciers to educate their ignorant brethren through this weekly paper, and so make the lives of hundreds of birds happy; then we could expect the sympathy of the public, but not before.

J. C. Quant.

Sir,—Mr. Coe is hardly the one to speak of "courtesy," considering how very far from being courteous was his first letter. It is "beneath his dignity" to refer to such scurrilous letters as those in the April 9th issue. Can he deny that he used objectionable terms himself? I suppose he desires a monopoly of abusive language. As a matter of fact, it was merely his attack on Cage Birds which induced me to answer him; otherwise I would not have bothered to "Limehouse" my "Socialistic nonsense" in your columns. It may interest him to know that I am fully as strongly opposed to Socialism as he is himself, but I utterly fail to see how this matter is "Lloyd Georgian Socialism"; it has nothing whatever to do with "class wars" or politics. The point is this: A firm was prosecuted for having British birds in a protected district, although the said birds were legally taken, *i.e.*, in a non-protected district. All other magistrates will follow Mr. Biron's ruling, if it be upheld, the Royal Society for the Prevention of Cruelty to Animals will receive a fresh "whip-up," and fanciers' lives will be made unendurable. What is Socialistic in protesting against this? I shall be thankful to Mr. Coe if he replies satisfactorily.

Constance D. Fitzmaurice.

Sir,—Seeing Mr. Elkington's and Mr. Coe's letters in Cage Birds, I should like to say a few words on the Wild Bird Protection Acts. I agree with Mr. Elkington that if something is not done we shall soon have to give up keeping British Birds and catching. Now, I have caught birds nearly every season for the last thirty-five years, and have seen the working of these Acts since the 1880 Act was passed. Some of the Local Acts are causing more destruction among our rarer birds than they are doing good, as practically a whole close season is no close season at all. I think if fanciers, catchers, and dealers would combine we ought to get a good close season and a good open season for all counties. If we do not take it up we shall soon have no chance at all. I have no sympathy with any man caught catching in the close season, if there is a reasonable open season in the county. Mr. Coe says the Preston and Flowers case is an isolated one; but I can give an instance where a bird-catcher was summoned before these land-owners, and the case was adjourned as they did not know the law, causing that man to walk and ride 48 miles in the two journeys, to appear at their court. Then the owner of the land sat on the Bench against him! Now, what chance had he of obtaining justice? Yet these very same men were what are termed "sporting men," and for a working man to speak of sport for pleasure or profit in their hearing is enough to have the whole lot on him at once. I have seen Goldfinch nestlings in the summer in this same county, in the season, hanging in cages to be fed by their parents, within a short distance of a policeman's house, which plainly shows that these cases are only brought for the purpose of pleasing these land-owners, and not for the benefit of the birds. I learned later that all these birds died. Yet a bird-catcher caught catching birds in this county is fined, even when he has leave to go on the land. Fanciers, wake up, I say, and let us see what we can do to protect our interests, whether we be fanciers, dealers, or catchers.

Agricultural Labourer.

Hybrid Prospects near Bangor.

Sir,—A few of us about Bangor have got the "fever" badly. I see where you have noticed this week the formation of our new society. I am pleased to inform you that I have already a Greenfinch hen sitting on fertile eggs to a Goldfinch, and a Bullie hen building. I have fifteen hybridising pairs (exclusive of muling pairs and Greenfinch feeders) put up this year, and as I have gone to considerable expense to secure separate aviary spaces for each hybrid pair (excepting the Canaries, of course), I expect some small results. My pairs are:—Canary, Goldfinch, Linnet (2 pairs), Greenfinch (2 parts), Siskin, and Redpoll, with Bullfinch hens. Goldfinch-Greenfinch (2 pairs), Bramblefinch-Chaffinch (2 pairs), Yellowhammer-Bramblefinch, Chaffinch-Yellowhammer, British Siskin-Brazilian Red Siskin. No less than ten fanciers in Bangor are trying to my knowledge for hybrids between Britishers this year. As very tame horse-moulted birds are being used in some cases, there is every prospect of a good deal of success. Much interest is likewise being taken in Canary and mule breeding in Bangor; in fact, all over the district, as in several of the neighbouring towns, societies are also being forced.

"Cage Birds" Great Essay Competition.

The Result in all Five Sections.

In our Literary competition, it will be remembered. we oftered five cash prizes of One Guinea each for the five essays adjudged the best on the subjects respectively of Canaries, British Birds, Mule or Hybrid Breeding, Foreign Birds, and The Fitting-up, Stocking, and General Management of a Bird-room or Aviary.

The success of the Competition has proved greater than that of any previous one promoted by CAGE BIRDS, and in the large number of papers received and the excellence of the vast majority of them is to be found the two-fold reason for the delay in publishing the result. The judges have had a heavy task, for the essays of many of the competitors differed but little in the matter of merit, which rendered the allotting of the prizes by no means easy. However, this has now been accomplished, and we have to thank the judges for the time, trouble, and care they expended in arriving at their decisions.

The Canary Section.

The first place has been assigned to an essay entitled "The Crested Canary: Its Management Month by Month," the writer of which is:

MR. A. FIFIELD,
6, Buckingham Street,
Oxford.

This paper was run very closely, in the estimation of the judges, by the contributions of Messrs. A. G. Filby (London, W.), W. Reid (Sunderland), R. H. Livingstone (Rutherglen), J. Ovenstone (Grangemouth), R. W. Smith (Gateshead-on-Tyne), and T. Pope (Plymouth), while other essays considered worthy of very high commendation were those of Messrs. E. Williams (Liscard), H. G. Green (Leicester), E. Bingham (Biggleswade), J. C. Caine (Birmingham), A. C. Henderson (Lanark), F. Gelder (Little Horton, Bradford), T. Beors (Pickering), A. B. Forse (London, N.E.), E. J. Cundall (Halifax). A. Burtenshaw (Worthing), and R. J. Elleby (Ardwick). Mr. Fifield's article will be found printed in this issue.

The British Section.

This was probably the most difficult of all, and it was only after long consideration that the essay written by

MR. R. W. VANDERBEN,
35, Henry Nelson Street,
South Shields,

was finally voted to be winner of the guinea prize. This fancier's contribution is something out of the common, yet thoroughly practical, and is entitled "British Birds: A plea for a common-sense treatment." Two essays were held to be practically of equal merit to the winner, viz., Mr. B. J. Pounsett's (Upper Norwood) on "The Skylark, caged and free," and Mr. F. E. Ryder's (Cambridge) on "Our two commonest Tits." Other specially good articles were those of Mrs. E. M. Sargeant (Worcester),Miss C. D. Fitzmaurice (Kilrush), and Messrs. J. D. Young (Bath), E. Milne (Blairgowrie), W. B. Jepson (London, S.E.), W. Downing (Manchester), L. Gibbs (Upper Edmonton), J. Thomas (Otley), J. Lawrenee (Braeknell), S. Stephens (London, S.E.), W. J. Pitcher (York), J. H. O'Neile (Lurgan), A. and F. Hartley (York), H. Wilson (Manchester), W. M. Thomson (Moffat), and W. C. Drew (Manchestor).

The Hybrid Section.

The first prizo hero has been awarded to

MR. E. COLLINS,
55, Gloster Road,
Barnstaple,
N. Devon,

for an essay entitled "The Pleasures and Difficulties of Hybrid Breeding.

This fancier was run a very tight race by Mr. D. E. Alexander (Bangor, Co. Down), who sent in a highly interesting and instructive account of his experiences in the pursuit of the "elusivo Hybrid," which the judges unanimously considered came in a close second to the contribution of Mr. Collins. Other papers adjudged worthy of special mention were sent by Messrs. A. Sutherland Grant (Kirkcudbright), J. Worsley (Northampton), J. Grimshaw (Hale), J. Sparks (St. Helens), J. B. Moore (Whitehaven), E. Williams (Liscard), and J. Ovenstone (Grangemouth).

Aviary and Birdroom Section.

The winner of the guinea prize is

MR. H. C. BROOKS,
2, Devonshire Road,
Horsham,
Sussex,

whose article is entitled, "Fitting up and Stocking a Bird-room." Mr. Brooks's position was closely challenged by Mr. H. Meeds (Mansfield, Notts), with an article on his aviary, a paper of no little interest and merit. Other contributions marked "very good" by the judges were received from Messrs. W. Wallis (Birmingham), T. Oliphant (Maidstone), Dr. Johnston (Dundee), R. Earl (Bungay), A. A. Pinnion (London, S.W.), and W. Cole (Harlow). Mr. Brooke's article (or, rather, part of it) will be found included in this number of our paper.

The Foreign Bird Section.

Several articles in this section were on a very level plane, and to that entitled "Outdoor Aviaries for Small Foreign Birds," sent by

MISS E. M. BURLINGHAM,
Lansdowne,
Evesham,

the prize was awarded only after close competition with the contributions of Miss K. Webb (Cambridge), and Messrs. J. H. Booth (Bermondsey), and W. Doran (Dublin). Other excellent essays came from Mrs. Edwards (Liverpool), Mrs. B. J. Moore (London, S.W.), and Messrs. E. Williams (Liscard), J. Sparks (St. Helens), A. Green (Arnold), and F. Kings (Sutton Coldfield).

The Four Guinea Painting.

To decide the destination of the original painting of birds (value £4 4s.), gave the judges less trouble, curiously enough, than the awarding of any one of the section prizes, for as the best essay out of the five sections, all the gentlemen officiating, "plumped" for that on Hybrid Breeding, sent in by

MR. E. COLLINS (Barnstaple),

to whom we shall have pleasure in forwarding the chief prize in the course of the next few days, when all the winners (to whom we extend our congratulations) will also be forwarded cheques for one guinea.

OUR COLOURED PLATE.

Domestic Bliss in Canaryland.

Our coloured plate which accompanies this Spring Issue, is one, we think, that will appeal to all who have a warm corner for birds in their hearts, for the subject is peculiarly appropriate to the season of the year, and the happy inspiration of our artist, Mr. Norman, has been worked out by him with characteristic skill and artistic perception.

"Domestic bliss" every fancier strives to attain in his bird-room, and often enough his birds second his endeavours in a manner that leaves him in light-hearted mood, smiling cheerfully as he watches the full broods of young growing apace under the tender ministrations of their parents. Lucky man—none so happy as he.

But, unfortunately, not all married birds "hit it off" in a manner that ensures domestic bliss following in its train. "Nagging" wives are not unknown, and "wife-beaters" are to be found in many a room, whilst sometimes both parents exhibit an indifference to the well-being of thoir children which can only be termed deplorable.

Why there should be "this thusness" is usually something of a puzzle. Canaries. when entering upon the responsibilities of matrimony, have everything in their favour: the plentitude or scarcity of "work" worries them not at all; food and luxuries are showered upon them with unstinting hand; no mothers-in-law or relatives intrudo upon their domostic peace—in short, they have nothing to distract them from the business on hand. Yet how often they fall short of the fancier's ideal! And yet, again—to turn to the cheerful side, as befits the springtimo of promise—how often they succeed beyond the fancier's brightest expectations, and their children, metaphorically speaking, rise up and call them blessed.

Happy prospect! Wo will leave it at that. Contented birds, full clutches of eggs and five youngsters to every nest—theso are our worst wishes to all bird-breeders for the season now in its infancy.

Wanderers from the Chosen Path.

The writer recently heard of a pair of Kestrels which had sadly departed from the usual modo of obtaining a living, and had taken some thirty young Pheasants from the rearing grounds before the Hawk's nest could be detected. As a rule theso birds live chiefly upon mice, beetles, and other small vermin.

An Ancient Ring Dove.

My wife's Ring-Dove was born in 1888, writes Mr. W. S. Dick-Cunyngham to a contemporary. She enjoyed ono short year of wedded bliss, and then becamo a widow. Shortly after th's she flew away ono morning, to return to her sorrowing mistress two and a half years later (enemies doubt her being tho samo bird). Since then she has enjoyed the universal admiration of the household, and will often sit on her nest on the dining-room tablo at mealtimes and, when sho pleases, come and take a toothsome morsel from my plate. When thirsty she will drink out of a wine-glass. For her advanced years she is wonderfully well-preserved, though the rigours of a Highland winter have temporarily robbed her of her voice. She has one passion (for which she would sell her eggs): cheese.

Diphtheria in Birds.

Is it Transmissible to Human Beings?

Some few days ago wo received a letter from a reader, signing himself "Noviee," in which he asked our opinion as to the possibility of an outbreak of diphtheria amongst his children having had its origin in his bird-room, a suggestion to this effect having been made, he states, by his doctor. Fanciers to whom "Noviee" had mentioned the matter scouted the idea; hence his further enquiry addressed to CAGE BIRDS. We forwarded "Novice's" letter to Mr. Geo. Yates, a member of the Royal College of Veterinary Surgeons, the gentleman who has charge of the post-mortem department (vide "Questions and Answers" pages) of our journal. His reply, which we publish below, is an emphatic negative. Mr. Yates states that diphtheria as affecting human beings is not transmissible from birds to man; further, that many diseases of mankind for the outbreak of which animals have been blamed (and that by medical authorities), in reality could not possibly have had their origin in these creatures.

An Opinion by Mr. G. Yates, M.R.C.V.S.

A correspondent, "Novice," desires to know whether there is danger of contracting diphtheria from a bird-room. The question arises from the fact that one of his children suffered from this complaint several months ago, recovered, and after an interval of six months similar symptoms developed, and on medical advice being again sought, a suggestion that the bird-room was the source of infection was offered as the medical opinion. Now, our correspondent, who states that he has not long been in the Fancy, is very loth to give up his hobby, and being assured by many fanciers (and quite rightly, too) that birds kept under clean and healthy conditions are not a source of danger to humans, and not responsible for the many diseases attributed to them, is desirous of keeping his birds if possible: hence his enquiry.

In the first place, he wants to know if the bird room is the source of disease. By this we presume he means danger from smells, etc., which may arise. Again, he says he is assured by others that birds will not cause disease to humans, upon which point he requires to be quite clear. These are two questions entirely different, and they require an explanation from both sides, viz., medical and veterinary.

We can say with every confidence: follow the advice of your fancier friends. We tell you to keep on with your hobby, and at the same time wish you every success. There is far too great an importance attached by medical authorities to the danger of infection of disease from animals to man. There are some diseases certainly that are sources of danger; but, again, many attributed to an animal source are found never to affect animals. Scarlatina and other diseases have been blamed to cattle, when the latter do not suffer from these diseases.

One Case: And that Unsubstantiated.

The diphtheria of birds is in no way related to human diphtheria. Not one indisputable case of its having been contracted by people from association with birds has ever been known. Again, there is no real connection between the two diseases, for it is a great question as to whether diphtheria of birds is really true diphtheria, or is a disease only resembling it in character. There are cases on record (mere assumptions these) alleging its having been conveyed from animals to man. These reported cases emanate from medical sources, owing to the entire ignorance of the medical men in question of the diseases of animals. One outbreak was even referred to a pony (as the source of danger), which, quite as a coincidence, happened to be suffering from a nasal discharge at the time; but we know absolutely that horses do not become affected with diphtheria.

The only case on record worthy of description is that of Gerhardt. He states that in a chicken-hatching establishment two-thirds of all the workmen attending on the fowls (which were suffering from diphtheria) became affected with this disease. The case did not come under his own personal observation, however, so that it cannot be substantiated. If it were true then, considering the commonness of chicken diphtheritis, and the enormous number of people engaged in chicken raising, the disease would become a veritable plague.

As diphtheria is not communicated from birds to humans, it therefore follows that exhalation from their bodies, and those arising from the excrement as smells, cannot be held responsible for its transmission. There can be no doubt that a human being, if not always, is almost invariably the source of infection, the infective material being the discharges from the nose and mouth (which contain the bacillus), and the disease is spread through intimate association. Children, susceptible subjects, are brought together at school, share sweets, kiss, and possibly cough infective spray into a confined space. Recent years show an increase of diphtheria in urban districts, and particularly in London. It is very probable that this increase is the outcome, at least in part, of compulsory school attendance.

Sources of Contagion.

It may be asserted, however, as against this, that there is no evidence of the disease existing in the neighbourhood. This is fallacious and misleading, as it is well known that a peculiar feature of this disease is that a person may be so slightly affected as to go about apparently healthy and yet be a danger to his or her associates by spreading the disease. Of recent years it has been found that even persons who had been affected years before may be a great source of contagion in disseminating the disease. Whilst, again, healthy subjects may carry it from having nursed or come into contact with, affected persons. Transference so brought about would explain many obscure cases, for it is shown that in a dry state the bacillus can retain its vitality for a very long time under favourable conditions—such as absence of light, etc. Thus there is danger of transmission by soiled linen, toys, cups, etc. The bacillus has been found in the dust of the sick room and in the hair and clothes of those people nursing cases.

The writer can fully sympathise with "Novice," as his own family were once put to great inconvenience and expense from the occurrence of the disease in the house. The source of disease in this case was held to be smells arising from drains which was but imaginary, seeing that recent high medical authorities definitely state that smells arising from drains are not known to be vehicles of the disease. The subject was a brother who had not even resided at home, but on paying a visit lasting but three hours he complained of a sore throat. On seeking medical advice diphtheria was proclaimed. The medical attendant, being the medical officer of health in the district, notified the disease to the authorities. The patient was immediately transferred to an isolation hospital, and instructions were given us to have up the drains, resulting in household confusion for several weeks, and an expenditure of £70 for "work done."

A Deodorant for the Birdroom

To correct any smell that may arise in the bird-room "Novice" may employ a deodorant (an agent which corrects unpleasant odours), such as a 2½ per cent. solution of Sanitas, which gives forth an agreeable smell, and is at the same time harmless to the occupants. A small quantity of this solution sprinkled on the floors of the cages will suffice to bring about the desired result, and render them sweet. Of course, it is understood that they are cleaned out reasonably often.

Insanitary surroundings are often responsible for sore throats, but not diphtheria, unless the bacillus itself is present. And as there is no similarity between the diphtheria affecting birds and that affecting human beings, therefore it follows that there can be no danger of communication in this way.

I beg to thank you and your artist for reproducing the picture of my clear cap Silver Lizard on the front page of the foremost paper of to-day, CAGE BIRDS, on April 23rd. The bird won first and special for best Lizard at Oldham First Feather show, and after the moult won first and special at Oldham, first and special for best silver at Rochdale Good Intent, first and special for best silver at Pendleton and Salford, first and special for best Lizard in show at Middleton, under our leading specialist judges. I am pleased to inform you that he is a "chip off the old block," and is supposed to be the leading light of the last show season. He was bred from my late "Silver King," a great winner in his second year, and "Golden Queen," which was second at Rochdale Good Intent, first and special for best Lizard at Oldham, and then finished up with first at Scottish National. Young "Clear Cap" is paired with a gold hen, sister to my broken cap (cock), champion broken cap of the season. —J. HAMPSHIRE (Oldham).

CLAUDE ST. JOHN'S
CANARY BREEDING
PRICE —FOR BEGINNERS.— SIXPENCE.
116 Pages. Many helpful illustrations
A thoroughly practical up-to-date Guide to the cult of Canary Breeding.
A Bulky and Valuable Volume.
Copies, post free, 7d. Cloth, post free 1/-
'Cage Birds," 154, Fleet St., London

The Young Naturalist.

Prizes of 1s. and two of 6d. each will be given weekly for the best three anecdotes about birds written on postcards. Competitors must be under sixteen years of age, and state whence stories are taken. Two stars indicate the Winning Contribution; one star the runners up.

**The Little Robin.

As I sat by my window this evening,
A Robin came flying along;
Then he hopped and he twittered, then chirping,
He sang me a beautiful song.
On a sudden his bright eye discovered
A cord which the rose-bush confined.
"Oh, ho!" thought the Robin, "what fortune!
How nicely my nest will be lined!"
Then off to the fir tree so shady,
My Robin flew swiftly away,
And deposited safely his treasure
With some small bits of straw and of hay.
Now think of this Robin, dear children,
When something perplexes, I pray;
Stop and sing a sweet song for a moment,
And the trouble will vanish away.

Taken from "The Children's Friend," and sent by Bertha Almond (age 13), 35, Aston Street, Blackburn.

*Our Blind Canary.

We had a pair of Canaries, the cock of which was blind. After being kept in a small cage we put them in a large aviary. The cock could not see the food, and got into a corner. The hen called him over by chirping. He heard her and went over and took a few seeds. Then she went over to the water and called him. He went and drank some. Then she jumped up on to a spar and called him, and he, hearing, followed, until he knew his way about a little.—Sent by Maude Laing (age 12), 7, Cumin Place, The Grange, Edinburgh.

*Tame Bobbie.

We have a porch to our house covered with ivy. In it is a Robin's nest with five young, and a Jenny Wren sitting on eggs. Last year the Robin built in the same place. We used to feed it. Father gave me stale egg food and a few meal worms, and when I put them on a plate the Robin would come and feed while we held it.—Sent by Teddy Hewitt (age 8), Ivy Cottage, Mulbarton, Norwich.

Under the White Rose.

THE National Green Marked Yorkshire C.C. has now come to the conclusion of its first year's work, and a general review of same gives its officials and promoters entire satisfaction. The only drawback that can be pointed out is in the number of entries; at the 10 shows where the patronage has been given the average comes out at 12 per class. But here it must be borne in mind that the club was not formed until the breeding season of 1909 was fairly well advanced, and breeders had not really catered for the variety. But this year green marks are to be found in many rooms in increasing numbers. The total number of paid-up members (note the words), is exactly 100, and the financial side is all right, the year finishing with a balance in hand of £1 19s. 3d., out of which the members voted to their esteemed secretary, Mr. F. Armstrong, a grant of £1 10s. as a slight recompense for the hard and faithful work he had performed during this his first year of office. This gentleman has promised a special to same value for next season's competitions.

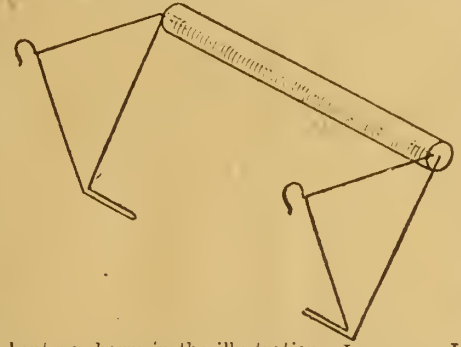
SOME fanciers would like something to be done by the above club in regard to the foul marked birds. Their contention is that (although each judge is instructed to place the birds irrespective of markings, except in cases of equal merit, where markings must, and should, have preference), the nicely marked bird is more favoured than the foul, and that if possible fouls should be catered for to some extent; the only drawback to me is: Where shall the distinction between the two classes be drawn? Many times at shows where classes for both were provided, I have seen lighter marked birds win in the foul classes than in the uneven marked classes; and this should not be so. Perhaps some friends will give their opinion as to where an uneven mark ends and the foul begins.

OPEN Norwich Plainhead Club members have responded very well to the secretary's appeal in regard to voting papers; over 60 per cent. have been returned, and I think the whole of the members will be pleased to hear that Mr. A. H. Waters has been elected at the top of the poll, and will therefore be vice-chairman during the next year. The committee is very representative, and if all will do their little quota for the advancement of the club, there is little to fear.

THE Y.C.C. hold their annual general meeting to-day, Saturday, as also do the British Bird and Mule Club of the Yorkshire County. The members of the latter I would ask, Have you seen the first part of "Cage Bird Hybrids"? It is now to be had, and a perusal of its contents will be of great value and interest to those who are having a "dab" for "something good." The plates alone are worth the nimble sixpence for which part one can be purchased.

THE C.M.Y.C.C. also intended to hold their annual meeting to-day, but could not work it in comfortably. They have a lot of business on hand, therefore have postponed it until Saturday, May 14th, 5.30 p.m., at headquarters, Market Tavern, Edwin Street, Bradford. Will members please note?

FANCIER friends of Mr. H. Martin, secretary of the Shipley O.S., were delighted to note his success in the claim for damages against a plumber for the loss of 13 Canaries, whose deaths were caused by suffocation in consequence of an escape of gas from bad workmanship in fixing up a stove for heating purposes, reported in last week's CAGE BIRDS. The damages, £16, obtained will help Mr. M. a little in rebuilding up his strain, but we all know that when some of the best go it takes both money and time to get into the groove again. Good birds are not bred in every nest. It is to be hoped he will have a successful season, and not be left far behind through this misfortune.



STRAIGHT 'UN.

Illustrated Ideas

Every "Illustrated Idea" used will entitle the sender thereof to two shillings and sixpence.

No. 404.
A Simple Aviary Perch.
Sent by Miss R. Steele, 11, Thornton Road, Wallasey.

Enclosed is a sketch of a simple aviary perch of which I had long felt the want. I hope the idea may prove of use to other aviarists. Procure a ¾in. round stick; cut to suitable length; and drill two holes in either end to fit the wire. The sides are composed of short lengths of wire

bent as shown in the illustration. I may say I have an aviary 6ft. by 3½ft., and the birds like this class of perch in preference to a couple of trees I have in the aviary. I have been keeping foreigners for the past eight years.—RENEE STEELE.

No. 405.
A Useful Feeder for Young Birds.
Sent by Mr. H. Wheatley, Spring Street Burnt Mill, near Harlow, Essex.

Enclosed is a sketch of a feeder of young birds, when these are being hand-reared. To make, get a piece of wood and cut it, so that it appears as in the illustration. Then by

putting a small piece in as a wedge you will find that it will resemble a bird's beak, so that the birds can be fed quite easily.—H. WHEATLEY.

SOME BREEDING RESULTS OF THE 1910 SEASON.

Notes on the results of the present breeding season, or of any interesting happenings, are invited from the secretaries of societies and others, and must be accompanied by the sender's name and address in every case.

Bo'ness and District.

Although early in the year, the weather being very bad, breeding results are very favourable here, some promising Plainheads being already on the sticks. Also there are a few Siskin mules and Linnet mules and a few nests of eggs down from hybrid pairs, results of which I will let you know later on.—FINDLAY MCGILLIVRAY (Bo'ness).

YORKSHIRE UNION OF C.B.S.

A Meeting of the New Council.

The first meeting of the new Council was held on April 23rd, at the Market Tavern, Bradford, at 5.30, Mr. F. Hammond, president, in the chair. All but three of the delegates appointed to the new Council were present, and a heavy amount of business was transacted. The president took the opportunity of thanking the Council for the confidence that had been placed in him, in his new position, and hoped that when his term of office had expired, the same confidence would still be retained in him. The minutes of the previous meeting were passed as read. An application from Morley and District C.B.S. to join the Union was favourably received by the Council, and they were admitted as members by a unanimous vote. Two of the judges whose names were drawn at the ballot were unable to accept these positions on account of previous engagements, and the Council balloted for two to fill their places. This resulted in Mr. R. Carr being selected to judge Eccleshill show on November 12th, and Mr. J. Greaves Great Horton O.S. on November 19th. Correspondence dealing with the balloting for judges at the last Council meeting received from Windhill O.S. was read, and that society's delegates accepted the explanation as given by the Union secretary on the matter, favourably. The resignation of Hoyland and District O.S. from the Union was accepted with deep regret, this step being taken owing to financial difficulties. Manningham C.B.A. laid a complaint against one of their members who was in arrears with his subscriptions, and the Union secretary was instructed to write the defaulting member, asking him to attend the next Council meeting to give an explanation, if these arrears are not paid in the meantime. An objection laid by Halifax O.S. to a technicality that occurred in the balloting for judges at the last Council meeting, was withdrawn by their delegates on a satisfactory explanation being given by the Union secretary. Great Horton O.S. applied for permission to hold an open First Feather show, and this was granted unconditionally. Brighton C.B.A. applied for permission to judge Yorkshires at their show under the standard of the Union; this was granted unanimously. The question of a Cinderella Club Show was again considered, and several societies gave a decision in favour of it, but the representatives of other societies said that they had not had the opportunity of placing the question before their members, and asked that it be again deferred until next meeting, when it is hoped that a satisfactory conclusion may be arrived at. The Council then elected a sub-committee to transact any business not of vital importance. The following gentlemen were elected:—Messrs. E. W. Johnson, R. Sutcliffe, W. Cruise, H. H. Towers, W. Crabtree, A. Cooper, and J. E. Hudson. Several propositions were placed before the meeting as to what amount should be paid as subscription for each member returned to the Union. Additional expense will be incurred this year owing to delegates' travelling expenses having to be paid by the Union, and several delegates expressed the opinion that the amount per member should be increased to meet this; four propositions were placed before the Council—6d., 8d., 9d., 10d.—and after they had been voted on, the old fee of 8d. per member was passed for the ensuing year. A question then arose as to how the delegates should be paid, and a resolution was unanimously passed that they be paid at the minimum rate of travelling from the headquarters of the society they represent to the place where the meeting is held. A register will be kept of all delegates' attendances at the Council meetings, and travelling expenses paid according to same. Persons acting as substitutes for delegates will please bear in mind that a written note must be presented from the secretary of their society intimating the inability of the delegate to attend, or otherwise the delegate will be marked as absent, and no travelling expenses will be allowed, according to Rule 7. The Council again decided to give 16 gold novice medals of equal value to last year's for novice members of the Union to compete for at Union shows—12 for Yorkshire classes and 4 for Norwich classes. The secretary was instructed to write the following firms asking them to supply sealed tenders to the Council for the printing of Union handbooks and show rules:—Messrs. L. Hodgson (Bradford), E. Foulds (Bingley), "Fur and Feather" (Idle), Smith and Fusten Hagen (Bradford), and E. Wild (Halifax). It was also decided that the secretary write each society holding an open winter show, asking them if they were prepared to print their schedule of classification in the Union handbook, and also to enquire how many show rules they would require to send out to exhibitors who are not members of the Union. A resolution was also passed that the names of the society whom the president and vice-president represent, be placed opposite their names in the Union handbook, along with a list of past-presidents, and the societies they have represented. The meeting terminated, the president thanking the delegates for their attendance and attention. Will all those desirous of repeating their advertisements in the Union handbook, or any others who desire to have one in this year's, kindly let me know same at their earliest convenience? The charges for same are: Full page 7s. 6d., half page 3s. 9d., third page 2s. 6d., quarter page 2s., and breeders' cards 1s. Closing time for same will be duly announced later.—H. HILL, secretary, 15, Settle Terrace, Thornton Lane, Bradford.

"Our Canaries": Part 1 of the best book ever published about domesticated Canaries is now on sale. Post free, 6d.

Books for Bird Lovers.

Brief particulars of some of "Cage Birds" SPECIAL PUBLICATIONS for keepers of birds, with post free prices.

THE HYGIENE OF BIRD-KEEPING, 1/1.—By W. Geo. Creswell, M.D. Thoroughly treats of modern hygiene (the science of health) in bird-keeping.

SEPTIC FEVER OR CANARY PLAGUE, 7d.—By R. H. Clarke, M.D. The only booklet published concerning this dread disease, which Dr. Clarke has given very special study.

THE NORWICH PLAINHEAD CANARY, 1½d.—By J. H. Payne. Pronounced by all experts to be a most valuable pamphlet concerning the breeding of the variety; written by one of our leading judges.

CANARY BREEDING FOR BEGINNERS, 7d.—By Claude St. John. A Practical, up-to-date guide to Canary breeding, designed specially for the use of the beginner. Deals very fully with the choice, sexing, and mating of the birds, feeding for condition, the cages and their fittings, the bird-room, egg-food, nest-building, rearing and moulting the young, colour-feeding, training for show, and all the difficulties likely to confront the breeder.

MEATING-OFF AND FEEDING SOFTBILLS, 6½d.—By John Frostick. No fancier of Insectivorous Birds who wishes to succeed in his hobby can afford to be without a copy. It also contains notes on Bird Trapping, Cages, etc.

SEEDS, FOODS, AND WILD PLANTS FOR CAGE BIRDS, 1/2. — By various leading authors. Full information on the seeds suitable for all cage birds, their food values, uses, etc., with descriptions and illustrations of the wild plants indispensable to the successful keeping of British and other birds.

HOUSE'S CANARY MANUAL, 1/2.—By C. A. House. A thorough, practical guide to the general management and breeding of Canaries, dealing fully with the breeding, etc., of every member of the Canary family, including the Roller (or Singing) Canary. An illustration of each bird, by the master Canary artist, Mr. H. Norman; exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge.

BUDGERIGARS AND COCKATEELS, 6d.—By C. P. Arthur. The breeding of Budgerigars and Cockateels is recognised as one of the most profitable and pleasure-giving sides of foreign bird-keeping. This eminent authority gives very full details upon how to keep, feed, breed, tame, and teach them to talk.

PET RABBITS, CAVIES, AND MICE, 1/1½.—By George Gardner. Full information on housing, feeding, breeding, exhibiting, and keeping for profit. A complete practical guide, with illustrations from photographs.

FOREIGN BIRDS FOR BEGINNERS, 1/1.—By W. T. Page, F.Z.S., etc., Foreign Bird Expert to "Cage Birds." A highly instructive Manual. It contains a magnificent coloured plate and a number of black and white illustrations. Indispensable to all keepers of Foreign Birds. Replete with useful hints.

BRITISH BIRD MANUAL, 2/3 (cloth bound).—By H. Norman; or may be had in two parts. Part 1: "Hardbills," and Part 2: "Softbills." Either Part, price 1/1, post free. Each part contains a beautiful and life-like coloured plate and numerous illustrations of birds and cages. Up-to-date information on the keeping of British Birds; full of extremely valuable hints.

COLOUR FEEDING OF CANARIES AND OTHER BIRDS, 3½d.—By J. W. Ramsden. Tells you how to mix the colour-food, and how to moult the birds to get the richest possible colour.

THE STOCK BOOK, 7d.—By G. E. Weston. Of our invaluable "Breeding Room Register" a well-known fancier has said:—"It makes bird-breeding easy." No breeder of birds can possibly afford to be without it. It simplifies the operations in the bird-room and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred. Contains both Pedigree, Breeding, Young Bird, and Show Registers of simple and unique character, in addition to useful account pages, and many invaluable "Hints for Emergencies."

AVIARIES, BIRD-ROOMS, AND CAGES, 2/3 (cloth gilt).—By H. Norman. Contains ten lovely full-page photographic plates. A practical guide which deals thoroughly with the proper Building, Fitting, and Management of Aviaries and Bird-rooms, and the making of Cages.

YORKSHIRE CANARIES, 1/1½.—By H. W. Battye (Past President of the Yorkshire Union). Absolutely the very best Handbook dealing with the Yorkshire and its sub-varieties. Contains complete instructions upon Pairing, Breeding, Moulting, and successful Exhibiting, also how to treat in both health and disease.

NORWICH CANARIES, 1/1.—By C. A. House. Tells the fancier all that he needs to know to enable him to become successful as a breeder, and exhibitor of the Norwich Plainhead. The chapters on "**Forming a Stud,**" and "**How to Produce the Ideal**" are worth the cost of the whole book many times over.

BIRDS OF THE COUNTRYSIDE, 5/4.—By Frank Finn, B.A., F.Z.S. A handbook to the wild life of all our familiar British birds; their appearance and habits accurately described. With 12 beautiful coloured plates, and 118 photographic illustrations. A charming gift book.

PETS, AND HOW TO KEEP THEM, 5/4.—By Frank Finn, B.A., F.Z.S. Gives the correct method of housing, feeding, and managing every kind of pet; all sorts of animals are dealt with—monkeys, dogs, cats, lizards, tortoises, also gold and other fancy fish, while there is a large section devoted to birds. Contains many coloured plates and illustrations from photographs. Another charming gift book.

FANCIERS' PRINTING.—Fanciers requiring business notepaper, postcards, trade envelopes, etc., should write us for a quotation. We are now in a position to supply these at specially low rates combined with first-class work. Artistic memos., with block of any desired bird, and fancier's name, address, and 12 words of description, 250 2/-, 500 2/6, carriage paid.

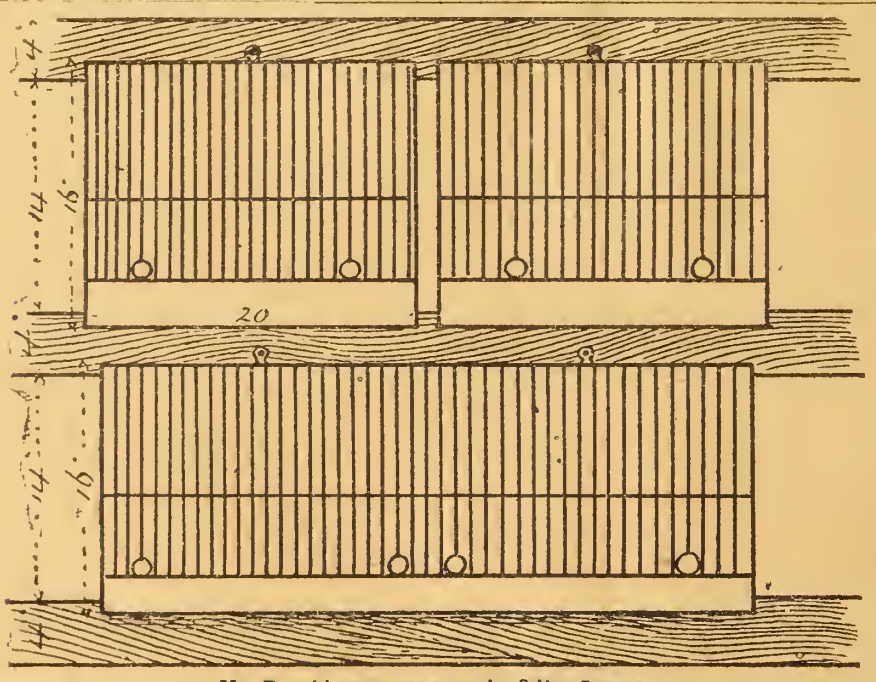
Fitting up and Stocking a Birdroom.

By H. C. BROOKS (Horsham).

This is the Essay awarded FIRST PRIZE in "Cage Birds" Literary Competition in the Aviary and Bird-room Section. Readers should note the announcement concerning the Competition which appears on page 424 of this issue.

Much of one's success in bird keeping is due to having a well-arranged bird room, and it is my intention in this article to offer a few suggestions on the fitting up, stocking, etc., of such a room, with the idea of helping somewhat fresh recruits to the delightful hobby of cage bird keeping; I do not, of course, attempt to teach the old hands, who are quite capable of taking care of themselves, and from whom I could no doubt myself learn much.



I will not dwell at length on the selection of a bird room, as I apprehend that most fanciers have no choice in this matter, having to content themselves with whatever room in the house is available. But, where possible, a room should be chosen where the temperature varies as little as possible, and one into which plenty of light and air can enter. Some fanciers prefer one aspect and some another; and I don't think it really matters whether the bird room faces east, south, or west, but I should endeavour to avoid one with a northern aspect.

In addition to breeding cages, some flight cages will be required. These, too, should be of the box pattern, and similarly constructed to the breeding cages, and of about the same dimensions, except in length, which should be double or treble that of the breeders.

Every room should contain also a few single stock cages of a size suitable for putting one or two birds in.

Lastly, some show cages—according to the variety or varieties of Canary it is intended to keep—should be provided. Whatever the variety of Canary kept, however, it is as well to have a few Yorkshire show cages, as besides making excellent nursery cages for the young birds, they are very useful for running birds into from the larger cages when these birds are wanted for any purpose. The type of show cage used for Norwich, Cinnamons, etc., is not adapted for this purpose.

As regards seed hoppers, drinkers, etc., have all these of the same pattern, as this gives a better appearance to the

Mr. Brook's arrangement of the Cages.

The Floor and Cages.

Having decided on a room, it is necessary to proceed to fit it up so as to make the best use of it. Dealing first with the floor, I recommend that this be covered with linoleum or floorcloth, as it is then much easier to keep clean, a wipe over every week or so, and an occasional scrub with water, to which has been added a little disinfectant, such as Izal, Jeyes' Fluid, Sanitas, or carbolic, being all that is required to keep the place sweet and clean. If the room is papered the walls will require nothing done to them beyond being swept down, but if they are bare a coat of distemper would improve their appearance.

I will next deal with cages. What class of cage is required depends upon what birds one intends to keep, but I will assume that it is proposed to keep Canaries, in which case it will be necessary to have several kinds of cages.

Firstly, breeding cages will be wanted, and these should be all of one pattern. There are many good makers of cages, and it is a matter of opinion only which turns out the better article, and which is the better pattern to adopt. Personally, I prefer the single breeder of the box pattern (that is, wood on all sides except the front), fitted with moveable wire front, sand tray, nest pan, seed hopper, drinker, and egg pan. I like the door to be in the front only, as I find that doors cut in the ends are very rarely used, and afford a too convenient harbourage for that dread pest, the red mite. I also like my cages enamelled inside and stained and varnished outside, as they can be more easily cleaned than when distemper is used.

room, and a certain advantage accrues by having the fittings interchangeable. It is also advisable, although it is not a necessity, to have a few spare seed hoppers, drinkers, egg pans, etc. Lastly, a number of bath cages (fitted with earthenware baths) should be obtained, as the birds must be given a bath frequently—on favourable days.

Having got together a stock of cages and accessories, the next thing to do is to suitably arrange the cages around the room. Of course, they can be stacked one above the other in rows against the walls, but this method is not to be commended, as it has several drawbacks. For instance, if one of the cages is wanted from the bottom row, it cannot be removed without disturbing all those above it, and in the breeding season particularly this is to be avoided. This nuisance can be got over in two ways—either by having a rack in which to place the cages, or by hanging each cage separately on to a nail or screw in the wall. A rack is generally considered the better of the two, and if it is decided to have this it should be constructed lightly but strongly, and with due regard to the sizes of the cages it is intended to hold. Instructions for making these racks have many times been given in the Fancy Press.

If, for any reason, a rack is objected to, the same purpose will be served by fastening securely to the wall, in a horizontal position, a number of strips of wood about four inches wide and three-quarters of an inch thick, and at distances apart of two inches *less* than the height of the cages (measuring from the inside edge). On to these strips of wood place good strong screws to hang the cages on. Allow intervals of about one inch between the cages. To each cage affix a good strong "eye" (what is known as a "slotted" brass picture plate is about the best) large enough to go over the screw heads above-mentioned. (It may be necessary, in the case of long flight cages to use two screws and two "eyes.")

Completing One's Outfit.

The cages can then be hung up on to the screws, and the same result will be obtained as if a rack were being used. There will be a space of one inch between each cage, and a space of two inches between each row. I have endeavoured to show more clearly the effect of the above in the accompanying illustration.

Several other things are required to complete the fancier's outfit, with which I will deal briefly. A rake for raking out the rubbish from the bottoms of the cages (or failing this a flat piece of good will answer very well); a scraper with which to clean the sand trays (I use a flat piece of steel about three inches by two inches, procurable from any ironmongers for about 2d.); dust pan and brush, a hair or fibre broom, and some sort of a receptacle for holding the rubbish, etc., cleared out from the cage—these are articles which can hardly be dispensed with. For the last-mentioned purpose I use what is known in Sussex as a "trug basket."

(To be continued.)

How to Treat and Teach a Talking Parrot.

By J. SPARKS (St. Helens).

Of the immense number of species of Parrots and Cockatoos, a few are endowed with wonderful intelligence. Of these, the African Grey Parrot is the king. Next comes the gorgeous Amazon Parrot, and then there is the quaint Rose-coloured Cockatoo, and the graceful Indian Green Parrot.

Africans and Amazons.

While the African Grey Parrot is universally acknowledged to be the most docile and the readiest talker, in colour it is very plain. I think we can find a parallel in some of the birds of our own isle, which, though the finest songsters in the world, yet are very shabby in dress compared with some of the foreign birds. Plainest of all, we have the Nightingale, which has thrilled thousands who have listened to its marvellous song. The body feathers of this Parrot are grey, the face and the place round the eyes are bare of feathers and white; the beak is curved and powerful, and is jet black; and the short tail is a bright red. The brightness of the tail is not very noticeable because of its shortness. As the bird's name implies it is a native of the jungles of Africa.

The Amazon Parrot comes from South America, and is really beautiful in colour. If it is to learn to talk it must be obtained when young. The Rose-coloured Cockatoo makes an interesting pet, but there is an uncertainty about its talking. Some learn to talk and some don't. Their utterances are usually confined to "Pretty Polly," etc. The same remark applies to the Indian Parrot. All depends on the individual. The Indian Parrot is very graceful, is rather small, and has a long, tapering tail. The body colour is a bright green; the beak is scarlet, and it has a mark on its neck, also scarlet.

If you want a talking Parrot, it is best to get a young Grey as soon as it arrives on our shores. At first it will be very wild, and make a lot of noise, but it is very sensible and soon sees the needlessness of it. At first cover its cage with a thick cloth, leaving a space to let in light for it to feed by. Don't forget that the climate of Africa is much warmer than that of England, and except in the hottest weather a Parrot should be kept in an artificially heated room, at least until it is thoroughly acclimatised. Feed on boiled white flat maize, which can be obtained from bird-dealers and seedsmen. In the afternoon give a drink of luke-warm milk. Don't give water during its first six months in England. (Two tins of the prepared corn are sufficient for one day).

Gaining Confidence.

When none of the members of the family are moving about, commence the training of the Parrot by pulling off the cloth. At first it will make a noise, but if everyone keeps quiet, it will be content to keep a strict watch on the movements of the humans. When no one is in the room but yourself, remove the cloth and take a seat close to the bird's cage, and read with your back to it. In a wonderfully short time it will become convinced of your harmlessness. Now leave the cage uncovered during the day, but on no account at night. Pass its cage frequently and always talk to it. It will learn to talk more quickly if you get it "finger-tame." This is easily managed. Get it to take maize corns out of your fingers. It may snap at you, but don't take your hand away suddenly. Don't hit it with anything, or it will only snap the worse.

Then try to scratch the back of its head with your fingers, saying to it "Come on, scratch Polly." Now, instead of giving its drink in one of its tins, hold an eggcupful of milk through the cage-door. When it comes to drink, cautiously scratch its head, and talk to it. Perhaps it will wipe its beak on your fingers. Keep still and don't withdraw your hand unless the bird actually bites.

In time it will play with your fingers in its beak without hurting you. When it does this, gradually bring your hand to its feet, and just touch its body. Very probably it will put one foot on your hand, and then the other. Then scratch its head. Practise this with it, and then, on a suitable occasion, let it out of its cage. Grey Parrots rarely attempt to fly, but close the doors and guard the approach to the fire-grate. When it has climbed on to the top of its cage, get it to step on to your hand and carry it about the room, talking to it, and rubbing the back of its head.

What is Wanted.

Play with the Parrot often, and it will learn all the better. When you come in say "Good morning," or "Hello" to it. When you are having meals, say "Polly wants some dinner," and then give it a piece of bread dipped in sugar. In time it will ask for it. What is wanted is not so much a long vocabulary of meaningless words, but sensible sentences uttered at the proper times. Don't forget the "White-eyed Kaffir's" advice in the Christmas number of CAGE BIRDS, i.e., "Don't teach them to swear or they will never forget it."

Parrots can also be taught to whistle. If you have a singing Thrush or Blackbird, "Polly" will soon get its song off when it has once started talking. They will learn to bark like a dog and mee-ow like a cat. Of course, the first word that they speak is very gruff and indistinct, and can hardly be recognised, but they soon begin to articulate clearly.

If your Parrot does not learn to talk when given this treatment, it will not learn by any other. Cruelty, hunger, etc., will not teach it. Some people will tell you that Parrots learn faster if covered up with a dark cloth and kept in a quiet place. It may be so, but most good talkers I know or have had, have not been so treated: they have simply been tamed by kindness, and then kept in a room in which they could hear plenty of conversation. Both sexes of Parrots will talk, and the hen is quite as good as a cock. The treatment of the other talking Parrots is the same as that recommended in the case of the Grey. If you don't want a screamer don't get an Indian Parrot.

I will conclude by briefly summarising the treatment. Feed on boiled white maize. At meal times give a piece of bread dipped in sugar. In the afternoon give a drink of lukewarm milk (for first six months, and afterwards lukewarm water). One or two drinks per day are quite sufficient. About once a week colour its drinking water with Parrish's Chemical Food. I have found that on this simple treatment Grey Parrots will become acclimatised and keep in splendid health, but as tit-bits they can with advantage be given nuts and fruit frequently.

The Crested Canary: Its Management Month by Month.

By A. F. FIFIELD (Oxford).

This is the Essay which was awarded FIRST PRIZE in "Cage Birds" Literary Competition in the Canary Section. Readers should note the announcement which appears on page 424 of this issue.

In this essay I will endeavour to give a general outline of the management of my favourite variety of Canary, viz., the Crested Canary. I do not claim to be an expert, but simply a working-man fancier, with limited time and income at my disposal. As this is a very expensive variety, and as I like to keep to quality as far as possible, I usually only put up about ten hens and five or six cocks (running one cock with two hens). Personally, I favour this system, as I find it has many advantages, and is more economical. I also put up two or three pairs of "feeders" in case of emergency.

The following are the contents of my bird room: One stack of fifteen single breeding cages, 20in. x 15in. x 11in.; and another stack comprising two flight cages 40in. x 20in. x 11in., and four single breeding cages, 20in. x 15in. x 11in. There is also an aviary 4ft. 6in. x 3ft. x 2ft. All the cages are made uniformly, all joints being well glued, so as to fill up any crevices that would harbour red mite. They are all enamelled inside, and fitted with punch-bar fronts with sliding doors. For perches I use 5-8in. dowels (which can be purchased at any ironmongery stores for 1d. each), which will make about six good perches. As these are cross-grained, you can scrape them without any splinters or cuts, by which the birds might injure their feet.

I also use red-mite traps at the end of the perches. I prefer the earthenware nest pans to any other, as they are so much cleaner. I use no artificial heat, as the birds seem so much hardier without it, but at the same time I take good care to avoid draughts, without interfering with ventilation.

The staple diet of my Canaries consists of three parts good Canary seed to one part of summer rape, with a little hemp seed added.

January.

I will now proceed to give a detailed outline month by month throughout the year.

With the advent of the New Year your thoughts turn to making a selection of your breeding stock for the forthcoming breeding season. I like to go into the bird room and sit quiet, and study the birds for a week or so, turning over in my mind their good and bad points, and picking out the best partners for each other. As I always run one cock with two hens, I pick out the cocks first, and then choose my hens to match them, trying, as far as possible, to have the Crested cocks birds that were bred from Crested hens, and the Crestbred cocks birds that were bred from Crested cocks; and the hens vice versa. About this time I clip the crests at the sides of any birds that I am not reserving for exhibition, so as to allow the birds to see to get about better. As blindness is so prevalent among Crests, it is advisable to take all precautions against it.

February.

During the month of February I always make it a rule to give the bird room a thorough good overhauling. One by one I scrub the cages out with carbolic soap and soda water, also the nest pans, egg-food drawers, etc. I now begin to feed up any of the birds that are at all backward, by giving a little egg-food twice a week, and so get them all about the same in condition; by this means I avoid any delay when the birds are paired up. Always use discretion in feeding up the birds, and try to adapt yourself to the climatic conditions prevailing.

March.

Most of the birds will now be showing signs of forwardness, calling to each other, and continually flapping their wings. But have patience, and do not pair up till at least the end of the month, and then only if the weather is favourable.

There is always a risk in pairing up too early, because should we get a cold snap the chances are you will lose some of your hens, either from egg-binding or inflammation; and you will find it difficult to purchase good hens at this time of the year. Before pairing the birds I take each one and cut off any superfluous feathers round the vent, so that these do not interfere with the breeding operations.

April.

If conditions are favourable, I pair up at once. I discontinue using sawdust on the bottoms of the cages, and substitute sand during the breeding season, as it is most essential to have plenty of grit for the hen to pick over to help form the shell of the eggs. Also I fix a piece of cuttlefish bone in the wires, as the lime in this is very beneficial.

When the birds have been paired up for about three days, and things are going on satisfactorily, I put the nest pan in. But when fixing the lining in, instead of sticking it in with paste, I always rub a layer of carbolic soap round the inside of the pan, and stick the lining to that, as this also acts as a disinfectant, and helps to keep the red-mite down that usually congregate under the lining.

If things go on alright you may expect the first egg in about a week or ten days. I always take the eggs away until the third one has been laid, and I substitute "dummies" in their places; then put them back on the evening of the day the third egg is laid. By doing this the young birds hatch out about the same time, and, consequently, stand a better chance of being fed equally. When I take the eggs away, I put them in a partitioned box, each compartment being numbered to correspond with the cage number. These I turn over at least once a day, so as to prevent the yolk from getting set.

When the hen has been sitting about a week I examine the eggs by holding them up to a strong light, to see if they are good. If they look thick or streaky they are good, but should they be clear, then they are unfertile and useless, and should be taken away from the hen.

May.

Your birds should now be in full swing, and probably some of the first round hatched. The evening before I expect the young to hatch I put a little egg-food in the cage, but I take care not to disturb the hen too soon, as some birds are very nervous at this time (especially first-year birds). If you do disturb a hen too soon you may cause her to forsake the nest. But instead of disturbing, just look on the bottom of the cage to see if there are any broken egg shells there. And, if you keep quiet, possibly you will hear the young ones squeaking. But should they not hatch out to date, I examine the eggs closely to see if there are any signs of the shell chipping, and if there is I put them back at once.

But, on the other hand, should there be no signs of chipping, I put them in warm water for a minute or so, and then place them back again for another day. Then if there is no result I take them away altogether, as the young are probably dead in the shell. I then let the hen have a rest for a day or two before putting the cock in to her again.

If the young hatch out alright, I give practically the yolk only for the first two days, adding bread crumbs each day till I get it to the strength of two parts bread crumbs to one part egg. When they are four days old I give a little green food twice a day.

As I prefer young lettuce leaves to anything else, I always sow some seed in boxes, and force it, so as to have it always fresh and at hand. I also give plenty of hemp seed in the hoppers, as some birds prefer this even to egg-food. Should any of the hens get a little lax in feeding, I try them with soaked rape seed, but if they are no better then I either put the cock back or place the young in the nests of some of the others, whichever is most convenient at the time.

You must now keep a sharp eye on the old birds, and see that they do not pluck the feathers out of the young ones with which to go to nest again. If this should happen, remove the youngsters immediately to a nursery cage (a Yorkshire show cage will do), and hang it to the breeding cage; then put the cock back with the hen, and they will feed them through the wires, until they can pick up for themselves.

TWO INDIAN FAVOURITES.

By FRANK FINN, B.A., F.Z.S, author of "Garden and Aviary Birds in India."

(See illustration on page 414 of this issue.)

THE RED-EARED BULBUL (*Otocompsa emeria*).—Next to the Pekin Robin, this pretty bird is the most abundantly imported of Eastern Softbills, though the supply is very irregular; it makes a good companion for the Pekin, being equally easy to keep, while the two birds set each other off splendidly, their colours and forms affording a pleasing contrast. Although this Bulbul, like most of its group, is not a brilliantly-coloured bird, its appearance is very pleasing, owing to its singular grace of form and movement; it is graceful both in flight and when perched, and only looks awkward on the ground, where its short legs give it a squatty appearance.

Indeed, I do not remember ever seeing it on the ground in Calcutta, though in the Andaman Islands, where it is about the commonest bird, it was often to be seen hopping about there—that is to say, in the civilised islands, for in one covered with virgin forest which I visited, I only saw these Bulbuls in the tree-tops.

Calcutta is the port from which these Bulbuls are shipped, and they are often known as "Calcutta Nightingales." The food usually given them there is "satoo," the coarse pea-meal which is now becoming well known, by name at any rate, to English fanciers, it being the staple for Softbills in India.

The colours of this Bulbul are very well expressed even in black and white, although the back and wings and sides of the breast, are brown, and there are patches of scarlet on each cheek and under the tail. The sexes are similar in colour, but the young are without the red cheek patches, and have the vent buff instead of red. The nest is open, placed in a tree or bush, and the eggs are pale pink spotted with red.

The Red-eared Bulbul is never, so far as I have seen, kept braced for fighting like the large dark Red-vented species, which is much the commoner in Calcutta.

THE WHITE-CAPPED REDSTART (*Chimarrhornis leucocephala*).—This pretty bird, which is, it seems to me, more of a Chat than a Redstart, having the shape and tail action of the Chat group, is quite the opposite of the Bulbul, which is its companion in the illustration. It inhabits the mountains, ranging even up to 20,000 feet in summer, thus living in a temperate or even cold climate, whereas the Bulbul is a bird of the low, hot country.

Also it is a solitary bird, living much on the ground by the sides of streams, and is one of the rarest and most treasured of fancier's favourites here, but very few having been imported. In India I have seen it in the Dehra Doon district at the foot of the Himalayas, where it frequented the sides of artificial water-courses; and a few were regularly brought down caged by the hillmen, who brought other Himalayan birds for sale.

The same treatment and food as suit our Wagtails would be appropriate for this species; a fine specimen was shown by Mr. S. M. Townsend at the last Palace show.

Both sexes are similarly clad, in black and deep mahogany red, contrasting with the white cap. The young are duller, the white cap being edged with black, and body feathers a mixture of dark brown and chestnut. The nest is placed in a rock crevice, and is open; the eggs are greyish-white with rusty markings.

Wild Bird Life.

Concerning Swallows.

Although the weather has been mild and springlike our Swallow population has not received any additional numbers. We have just the one or two, of which we occasionally get a glimpse. There are many more to come before we have our usual number. At the end of each summer we have quite a big gathering of old and young birds, but we never expect anything like so many to return to us in the following spring. Some years there appears to be a slight increase, in others they are sadly reduced. The mortality among them must be either while making the journey to their winter homes, or after their arrival there, for it is very seldom that they come to any harm in this country. During a life spent among birds wherever possible, I do not remember seeing more than at the most some half-a-dozen dead specimens, and each of these was either killed by accident or by wilful destruction. We are quite unable to calculate the longevity of many of our wild birds. Swallows should be among those that reach a good old age. Living constantly in the air, they have not the same enemies as perching birds, and their swiftness of wing should protect them from birds of prey. The Hawk may possibly catch one, as it were, by accident, in the same manner as I once knew one caught by a cat. The animal was turned out of the house, and at the same instant a Swallow flying low darted past the door; the cat struck at and, unfortunately, killed it. The Sparrow Hawk procures the most of his food by sweeping suddenly round corners of hayricks or over tall hedgerows; in this manner he may possibly pounce upon a Swallow. But I do not think he would deliberately chase one, even if he could get up the same speed, which is doubtful—he would be easily beaten by the twisting movements of the smaller bird.

While seeking shelter from a shower at the edge of a pine wood on April 16th, I became conscious of the notes of a strange bird, first softly, then louder, and after a little while quite overhead. At first it was difficult to get a glimpse of the performer; the light was dull and he was busy among the greenery of the tall firs. But I knew from past experience that the graceful Willow Warbler was not a shy species, and after a time he was within a few paces of me, peering among the leaves and occasionally singing his sweet little song, with now and again a glance at me. And although I was watching him closely (for he was the first I had seen) he showed not the slightest fear, but continued to sing and seek food with the most delightful tameness.

Small Clutches.

Some birds only produced a single egg at a sitting; yet, if this is removed another one is generally laid to take its place.

A Novelist's Pet.

The great novelist, Charles Dickens, was the proud owner of a fine Canary, which was taken such care of that it lived to the good old age of fifteen years.

An Early Breeder.

The Raven is one of our earliest birds to breed, its eggs being laid while thick snow covers the crags where it builds. There is apparently no reason for this early nesting as the young Ravens do not (like the Eagles) take an exceptionally long time to mature.

Where Rooks Build.

From observations in different parts of the country it appears that Rooks favour elm trees for building purposes, although many Rookeries are found in the branches of other trees. Two Rookeries known to the writer are in horse chestnuts, a very unusual occurrence, but somehow the elms appear to be the proper trees, and in no others do nests look more picturesque.

Birds that Spend a Long Day.

It is supposed that the Robin and the Hedge-sparrow spend a longer day than any other of our wild birds. Both these are very late in going to rest, and their little songs may be frequently heard some time after dark. In the very early morning they may be seen dimly flitting about before there is sufficient light for them to find food. So possibly there is some truth in the assertion.

Seeds, Foods & Wild Plants FOR Cage Birds

By Various Leading Authorities.

Price 1/2 post free.

A comprehensive and complete manual giving information on the various seeds suitable for all varieties of cage birds, their food values, uses, etc. Descriptions and illustrations of the various wild plants that are indispensable to the successful keeping of British and other birds are fully given. Postal Orders only to

CANARY BREEDERS

are invited to send to SPRATT'S for Free Sample Box of Foods and a Book on Cage Bird Rearing.

FINE FEATHERS MAKE FINE BIRDS
SPRATT'S
FOODS ENSURE BOTH
REGD DESIGN

With the advance of the fancy, the old-fashioned method of rearing on Egg and Bread-crumbs is gone, as well as the waste of time in preparing.

UP-TO-DATE BREEDERS NOW FEED

SPRATT'S
COD LIVER OIL
Cage Bird Food

which contains, in correct proportions, the necessary albuminoids, carbo-hydrates, fats and salts so essential to the building up of a strong and vigorous framework,

AND THE COST IS LESS. PRICES (Post paid): 12-oz. Tin, 9d. 3½-lb. Bag, 1/9; 7-lb. Bag, 3/2.

Here's Evidence!

Mr. J. JONES, writes:— 20/4/10.

I have given your Cod Liver Oil Food and Mixed Seeds a good trial, and find your Oil Food is a rare thing for plumage and health, and I don't think I could find a better diet for my birds.

Mr. J. DIMES, of Hanworth, writes:— 21/4/10.

This last two seasons I have used your Cod Liver Oil Cage Bird Food very extensively in breeding Canaries, and to that I attribute my success. In 1908 from 7 hens I reared 55, last year from the same hens 49 strong healthy youngsters, which I consider proof it is a Food to be relied on.

Spratt's RED COLOUR FOOD

PRODUCES A RICH AND DEEP COLOUR.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bona-fides* of either buyers or sellers In all transactions the adoption of our Deposit System should be insistedupon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit will be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—6d. for the first sixteen words. One Halfpenny per Word for each word over sixteen. MINIMUM, 16 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first Sixteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines 6d., 9d., 1-, 1/6 according to size.

Small prepaid advertisements of a general nature and not connected in any way with the Cage Bird Trade are inserted at the rate of ½d. per word throughout. Minimum 12 words 6d.

Advertisements must in all cases bear the bona fide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without designing any reason for so doing.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

APPLIANCES.

FOR sale, two Border show cages and case, 6 : Scott, Croft's Cottages, Cliffinside.

TRAVELLING case, 4 Norwich show cages, 10 6; offers: Collier, 138, Bolton-rd., Atherton.

FOR sale, three single breeders, new, good condition, 4/6; Pratt, Royal Standard Hotel, Long Sutton, Lincs.

MOSS, best hand picked, for nesting, 10d. lb., post free: G. Bugdale, Bawdeswell, East Dereham-rd., Norfolk.

PORTABLE bird houses from 25 -; outdoor aviaries from 15/-: Sussex Portable Building Co., Shoreham, Sussex. Catalogue.

ROUND door cutters, cuts circular doors from 1 to 8 inches, 1/3, post free: Allerton, Bordesley Green, Birmingham.

MAHOGANY Crystal Palace aviary (three-compartment), in good condition: F. Doncaster, Grocer, 109, Lancaster-rd., Enfield.

For all cage requisites, see list, free: Pimm, 229, Icknield Port-rd., Birmingham.

SUPERIOR ALUMINIUM RINGS

METHODICAL BREEDERS should not omit to mark their birds with these high-grade rings; they are the lightest, neatest and most reliable made, yet inexpensive. The rims are perfectly round and smooth, and the numbers cannot fill with dirt. These are the reasons why they have been used and recommended for years by leading fanciers. "Cage Birds" says: "One of the best samples we have seen." 150 for **4/-**, 100 for **2/9**, 75 for **2/3**, 50 for **1/6**, 25 for **10d.**, post free, carefully packed. Consecutively numbered with or without year. Supplied **with** or **without flanges.** Give them a trial this season, and test their superiority for yourself. **Breeding-room Registers, 7d.** each, post free.

GEO. B. LECLAIR, 24, Lambton-rd., Hornsey Rise, London.

JOHN A. REECE.

Established 35 years; awarded 28 medals and diplomas, for breeding, stock, show, flight, drawing-room, and parrot cages, wire fronts, pigeon and poultry pens, dog kennels, rabbit hutches, etc.; send for my wholesale list, post free: Jockey Wire Works, Colston-yard, Bristol.

COMPRESSED HAIR.

The most successful Nesting Material ever invented, is composed entirely of Cow Hair, is much superior to the ordinary nest bags—is more economical than any other material. Sample **1d.** post free; **6d.** and **1/-** Packets (Postage **1d.** and **2d.**) only from **T. C. CRAWHALL Pharmacist, 121, St. Georges Ter., Newcastle-on-Tyne**

Rings and Pedigree Books.

60,000 Sold Last Year.

Aluminium, round edges, embossed numbers, size of ring, with year on, or without, all made by myself, and not cheap, foreign rubbish; am maker to the Aberdeen University, supplying them by thousands for the smallest to the largest bird that migrates; being embossed, the numbers cannot fill with dirt, like all other makes of rings, which are sunk. "Cage Birds" says they are beautifully neat, small, and light, and easy to use; in fact, difficult to imagine anything better in marking rings. **No closed rings made: 6d.** doz., **2/6** half gross; stamp for samples. Pedigree Books **6d.** each.

SAM DRAKE, 31, Haley Hill, HALIFAX.

PUNCH-BAR CAGE FRONTS.

REMEMBER I INVITE

YOU TO PAY A VISIT TO MY ROOMS ON ANY DAY BUT SUNDAY.

You will be always assured of a hearty Yorkshire welcome, and will not be asked to buy anything. Cars run at frequent intervals past my doors, from Halifax, and also from Bradford (via Queensbury).

I have thousands of high-class specimens in stock, in every variety of Canary or Mule. My rooms are all scrupulously clean and well ventilated, and the birds in the pink of health and condition. I use no artificial heat of any kind. I am always pleased to welcome fanciers from any quarter, who can prove for themselves that my Advertisements are absolutely true in every detail. If you cannot come, however, and are in need of any variety of Canary or Mule, or any requisites for the bird-room, don't forget to send a Post Card for my FREE illustrated catalogue and advice to breeders FREE.

EVERY FANCIER, whether able to come or not, receives the same honourable treatment and the same personal

ATTENTION. I Submit a few Testimonials out of Hundreds Recently Received. Kindly note dates.

A WORKING MAN'S FRIEND.

Tin Street, Leadgate, April 25th, 1910. —" I thank you very much for the way you have treated me. I think you are a working man's friend. I have told a few of my fellow workmen the way you have behaved to me.—WILSON HETHERINGTON to JOE THOMAS.

77, Elmar Road, London, N., 24th April, 1910.—" The birds arrived quite safe on Thursday. I have not written before as I wanted to see them shape up before I said anything, and now I have to thank you for such good birds. I can honestly say that they are quite as good as others I have in the room which cost much more. I have had birds from two other dealers, but can truly say that they do not match yours. I shall be writing again shortly for more.—W. J. JORDEN to J. THOMAS."

127, Common Loch, Auchinleck, April 29th, 1910.—" Received the bird safely. It is the very thing I wanted. I could not have got better if I had been in your rooms."—DANIEL RICHMOND to JOE THOMAS.

Connors Lane, Tralee, April 25th, 1910.—" Received the bird all right. I am delighted with him; he is a splendid bird. He is just the one I liked. I will give you another order next week."—JOHN MORIARTY to JOE THOMAS.

344, Uxbridge Road, Shepherd's Bush, April 28th, 1910.—"Received bird yesterday quite safe, quite satisfactory."—J. H. CLARKE to JOE THOMAS.

Considerations of space only, prevent me from printing scores similar to above, all recently received.

Let me send you one or more on approval at my risk at any of the following prices:—

YORKSHIRES.—Champion stock or exhibition birds, guaranteed bred from the finest strains in the country; cocks, long, typical birds, 6/-, 7/6, 8/6, 10/6, 12/6, 15/-, 20/- upwards; hens, lengthy, racy birds, in beautiful feather, and ready for nesting, 4/-, 5/-, 6/-, 7/6, 8/6, 10/-, 12/6, 15/-, 20/- upwards; matched pairs, to breed own winners, 10/-, 12/6, 15/-, 20/-, 25/-, 30/-, 60/- upwards.

The great value I offer is contained in all following varieties; this fact is proved beyond all doubt. Hence your attention to following prices is respectfully solicited:—

NORWICH PLAINHEADS.

Cocks.—Clear Yellow, 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, 30/-, upwards. Clear Buff, 6/-, 6/6, 8/6, 10/6, 12/6, 15/-, 20/-, upwards. Marked, 5/6, 6/6, 7/6, 10/6, 12/6, 15/-, upwards. Hens—Clear Yellow, 3/6, 4/-, 4/6, 5/-, 7/6, 10/6, 15/-, 20/-, 30/-. Clear Buff, 3/3, 4/-, 5/-, 7/6, 10/-, 15/-, 20/-. Marked, 3/-, 4/-, 5/-, 7/6, 10/-, 15/-. Pairs Norwich Plainheads, Matched for Breeding, 7/6, 8/6, 9/6. Travelling Cages, 3d. extra.

CRESTS AND CRESTEDBREDS.

A Huge Collection.—Crested cocks, 7/6, 8/6, 10/6, 15/-, 20/-, upwards. Crested hens, 5/6, 7/6, 10/6, 15/-, 20/-, upwards. Crested-bred cocks, 6/6, 7/6, 8/6, 10/6, 15/-, 20/-, 30/-. Crested-bred hens, 4/6, 8/6, 10/6, 15/-, 20/-, 30/-, upwards. Pairs matched for Crest breeding, 12/6, 15/-, 20/-, 30/-, 40/-, 60/-, 80/-, upwards.

YORKSHIRES.

When I say Yorkshires, I mean it—not something with Feathers on merely, the breed of which would puzzle anyone to define.—Cocks, 6/6, 7/6, 8/6, 10/6, 15/-, 20/-, 30/-. Hens, 3/-, 3/6, 4/-, 4/6, 5/6, 7/6, 10/6, 15/-. Pairs matched for breeding, 8/6, 9/6, 10/6, 12/6, 15/-, 20/-, upwards. These birds possess length, type and quality, and have no equal elsewhere, at anything approaching similar prices.

SONGSTERS. PAR EXCELLENCE.

These cannot be Touched Elsewhere for quality and value. Sing anywhere. Great attraction. Very handsome, hardy, pure bred Yorkshires or Norwich, 6/6, 7/6, 8/6, 10/6. Thousands to select from.

These must not be confounded as just an ordinary singing Canary; they are all specially and personally selected; birds that with ordinary care will **not break down in song**, but go **right through the season.**

SPECIAL AMATEUR PAIRS.

My special matched pairs of prize-bred Norwich Plainheads at 10/6, 12/6, 15/-, and 20/-. Crested ditto, 15/-, 20/-, 25/-, and 30/-. Yorkshires, 10/6, 12/6, 15/-, and 20/-. Lancashires, 25/-, 30/-, 40/-. Cinnamons, 12/6, 15/-, 20/-. Lizards, 8/6, 10/6, 12/6, 15/-, 20/-. Border Fancies, 8/6, 10/6, 12/6.

THE NOVICE PAIRS.

If you cannot afford a big price, send for a pair of my correctly matched Norwich or Yorkshires at 8/6 or 9/6; and now note this.—In most cases where you send for pairs at this price, you are sent two buffs, often both marked birds—this is where you do not get what is required—well, I send you **one marked** and **one clear, one buff**, and **the other yellow.** Then for 3/6 I will send you a Double Breeding Cage, fitted with everything complete, for an immediate start. Total for Birds and Cage, 12/3 for 8/6 birds, or 13/3 for 9/6 birds. But I would strongly recommend you to have my Cage No. 100; it has sand drawers, and is fitted with sanitary furniture throughout, and the price is only 5/- **(Five Shillings).**

MULING HENS. FOR LIGHT OR DARK MULING.

Grand Sib hens, mostly clear buff, and of pink-eyed strain, 4/- and 5/- each. A few yellows, same strain, 6/6, 7/6. No dark blood in them. Light Mule breeding, 3/6; Dark, 3/-, 4/-.

Also

MULES.

Light Exhibition Mules, also Hybrids for Summer Shows, or moulting up for early autumn shows, cheap and good, a really grand collection; large quantity of singing Goldfinch Mules, all on approval.

Travelling cages in all cases 3d. extra, on all above prices.

W. RUDD, THE Bird Specialist, NORWICH.

BOOKLET FREE.

Finest Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all time to send my Parrots on four week's trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among Grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will he proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all Parrot buyers. Full details of our original system of selling Parrots on four weeks' trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard. Telephone No. 40 Morecambe.

Arrival of Australian Birds.

AUSTRALIAN SHELL PARROTS or BUDGERIGARS.

I beg to report as follows: The ss "Schwaben" arrived in Antwerp last week, with 4,000 pairs Budgerigars and Zebras, the whole of which were consigned to a German dealer, none reaching Great Britain.

The so-called manager was two days late to meet that steamer, and about five days too late to see Mr. Le Bon's stock; this, however, is nothing unusual. I have already informed the public that I received from Mr. Foglia some 3,000 odd birds, the actual cost being one hundred pounds lump sum, 1,376 were sold last week for £91 3s. 6d., leaving some 1,624 birds at a cost of only £8 16s. 6d. It is such a pleasure to record a successful speculation, after the gigantic loss on one so well known.

PRICES ARE STILL THE SAME.

One pair for 4/-, including package.
Six pairs for 18/-, including package.
Twelve pairs for 33/-, including package.
Fifty pairs for 125/-, including package.
Twelve cocks for 18/-, including package.

NOTICE.

Amongst such a large number there must he a few rough ones, which, if turned out in open aviaries, soon recover themselves; these we offer as follows: **Twelve for 12/6.** To avoid useless correspondence, **kindly** note—The birds will only he sold in above quantities and prices, and, despite any statements to the contrary, I am the only wholesale holder of imported Australian Budgerigars in Great Britain.

Early Application Requested.

GOULDIAN AND OTHER AUSTRALIAN FINCHES.

I arrived last week in time to purchase Mr. Le Bon's Gouldian and other mixed Finches. There are still two more consignments of Gouldians to arrive, particulars of which shall be duly recorded in these columns. I have left only

8 Hen Black Gouldians, at 5/6 each.
1 Hen Red Gouldian at 20/-.
20 Ruficauda Finches at 5/6 each.
30 Long-tailed Finches, at 5/6 each.
10 Masked Finches, at 5/6 each.
7 Yellow-rumped Finches, at 7/6 each.

Kindly note, all my stock is kept without any artificial heat. Cleanliness, with fresh air treatment is thoroughly studied at **221, St. George's Street, London Docks.**

(Above stock offered subject to being unsold).

INDIAN STOCK ARRIVING.

Telephone 5489 Wall; Telegraphic Address: Oiseaux, London.

Improved "Secure" Husks

5/- dozen, smaller quantities 6d. each. All the bird fancying papers have advised their readers to employ my husks if they wish to succeed in breeding and rearing Budgerigars, and the reason is that they have stood the test of 19 years' experience, and their superior excellency over other kinds is proved beyond question, so don't be fooled by newcomers with fairy tales and worthless rubbish.
HARPER, Husk Importer, Wolverhampton.

C. A. LUER

Club Reports.

GREEN CANARY ASSOCIATION.

Monthly meeting held at Oldham Hall, Oldham Street, Liverpool, on April 28th, Mr. J. W. Metcalfe in the chair. Messrs. H. Amos and W. G. Smith were elected members, and nominations were received from Messrs. G. James, W. Hughes, and C. Rumsby. A discussion then took place re taking the Green Borders into the Club, and the meeting decided that the May meeting should be an extraordinary one, summoned for the purpose of deciding whether the Green Border should be accepted. Members are requested to attend on May 26th, when the question will be finally settled.—GEO. GREEN, Sec.

GRIMSBY AND DISTRICT O.S.

Monthly meeting held April 28th, Mr. H. Booth in the chair. After much discussion it was decided to resign membership of the Cage Bird Union, the chief reason given being the rule which bars society members from competing at unaffiliated shows. The question of throwing open the society to all fanciers, without a radius limit, was again brought up, with the result that it will now be open to accept new members from any quarter. Respecting the annual open show, this was again under discussion, but it was left over until the next monthly meeting on account of the financial aspect of affairs. Two new members were elected. At the next monthly meeting the society will hold its first nest feather show of the season. Mr. W. Clews (Grimsby) will judge. Specials are offered for competition for both Canaries and British birds.—MOORE AND HARDING, Secs.

YORKSHIRE C.S. OF IRELAND.

Council meeting held at the Douglas Hotel on April 27th, Mr. J. R. Fry presiding. The following were present:—Messrs. Rooney, Holley, Birse, Stewart, Sheridan, Callaghan, Lynch, McDonald, and the hon. sec. With regard to the young bird show, the Council decided to give a silver cup for the best young bird in show. Mr. Stitt was co-opted a member of the Council. Mr. J. R. Hyland's name was brought forward for membership, when the following resolution was proposed, seconded, and carried:—"That the attention of the Council having been drawn to the allegation contained in the letter from Mr. Hyland, hon. sec. pro. tem., of the Y.C.C. of I., which appears in the current issue of CAGE BIRDS, viz., that "Some members of this Council had last season performed jobs far worse than issuing worthless cheques, it is hereby resolved that Mr. Hyland be asked to furnish this Council with the names of the persons alluded to by him, the exact nature of the charge referred to, and any evidence he may possess." The following new members were elected: Messrs. P. H. Kenny, J. Bannon, J. J. Cloke (Dublin), and Mrs. W. S. Taylor (Portrush). It was also suggested that Mr. J. J. Cloke be written to and asked to give a lecture on Mule breeding.—D. CARROLL, Hon. Sec.

YORKSHIRE CANARY CLUB.

Annual general meeting, held on April 30th, at the Market Tavern, Godwin-street, Bradford, Mr. F. Armstrong presiding. The minutes of previous meetings were passed. The balance-sheet was adopted. The chairman then gave the result of the voting, which was as follows: President, Mr. D. Sunderland; vice-president, Mr. R. Halliday; committee (inside Yorkshire), Messrs. F. Hammond, W. H. Shackleton, J. Bailey, H. W. Battye, H. H. Towers, H. Hill, S. Dean, W. A. Cowgill, T. Ogden, and R. Sutcliffe; (outside Yorkshire), A. Hirst, J. W. Ramsden, W. G. Cuthbertson, A. Ambler, and T. C. Crawhall; secretary and treasurer, J. Greaves; Assistant secretary, W. Crabtree. Mr. Sunderland now took the chair. A hearty vote of thanks was accorded the retiring officers, also subscribers and donors of special prizes, to which Mr. Armstrong replied. The following were elected by the meeting: scrutineers, Messrs. T. Hammond and T. Ogden; auditors, Messrs. R. W. Alderson and T. Clegg; districts committee, Messrs. F. Armstrong, H. W. Walsh (Halifax), A. Livesey (Bingley), E. Radley (Skelmanthorpe), C. T. Parkes (Wakefield), A. Chew (Leeds), J. Sawley (Keighley), W. Brown (Harrogate), E. Clegg (Dewsbury), and W. Bearpark (Menston). New members: W. Knowles, B. Tate, G. Blackburn, T. W. Turton, T. Elsegood, S. S. Rigg, J. Thomas, W. Laycock, E. Clegg, E. J. Cundall, L. E. Casey, A. Whitley, and J. Naylor. It was unanimously decided that a junior novice competition be formed, all points gained by members in the Yorkshire Union novice classes (Yorkshire section) to count. In the outside Yorkshire members' medal competition the number of competitors required was reduced from five to three, to win the medals outright at each show; and where the club's patronage is given to shows making the minimum number of classes only, viz., six, classification to be clear yellow, ditto buff, ticked or unevenly marked yellow hen, ditto buff hen; and that the club do not give patronage to shows where the clear cock classes are amalgamated. The arrangements of all competitions to be left in the hands of the committee.—JOHN GREAVES, Hon. Sec.

CRESTED CANARY CLUB.

The following is the classification decided upon by the committee of the C.C.C., classification consisting of 14 classes:—No. 1, Buff cock, clear body, any colour Crest; 2, Buff Crested cock, A.O.V.; 3, Buff Crested hen; 4, Buff Crest-bred ck. or Foul Green; 5, Buff Crest-bred ck. Crest-bred hen; 11, Buff Crested (current year); 12, Buff Crest-bred (current year); 13, Yellow Crested (current year); 14, Yellow C.B. (current year). Classification consisting of eight classes: No. 1, Buff Crested cock; 2, Buff Crested hen; 3, Buff Crest-bred ck.; 4, Buff Crest-bred hen; 5, Yellow Crested (cock or hen); 6, Yellow Crest-bred (cock or hen); 7, Current year Crest; 8, Current year Crest-bred. Cinnamon Crests and Crest-breds *must compete* in the above classes. Societies are requested to take note that the support of the Crested Canary Club will only be accorded at nine selected shows. It is, of course, quite optional for societies to take the minimum classification consisting of the eight classes, or the maximum of fourteen classes. From the societies giving the maximum classification one will be selected by the committee of the C.C.C., at whose show the silver challenge bowls will be offered in addition to the other specials. This show will be known each year as the "Crested Canary Club Show." To avoid misunderstanding societies must provide the classification exactly as set forth herein. The same number of classes differing in any way will *not do*. The conditions of support are:—The C.C.C. will guarantee the payment of prize money in full (except in the two novice classes), providing societies elected to receive the club's support pay to the hon. treasurer an insurance fee of 2s. 6d. per class on the eight or fourteen classes which they decide to give. These conditions do not apply to novice or selling classes. Any society wishing to take its own risk may do so, and thus save the insurance fee. It must, however, be distinctly understood that all other conditions must be adhered to, and they must guarantee full payment of prize money. This guarantee must be given in writing to the hon. secretary of the C.C.C. within one month from the notification of having been allotted the C.C.C. support. Societies electing to pay the insurance fee must do so 14 clear days prior to the opening day of their show. All societies receiving C.C.C. support shall provide at their own risk not less than two classes for novices, viz., Crest and variety, and Crest-bred any variety. In these two classes, in the event of short entry, prize money may be given on a sliding scale, or on the general conditions laid down by the society holding the show, and in conformity with the conditions applying to the classes of the other varieties at such show. Prize money to be not less than 20s. per class for an entrance fee of 1s. 6d., and not less than 26s., for an entrance fee of 2s. C.C.C. specials can only be competed for by members of the C.C.C. Any society wishing to make application for the club's support must do so at once to Mr. J. S. Clarke, hon. sec. (Sunnyside, Prospect-road, Woodford, Essex).

COVENTRY O.S.

We had a most interesting meeting on April 20th, when papers were given by Messrs. Barratt, G. Peters, Waring, and T. Gilbert, on "How to Get Young Birds on Seed." Afterwards there was a general discussion on the same subject. We have had several new members this season, and are open to receive further nominations.—J. SHADLOCK, Sec.

PAISLEY AND DISTRICT O.A.

General meeting held at Mr. Adams', Kelly Street, James' Street, Mr. J. Allison presiding. The meeting was called to consider the advisability of changing date of show. After a lot of discussion, it was decided to hold our show this year on November 19th. Fanciers please note change of date. The following specialist judges have consented to act:—Messrs. W. Rodger (Colinton), J. A. Stewart (Glasgow), D. Kennedy (Paisley), and J. Carlaw (Falkirk).—J. KELLY, Sec.

MIDLAND COUNTIES YORKS. C.C.

Committe meeting held at the Crown Hotel, Birmingham, on April 28th. The Secretary announced that he hoped to despatch the points' specials to the winners in the course of a week or so. The general meeting will be held on May 12th, at headquarters, and the committee hope all members residing locally will make a special effort to be present. The secretary will be glad to see as many others as can make it convenient to attend, and to hear from others suggestions and nominations for president, chairman, and secretary, which will be placed before the meeting. The prospects for next season are very promising, and a number of new members are already in view.—A. PADDOCK, Hon. Sec. (pro. tem.).

NATIONAL BRITISH BIRD & M.C.

Committee meeting held at headquarters, the Feathers Hotel, Great Chapel Street, Westminster, April 28th. Present: Messrs. J. Robson (chairman), J. Dewhurst, T. R. Trower, C. T. Maxwell, A. C. Askew, F. Wyse, C. Tyson, Plumbridge, and Carr. Letters were read from Messrs. L. J. Arrighi and P. Walsh. Mr. T. R. Trower promised to open a discussion at the next meeting entitled, "British Bird Laws, and how they affect the bird keeper," and the following month a discussion on "Bird Foods" (chiefly insectivorous). Final arrangements were made for the annual outing, viz., the morning party to lunch at the Black Swan, Ockham; tea at the Railway Hotel, East Horsley. Messrs. Trower, Cook, Silver, Robson, Maxwell, Dewhurst, A. Tyson, C. Tyson, and Askew gave in their names for the morning party. A hearty vote of thanks to the chairman concluded the meeting.—PLUMBRIDGE and CARR, Secs.

YORKSHIRE C.C. OF IRELAND.

An extraordinary general meeting was held at 5, South Anne Street, Dublin, on April 25th, Mr. C. A. O'Reilly in the chair. The following members were present: Messrs. G. Bray, J. Dowling, D. Carroll, P. Mulcahy, W. Sholedice, P. McDonnell, and Hyland, hon. sec. The following resolution, after considerable discussion, was proposed, seconded, and passed unanimously:—"That the hon. treasurer, Mr. Duigenan, be suspended from membership of the Y.C.C. of Ireland till January 1st, 1912, under Rule 22, March 1906." It was also proposed, seconded, and passed, that a copy of the above resolution be sent to CAGE BIRDS for publication. The financial condition of the club was next discussed, and it was estimated that the club's debts amounted to about £6 9s. 9d. Fearing that anyone who is not well-informed might think that the present committee are responsible for incurring debts for above amount, it is well to state that £2 5s. at least of above amount is due since 1908 show. The members present unanimously agreed that the best manner to pay off the above debt was to open a subscription list, and appeal to the members generously to help to pay off the amount. A subscription list was then opened, and the members present liberally responded. The meeting then adjourned.—J. R. HYLAND.

CITY AND SUBURBAN A.C.B.

Meeting held on April 19th, Mr. A. C. Burn in the chair. An extremely interesting letter was read from Mr. and Mrs. Morrison describing their voyage to Australia. Messrs. J. W. Ayres, P. H. Harris, E. Clements, T. Abrams, and G. E. Weston were elected members. Messrs. C. F. Ayres and F. Bassett were nominated for membership. The balance-sheet of the pair show duly audited, showing an income of £12 9s., an expenditure of £11 19s. 9d., with a profit of 9s. 3d.; and the Finch show, showing an income of £11 5s. 4½d., an expenditure of £13 2s. 4½d., with a loss of £1 17s., was confirmed as read. For presenting a silver-plated cup for competition in the British bird section, Mr. A. J. Marley was enthusiastically thanked. A vote of sympathy was passed to Mr. A. W. Curtis upon his recent illness. A massive six-guinea two-handled Irish Loving Cup, presented by Mr. R. L. Crisp for the best Yorkshire Canary, bred the current year, was on view, the same eliciting many words of admiration and praise; and the popular donor, too, was the subject of a characteristically humorous speech by the worthy chairman. After the usual business, that well-known British bird fancier, Mr. C. Prior, opened a discussion on the merits and demerits of colour feeding, in which the following members took part: Messrs. Prance, Weller, Chard, Lathlieff, Marley, Wyse, Burn, Churchard, Bryant, Cottey, Botting, and several others. At the close the chairman proposed a vote of thanks to Mr. Prior, which was seconded by Mr. A. J. Marley, and supported by Mr. H. Churchard. Mr. Prior replied. A hearty vote of thanks to the chairman brought a most enjoyable evening to a close.—F. WYSE, Hon. Sec., *pro tem.*

SELSTON AND DISTRICT F.S

Meeting held April 23rd, when it was suggested that table shows commence in August, but the dates have not been fixed yet. It was suggested that the annual members' show to be held in November, but the date has not been fixed. It was also arranged for an annual subscription of 2s. 6d. to be paid on or before Sept. 30th. Next meeting to be held May 14th, at 7 p.m., to fix show dates.—F. MALTBY, Hon. Sec.

DERWENT VALLEY C.B.S.

Monthly meeting held at the Church Hall, Hamsterley, Mr. G. Barkas in the chair. A lot of business came up for discussion. Decided, to alter the date of our first feather show from July 2nd to June 25th. Mr. T. Dixon elected to judge, and that all entries be in on the Saturday previous to the show. The point question again came up for discussion, and it was carried that the Canaries and British be separated. We would like to see a few more members turn up; they may always be assured of a very pleasant evening.—J. LINDSAY.

BARNSLEY C.B.S.

Monthly meeting held at headquarters, Clarence Hotel, on April 30th, Mr. J. Eyre (president) in the chair. We had a good meeting, members turning up well. Another new member was made. After a discussion it was decided to hold our open show on November 12th. Will secretaries please note? Mr. A. Hirst (Accrington) was duly selected as judge. The nest feather show will be held either the last Saturday in June or the first in July; judge and particulars will be fixed upon at next meeting. The president thanked all for their kind attendance, and this brought the meeting to a close.—F. C. SIMS, Sec.

KING'S HEATH, MOSELEY AND DISTRICT F.S.

Adjourned meeting held at the Red Lion Hotel, King's Heath, on April 27th, Mr. E. T. Everton (the newly-elected president) in the chair. The new president is imbued with a keen interest in local affairs, and makes an ideal president. Mr. H. E. Patterson, who has so faithfully served the Society in the past three years as assistant-secretary, was elected financial secretary, combining that office with the treasureship, and Mr. H. Y. Cooper, Lindhurst, Alcester Road, King's Heath, (sec. during 1908-9) was again elected to that office. The rules were revised, table shows arranged, and the young stock show fixed to be held on October 8th.

CREWE AND DISTRICT O.S.

Monthly meeting held April 26th at Earl of Chester Hotel. The Chairman (Mr. F. E. Cooper), in opening the meeting, said how pleasing it was to the officials to see such a good number present, and he hoped every member would do his best to attend every meeting in view of the open show. A new member was enrolled, and the classification for nest feather show to be held June 18th was gone into and settled. It was proposed that owing to the pressure of business the society hold its meetings fortnightly; this was carried. Then came the tit-bit of the evening—a paper on the Border Fancy Canary, from the pen of Mr. F. Wardleworth, (Newton Heath), which was read by Mr. T. Hancock. This proved of great interest, and a large number of questions were asked. A very happy evening was brought to a close with a vote of thanks to all who had contributed to the evening's pleasure.—J. C. HEATON, Assist.-Sec.

WIMBLEDON C.B.S.

It was quite a record number, both of ladies and gentlemen, who turned up at the meeting held at Mr. Johnstou's Rooms in the Broadway on May 2nd. About midway through the evening, when the routine business had been transacted, the Chairman (Mr. W. H. Stoakley) said he had the pleasant duty to perform of presenting Mr. J. Robson, who was present to give a lecture on "The Pleasures of Canary Breeding," a handsome silver-plated tea and coffee set, subscribed for by the members, in recognition of his frequent and valuable services to the society. The tray of the service was inscribed, "Presented to John Robson, Esq., by the Wimbledon and District Cage Bird Society, in recognition of his valuable services. May 2nd, 1910." Mr. Robson, who was greatly overcome, in returning thanks said the Wimbledon Society had given him the greatest surprise in the whole of his career. He could only say he appreciated their very kind gift to the full, and should look upon it and cherish it as a very dear gift indeed, as it had always been a source of pleasure to him to be of assistance to the Wimbledon Society. Mr. Robson then proceeded to give his lecture. At the conclusion a long series of interesting questions were asked, which the lecturer satisfactorily answered, and on the motion of the Chairman, a hearty vote of thanks was accorded by acclamation to Mr. Robson for his most interesting and instructive lecture. Three new members were elected, and there were two nominations for membership. It was decided to adopt in future the Curtis system of counting points in judging competitions, and Mr. Curtis, who was present, very kindly explained it. It was also decided, on the recommendation of the committee, that the society should resign its membership of the Cage Bird Union.—H. SMITH, Hon. Sec.

OPEN NORWICH P.C.

Committee meeting, held on April 30th, Mr. J. Wilcock in the chair. Decided, that the election of vice-president be left over till next meeting. Re addition to Rule 15, as passed at general meeting, decided, that in order to avoid calling a general meeting, the following be submitted to all members to receive their vote: "That this committee recommends that the additions to Rule 15," i.e., "That no society receive the O.N.P.C. patronage who award less than four money prizes, equivalent to 22s. per class," be rescinded, and that the members leave it in the hands of the committee to do the best in allotting patronage, as they find that this rule is severely interfering with the interests of the O.N.P.C. Decided that patronage be given to ten shows, season 1910-1911. Recommended that the O.N.P.C. provide a competition for the novice members of the O.N.P.C., who are eligible to compete in the Yorkshire Union "Novice" Norwich Section, and that the value of prizes allotted to such competition be 15 per cent. of the total subscriptions received from the Union Novice members. Date of closing applications for patronages is June 30th, 1910. The question of members' arrears was decided to be left over till next meeting, and that some arrangements be arrived at to work in conjunction with the other specialist clubs, in reference to suspensions, etc. The following members were proposed and accepted:—Messrs. Blakey (Gt. Horton), J. Naylor (Brighouse), J. Chambers, D. McMillan, jun., W. Johnson (Leeds), J. Horsfield (Bradford), J. Webster (Rotherham), J. Williams (Hartlepool), W. Plowright (Bradford), Mrs. Scargill (Monk Beeston, Barnsley). Two resignations were accepted with regret. The secretary was instructed to write to railway company re Mr. Wilcock's claim. The following members (who tied for last place on committee) were all elected: Messrs. Chittenden and Cowgill (Bradford), Jeffreys (Sowerby Bridge), Moorhouse (Meltham, near Huddersfield). All members' subscriptions are now due. I shall be pleased to forward all particulars to all intending members.—O. MITCHELL, Hon. Sec.

MIDLAND ROLLER C.C.

Usual monthly meeting held at headquarters, the Swan and Peacock, Wolverhampton, April 28th. Mr. Harper gave before a fair muster of members a very interesting paper on his method of Roller breeding. Everyone present was very interested, and a keen discussion followed, in which some 10 or 12 members took part. Some supported Mr. Harper in his method—that of one cock to three or four hens in large flights—others, of course, differing by using one cock to two hens in breeding cages. Mr. Harper gave his method down to the minutest detail, even to the appliances he uses, samples of which he brought to the meeting for inspection. All were his own make and most ingenious. A hearty vote of thanks to Mr. Harper brought to a close a meeting which had been most instructive to all present.—J. B. WILLOWS, Hon. Sec.

NORTH MANCHESTER C.B.S.

Meeting held April 12th, Mr. W. Robinson in the chair. Mr. T. Harrison, the well-known Altrincham fancier, gave a lecture on seeds on other foods before a fair number of fanciers and friends. The lecturer dealt with the various seeds and their values as diets for our pets. He gave quite a large number of the secrets of the Fancy away. The lecturer told how he fed four hens from the nest up to the breeding season. No. 1 he fed on canary seed; No. 2 on rape; No. 3 on hemp; No. 4 on linga. Afterwards he killed the hens to ascertain what condition they were in. No. 1 was very fat, but the eggery had very little slime in; No. 2 was worse; No. 3 was nearly dry; and No. 4, fed on linga, was thin in flesh, but the eggery was full of slime, and the bird could not possibly have been egg-bound. Messrs. J. Robinson, W. Robinson, Jones, and Kenyon asked questions, which Mr. Harrison answered to their satisfaction. Mr. Kenyon then proposed, and Mr. Pike seconded, that the best thanks be given to the lecturer, which was carried. The society are holding their nest feather show on June 25th next; judge, Mr. W. A. Cowgill. Annual show November 13th; judge, Mr. A. Wellings. Mr. Hampshire, the well-known Lizard fancier, was proposed as a member.—JOHN DAVEY, Hon. Sec. (We note that November 13th falls on a Sunday; possibly November 12th is meant.—Ed.)

SUNDERLAND C.B.A.

Usual meeting held on April 30th in the Fawcett-street Cafe. There was a good attendance, presided over by Mr. J. Farnar. The usual correspondence was read. Mr. S. Storey, M.P., wrote accepting the presidency of the association, this giving the members great satisfaction. It was decided that the table shows for young birds be held monthly, viz., June, July, August, the first one being held on June 11th. It was also decided that a different judge be elected for each show, and the judges elected were Mr. R. H. Dixon (Houghton-le-Spring), Mr. J. Clark (Sunderland), and Mr. Matt. Dixon (Houghton-le-Spring). 1st, 2nd, and 3rd birds will not be allowed to compete at the remaining shows. Moved and carried that the entrance fee be 3d. per cage. Moved and carried that the entrance fees over the three shows be pooled and awarded to winner of most points in each variety; thus, the total entrance fees in the Norwich classes over the three shows will be awarded to the winner of most points in Norwich classes over the three shows, and the whole of the entrance money in the Yorkshire classes will go to the winner of most points in Yorkshire classes over the three shows, and so on with the other varieties. It was unanimously decided that the Northern Lizard Club could have the use of our meeting room for the purpose of holding their meetings. One new member was made, and I would be very pleased to hear from anyone else who would like to join us.—W. REID, Hon. Sec.

The Shows.

ALNWICK AND DISTRICT C.B.S.

The second table show of the season came off successfully at Mrs. Kemp's Temperance Hotel on April 26th. Sixty birds came under notice of the judge, Mr. T. Dixon (Alnwick Moor), who received assistance from Mr. H. Gair (Broomhill). Mr. W. A. Broadley, hon. sec., and Mr. J. Rogerson gave valuable service in arranging for this display.

GOLDFINCH, ETC.: 1, vhc, Staig; Bullfinches; 2, 3, c, R. and J. Forster. Goldfinches; hc, A. Tweedy, Bullfinch. LINNET: 1, Broadley; 2, 3, R. and J. Forster; vhc, Tweedy. GREENFINCH, ETC.: 1, sp, 2, vhc, Staig; 3, hc, R. and J. Forster; c, Tweedy. REDPOLL, ETC.: 1, Stranghan, Redpoll; 2, Tate, Redpoll; 3, Staig. A.O.S.: 1, 3, R. and J. Forster, Yellowbuntings; 2, Staig, Reedbunting. A.O.S. HEN: 1, 3, vhc, R. and J. Forster; 2, Rogerson, Linnet. HYB. AND MULE PAIRS: 1, 2, R. and J. Forster; 3, vhc, hc, Staig. CAN. PAIRS: 1, sp, Green, Norwich; 2, Miller, Border Fancies; 3, Green, Yorks.; vhc, Staig, Norwich; hc, Broadley, Yorks.; c, Broadley, Border Fanciers.—W. A. BROADLEY, Hon. Sec.

GLASGOW AND WESTERN COUNTIES N.M.B. AND F.B.C.

Usual monthly meeting held in the hall, 122, Ingram-st., on April 30, Mr. Thompson presiding over a good attendance. Mr. Pettigrew reported the death of Mr. H. Brown, and said he had got a subscription sale up on behalf of the wife and family. It is hoped the Fancy will make a liberal response. The classes were settled for our next meeting as follows: Chaffinch, Bramblefinch, and Bullfinch. Our monthly show was then gone on with, the awards of the judges appointed, viz., Messrs. G. Marlin, and J. Reid, being well received.

SISKIN (9): 1, Munro, one of the best seen out this season, a topper; 2, Connelly, nice one, good cap and grand bloom; 3, Pettigrew, fine one; 4, Renfrew; 5, Knox; 6, Drysdale. MEALY REDPOLL, ETC. (10): 1, 3, Malcolmson, 1st noted Mealy, one of the best, needs no comment, 3rd rattling good Twite, in field plumage; 2, Small, grand sized Twite, rare good col.; 4, 5, Connelly, right good Mealy; 6, Pettigrew. REDPOLL LESSER (3): 1, Malcolmson, new face, in field plumage, rare bib, grand tanning, stormer; 2, Knox, another topper, must have been hard to separate; 3, 4, Thomson, another grand one; 5, Fulton; 6, Small; 7, Renfrew. Judging competition for Mr. Malcolmson's medal drew out a good entry, Mr. Connelly being the winner, pressed hard by Mr. Thomson. Mr. J. Adams gave a very interesting lecture on breeding.—T. DRYSDALE, Sec.

Singing Contests.

GLASSHOUGHTON.

Usual contest, held at Rock Inn, Glasshoughton, when 20 birds faced the judges. S. Scott was first 89 secs.; W. Dobson, second, 39 secs.; and J. Wainwright, 3rd, 37 secs.—R. Taylor, sec.

BOLDON COLLIERY.

Linnet contest held at Mr. Holt's Queen's Head on April 16th, when 22 birds faced the judge, Mr. Bailey. 1 and 2, Tracey; 3, Hall. Also on April 23rd, when 15 birds sang. 1, 2, 3, Tracey. Also on April 30th, when 21 birds sang. 1, Tracey; 2, Honey; 3, Brannon.—J. TRACEY, Sec.

WHITEHAVEN.

Linnet singing held at Low Road Inn, on April 30th, the landlord (Mr. T. Wilson) adding 5s. to an entrance fee of 1s. per bird. The entries numbered 28. Result: 1, 2, divided between T. Quirk and B. Graham; 3, 4, J. Stevens. Mr. O. Fee acted as judge and timekeeper, while Mr. H. Fitzsimmons looked after the books.—DALESMAN.

SHEFFIELD.

Royds Inn Linnet S.S. weekly singing contest held April 30th, when 16 birds sang. Bisby, 99 secs.; Driver, 72 secs.; Thompson, 70 secs.; Fenn, 53 secs.; Worrall, 52 secs.; Bisby, 46 secs.; Thompson, 40 secs. On May 1st, 15 birds sang. Palfreman, 112 secs.; Palfreman, 95 secs.; Spotswood, 76 secs.; Thompson, 56 secs.; Little Jack, 40 secs.; Spotswood, 34 secs. Also on May 1st, when six birds faced the judges. Williamson's famous Linnet took 1st prize, Bown's 2nd, Tunmey's 3rd. On May 8th there will be a variety show, staged at 8 o'clock. Mr. J. Dallamore will give £5 to a Linnet club, and also 10s. to a 1s. bird for Whitsuntide contest.—H. WOODCOCK, Sec.

BLACKBURN.

Week-end contest held as usual, the weather being all that could be desired. Ten birds were entered, and some very fair singing took place. Result: 1, Leeming; 2, 3, Topping. Judges, J. Monk and W. H. Topping; referee, G. James; timekeeper, F. Lucas. Members take notice that on May 14th, 1910 (Whit-Saturday) an all-England contest will take place at Old Red Lion, Snig Brook. Will Preston Linnet fanciers take note of this too, as we expect a good entry?—T. SLATER, Sec.

CASTLEFORD.

Usual weekly Linnet sing held at the Brittania Inn, Lock Lane, when 24 birds sang for three good prizes. Result: 1, Dobson; 2, Scott; 3, Longfield. We have a sing at the Navigation Inn, Lock Lane, on May 7th, hoping all members will put in an attendance.—WALTER DOBSON, Sec.

CLEATOR MOOR.

Linnet singing took place at the Royal on April 30th. The landlord (Mr. Burns) added 7s. 6d. to an entrance fee of 1s. per bird. There were 34 entries, and conditions were for the birds to sing five minutes ten yards apart on grass. Result: 1, Hardy (Whitehaven); 2, 3, Byrne; 4, 5, Kitchen and Hardy. Mr. Trainor, the veteran Linnet singer, was the judge, who gave every satisfaction.—DALESMAN.

LEEDS.

Usual quality contest held at King's Head, Shannon Street, on April 30th, when 26 birds were hung, including some from Lancashire and Sheffield. Judges, W. Naylor, J. Melia, and H. Hayes. Result: 1, Solman; 2, Sissons; 3, shared T. Stead and W. Bisby, of Sheffield. Also on May 1st, when a record entry of 40 birds sang for four good prizes, and were judged to perfection by T. Summers, W. Naylor and A. Jennings. 1, Solman; 2, Hardcastle; 3, Butler; 4, T. Stead.—WILSON NAYLOR, Hon. Sec.

WIGAN.

Open Linnet singing match held at the Blue Bell Inn, Scholes, April 30th. 36 birds sang for eight prizes for quality and time. We had birds from Wigan, Warrington, Blackburn, Leigh, Standish, Westhoughton, and Southport. Judges for quality, Messrs. F. Gibbons and W. Millingham; timekeeper, Messrs. E. Parker, R. Statham, and R. Lowe. Winners for quality: 1, Barnes; 2, Millingan; 3, Statham; 4, Jones. For time: 1, Mather, 175; 2, R. Statham, 149; 3, T. Statham, 134; 4, Ellinson, 124. After the match we spent a most enjoyable evening with songs.—A. PARKER, Sec.

NEWTOWN (Leeds)

Usual quality Linnet singing match, held at Plasterers' Arms, Skinner Lane, April 30th. 1, Bryan; 2, 3, shared, Butler and Green. Judges: J. Hargreaves and G. Towers. Some extraordinary good time singing was heard at the above house, May 1st, the fine weather accounting for 22 birds, all singing. The timekeepers, Messrs. Hargreaves Bros., satisfied all entrants, all four winners running very close. Five minutes hang: 1, Jarrow, 227 sec.; 2, Rennie, 223 secs.; Hargreaves, 195 secs.; Nobler, 193 secs. Quality matches held every Saturday, commence 3 o'clock. Time singing each week end.—JOE HARGREAVES, Hon. Sec.

Usual Linnet singing contest for quality, held at Prince Albert Hotel, Cambridge-street, on May 1st, when 15 birds sang for three good prizes. Result: 1st, Binns; 2nd, Wood; 3rd, Hayes. Judges, Messrs. J. Smith and Towers; timekeeper, W. Dean.—A. TURNER, Hon. Sec.

Canary Breeding for Beginners

By CLAUDE ST. JOHN.

Post Free 7d.

A practical, up-to-date guide to Canary Breeding, designed specially for the use of the beginner in the hobby.

Contains many helpful illustrations, and deals very fully, and in an easily-understandable manner, with the choice, sexing, and mating of the birds, feeding for condition, the cages and their fittings, the bird-room, egg-food, nest-building, rearing, and moulting the young, colour-feeding, training for show, etc.

All the details of bird-breeding explained, while it shows the way out of all difficulties likely to confront the breeder.

CAGE BIRDS, 153, Fleet St., London, E.C.

The Young Naturalist.

Prizes of 1s. and two of 6d. each will be given weekly for the best three anecdotes about birds written on postcards. Competitors must be under sixteen years of age, and state whence stories are taken. Two stars indicate the Winning Contribution; one star the runners up.

*A Loud Song Thrush.

My dad had a hand-reared Thrush which we kept in the house. He was a very tame bird, and he would partake of food from my hand. He was a loud singer, and he wakened us too early in the morning. My dad then resolved to take him to the shop. One day an old lady who admired his song asked my father if he would sell him. After a little thought he decided to sell him for a sovereign, and the old lady marched triumphantly out of the shop, carrying bird and cage, highly pleased with her bargain.—Sent by William Robertson (age 12), 21, Lawrence Street, Partick, Glasgow.

*The Wrong Parents.

One day last year I and two of my friends found visible signs of a Starling's nest under the eaves of an old barn. On looking on the ground directly under the nest we found three young Starlings, one alive, and the other two dead. We took the live one and put it in a Blackbird's nest, which also contained young ones. We visited the nest several times, and found the young Starling was prospering as well as its Blackbird mates, and must have been fed by the old birds. In time they all flew away, the Starling included.—Sent by W. S. Mills (age 15), Eversleigh, Millstone Lane, Nantwich.

**In Nature's Garden.

Last week we had a half-day's outing from Kilgerran School to study Nature. We started through a path in the dingle alongside of the river Teify. The first thing that drew our attention were the Waterhens. Our teacher asked could we name them, when my mate answered: "My grandmother keeps a lot of them; she calls them bantams." A little farther down we came to a stream, and there we saw some lovely Wagtails (pied and yellow). Teacher asked again could we name them. I replied quickly that my father kept a lot of them in a cage and called them Yorkshire Canaries. I said, too, that pied meant natural colour, and the yellow colour fed, and I am certain by the wagging of the tails of these birds, I said, that they are both suffering from asthma. Teacher laughed, and described the difference to us.—Sent by Frederick John James (aged 10), Cnwce, Kilgerran, Pembrokeshire.

"Our Canaries": Part 1 of the best book ever published about domesticated Canaries is now on sale. Post free, 6d.

JUDGES OF CAGE BIRDS

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

L. ADAMS, Eagle Aviaries, High Street, Folkestone. Judge all kinds Cage Birds, Rabbits, Cats, Cavies, etc.; life experience. Terms moderate.
J. C. BARNES, 149, Duncombe Street, Walkley, Sheffield. Judge of all varieties of cage birds. Long, practical experience. Terms moderate.
D. W. BRUCE, Coldstream. Judge of all varieties of cage birds; Border and British Bird specialist. Terms moderate.
W. A. COWGILL, 115, Washington Street, Girlington, Bradford. Judge of all varieties of cage birds. Over 25 years' practical experience. Terms moderate.

Secretaries desirous of "guaranteeing" a Show should apply for proper guarantee form to our Manager.

A reduction will be made for a Series of not less than Nine Weeks.

CAGE BIRDS, 154, FLEET STREET, LONDON.

PORTMADOC POULTRY, BIRD, & EGG SHOW, **MAY 14th.**
Entries close May 6th. Spratt's pen, etc., in the open. Birds under cover. HUMPHREYS, Sec.

ST. IVES, CORNWALL
ROYAL CORNWALL AGRICULTURAL ASSOCIATION. EXHIBITION, Wednesday and Thursday, 8th and 9th June, 1910, of Dogs, Poultry, Pigeons, Cage Birds, Rabbits, Cats, Cavies, Mice and Horticulture. Over £300 in Prizes, also a large number of Valuable Special Prizes. Entries close May 27th, 1910. Entry forms can be obtained of Hon. Sec. W. A. Sandrey, 4, Draycel Terrace, St. Ives.

I thank you for the sketch of my unflighted clear buff Norwich Plainhead hen which appeared in your spring number last week. It was a great surprise to me to see her there just lifelike, as I had no notion that she was to appear. I think she was the best buff hen I ever bred. She was a late-bred bird, being hatched on August 9th. I bred her from my well-known clear yellow cock bird, and a buff variegated hen, one of the best breeding, feeding, and stock-getting hens I have. She was shown seven times, and her placings were: 5th Glasgow and West of Scotland, judge Mr. Calderwood; 2nd Earlston, Mr. Walter Bell; 1st Berwick, Mr. Hay; 1st and cup Galashiels, Mr. Mason; 1st Jedburgh, Mr. McKenzie; 1st Scottish National, Mr. Booth. For her purchaser Mr. Mabon (Kelso) after Edinburgh she won 1st Coldstream, Mr. W. Bell. This is a good performance for such a late-bred bird, the first season.—A. G. CAMERON (Kelso).

Twitterings.

The next open show of the Bodmin Society, writes Mr. A. E. Jago, the secretary, will be held on November 16th.

We have decided to resign from the Cage Bird Union, writes Mr. H. Smith, hon. secretary, Wimbledon and Dis. C.B.S.

Our second annual show has been fixed for November 10th, writes Mr. Albert E. Pilbeam, hon. secretary of the Luton and S. Beds F.S.

Mr. T. Harrison (Altrincham) has been engaged to judge Crewe and Dis. O.S. Nest feather show, to be held on June 18th, writes Mr. J. C. Heator, the assistant secretary.

Will members of the Greenwich and Dartford C.B.S. make a special effort to attend the next general meeting at headquarters, on May 12th, at 8 o'clock sharp? writes Mr. E. Meades, the chairman.

Kindly note we have appointed Messrs. H. W. Battye and A. Wellings as judges for our annual open show to be held at Caxton Hall, Salford, on November 18th and 19th next, writes Mr. H. Clayton, hon. secretary of the Pendleton and Salford O.S.

Those requiring Sandiford's new colour feeds send for new samples and prices. Hottest colour in the world last season. Mr. J. Davies, winner of the N.P.C. challenge cup last season, had the hottest birds alive, and he used only our Royal Red.—(ADVT.)

Mr. B. Dewson (54, St. James Street, Ashted, Birmingham) writes that he would be glad if any reader can tell him where he can buy "Avista," a paint which dries with a hard, glossy surface, as he is unable to obtain it locally.

I have taken over the secretary's work of the cage bird section of the Reigate Fanciers' Association, and hope to have the help of all its members, writes Mr. A. W. Bacon, 14, Charman Road, Redhill, Surrey. Any communications for cage bird section should therefore be sent to me.

The 1909 balance-sheet of the Luton and South Beds Fanciers' Society shows a balance in bank and in the treasurer's hands of £5 5s. 7d., which, in view of the fact that the society is only twelve months old, is highly creditable to the hon. secretary, Mr. Albert E. Pilbeam, and his fellow-officers.

We have received from Mr. Fred Hammond, the secretary, the balance-sheet of CAGE BIRDS competition, 1909-10, for the amateurs of Yorkshire. This has been duly examined and certified as correct by Mr. D. Sunderland. Our best thanks are tendered to all the officials concerned for the able manner in which this competition has been managed.

As showing the extent of the business controlled by that noted bird specialist, Mr. W. Rudd, of Norwich, we learn that during the four months of this year (1910) he has sent away no fewer than 4,804 consignments, while for the last five years the consignments despatched by him have reached the astonishing number of 85,939! Eloquent figures, these.

Two First Feather shows have been arranged to be held by the City of Bradford O.S., one on June 18th (with Mr. A. W. Hartley as judge), and the other on July 23rd (with Mr. P. Mason as judge). A leaflet giving the classification and other particulars of these and other members' shows, all of which will be held at the Flying Dutchman Hotel, Leeds Road, may be had of the secretary, Mr. F. Rhodes, 112, Fitzroy Road, Bradford Moor.

All the Green Canary Association challenge cups having been won outright last year, it is intended to again provide same if possible. The G.C.A. are not in a position to provide them all, so Messrs. Deacon and Metcalfe were asked to get up a subscription list. All fanciers who are interested in the Norwich Green will they send their donations to V. H. Deacon, 21d, Arcade, Exchange Station, and those interested in the Yorkshire Green to J. W. Metcalfe, Reservoir Hotel, 35, Whitefield Road, Liverpool?—DEACON AND METCALFE.

The report and balance-sheet for the year ended February 28th, 1910, of Messrs. Spillers and Bakers, Ltd., the well-known manufacturers of cage-bird, poultry, and other foods, are in every sense satisfactory. The ordinary shareholders receive a dividend of 10 per cent., and in addition 8s. per share bonus, or 4 per cent. per annum. Ten thousand pounds is transferred to the reserve fund (which now stands at £140,000), and the Staff Benefit Fund receives £3,000. And after all other deductions there is a carry-forward of £131,819. The directors are to be congratulated, not only on the financial result of the year's working, but also upon their discrimination in the allocation of the profits. Next year it looks as though the ordinary shareholders may expect even a more favourable result.

I am appointed to judge Huthwaite First Feather show on June 18th, writes Mr. J. Bertie (Mapperley).

Ramsden's specials. Will secretaries and exhibitors kindly note that last season's arrangement will be repeated this season? Members of societies, when ordering Ramsden's pure peppers, should mention the society they wish the order credited to.—(ADVT.)

Kindly note that I have left St. Budeaux, writes Mr. Albert E. Cheney, and that my present address is 5, Chapel Street, Devonport. I have been delighted to note what rapid headway CAGE BIRDS has made, and I heartily wish the journal continued success.

I was agreeably surprised on opening my CAGE BIRDS of April 30th issue, to see the portrait of my light Linnet Mule appearing in your delightful art supplement. I thank your artist, Mr. Norman, for the trouble he must have taken, as he has got him "to a feather." I may say the bird has won under most of our present-day judges, and with ordinary luck I hope to bring him out better than ever for next show season.—J. A. LEES (Oxford).

At the close of last season, writes Mr. A. Parke (Lowestoft), I wrote you about the serious loss Mr. Lay of this town had had with his birds. Since then numerous fanciers have kindly shown their sympathy by starting him again. Now I am sorry to say he has had another misfortune and lost the lot again. This is how it occurred: Owing to the nights being cold he thought it best to have a little heat, and so placed a small oil stove in his heating apparatus, leaving everything all right when he retired for the night. Just imagine his surprise the next morning when he found the cages and room full of soot and every bird suffocated. I feel sure that fanciers will be sorry to hear of this most unfortunate accident.

A Tall Story.

According to the "Western Chronicle," Mr. Harding, of Dunpole Farm, Ilminster, set a hen in the orthodox way, with nothing to denote the least peculiarity in any of the eggs, or the prospect of any unusual result. When the hatching-out process came to a climax, however, a young Owl was found to have been hatched with the chickens. At the time of writing the hen was bestowing her maternal affections on the quaint youngster equally with her regular offspring.

New Hounslow Society.

On May 2nd a meeting was held at the Council Hall, Hounslow, with the object of forming a fanciers' society. Mr. C. A. House had been invited by the promoters to take the chair, and, he having spoken as to the best methods to pursue and the prospects of a society being successfully run in the district, thirty-six names were given in, and it was decided to form the Hounslow and District Fanciers' Society. The radius was fixed at five miles, and the subscription at 5s. per annum. A committee of four was elected to draw up rules, and select officers and committee, to submit to a meeting at the Council Hall, Hounslow, on May 10th at 8 p.m. Mr. D. J. Rees, 73, Whitton Road, Hounslow, was elected hon. secretary (pro tem), and will be pleased to receive the names of intending members, or to give any information.

Our Essay Competition.

Owing to an unfortunate transposition of names an error crept into the account (given last week) of the result of the Canary section of our recent Canary Competition. The articles which ran the winning essay very closely (so much so that the judges found it difficult to separate them) were received from Messrs. W. M. Thomson (Moffat), W. C. Drew (Manchester)—these two were inadvertently published as competing in the British section—and A. Burtenshaw (Worthing). We regret the occurrence of this error in the copying out of the names from the judges' lists.

Silver Wedding at Rochdale.

Mr. J. Naden, the worthy president of the Rochdale O.C., to celebrate his silver wedding, gave a tea party and social to the members and their wives on April 30th, when about 40 persons sat down to a good spread, writes Mr. J. Butterworth, the secretary. Afterwards a good concert was held. Mr. T. Ashworth sang "Mona" and "My Pretty Jane." Our president sang "Rocked in the Cradle of the Deep" with Mr. R. McKim, which was highly appreciated. A phonograph selection was given by Mrs. Cowen. A pleasant evening was brought to a close with the singing of "Auld Lang Syne." The ladies presented Mr. and Mrs. Naden with a pair of splendid vases. Mrs. Naden replied, thanking them for the honour. Those who know Mr. Naden will join me in wishing him and his better half long life and prosperity.

The grand evening concert which has been arranged by Mr. H. Wallace Tomsett for the purpose of benefiting the funds of the Dulwich and Peckham C.B.S. is due to be held on Tuesday next, May 10th, when everything points to a most successful evening. An excellent array of talent has been engaged, the artistes including, amongst others, Professor Donn, M.I.M.C., the celebrated magician, from the principal halls. No effort has been spared to ensure the best possible results. The concert is to be held at the Reindeer Hotel, Rye Lane, Peckham, at 8.15 p.m., doors open at 7.45 o'clock. Admission is by ticket only. Further particulars may be had from Mr. H. W. Tomsett, 34, Endwell Road, Brockley, S.E. The room is eminently suitable for the purpose, writes Mr. Tomsett. The side entrance will be used, and the whole staircase and room thickly carpeted. Ladies are particularly invited. The hostelry is one that anyone can enter with perfect ease of mind and bring a lady to. Well-known gentlemen of the Fancy are expected to be present, and altogether a "high time" is anticipated.

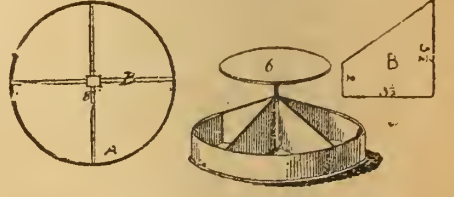
Illustrated Ideas

Every "Illustrated Idea" used will entitle the sender thereof to two shillings and sixpence.

No. 406.
Noiseless Wire Nest-pan Hangers.

Sent by Mr. T. Hawley, 6, Stedman Street, Birches Head, Hanley.

Here is an idea that I think will be very useful to other fanciers now the breeding season has commenced. It is for those who use earthenware nest-pans with wire hangers. I find there



Binding Nest-Pan Holders.

is a great difficulty in making the pan firm and noiseless in the hanger. The idea is to wrap string round the hanger, as illustrated. I find it is firmer than putting any round the pan as some fanciers do.—THOMAS HAWLEY.

No. 407.
Design for a Seed Hopper.

Sent by Mr. S. Moody, 6, Park Avenue Cemetery Road, Eastville, Bristol.

I have seen various designs for seed vessels in CAGE BIRDS from time to time; I am sending along one I made for my aviary, and find it answers all right. It is easily made and costs comparatively nil. Procure a piece of ¼in. wood and cut to a circle, say, 8 inches across.

An Aviary Seed Hopper.

Then have a piece of zinc or tin 2ft. long and 1½inches wide, and fix edge-wise on the circular base A. Hammer the top edge over so that it does not injure the birds, and nail round the edge of circular base A. Nail a piece of ¼in. square wood 5 inches long in centre. Then cut four pieces for divisions marked B, and nail to base and upright. Lastly, cut one circular piece 6 inches across to nail on top of upright; and the hopper is made.—STEPHEN MOODY.

CAGE BIRDS is the best birdy paper for birdy people, writes Mr. J. E. Seager (London, E.).

I am pleased to say that I have received valuable information from the columns of your wonderful paper many times.—ALFRED PEARSON (Altrincham).

I have taken CAGE BIRDS regularly for this last six years, and think that it has no equal for information and enlightenment. I always recommend it.—F. KING (Cambridge).

I must compliment you on your Spring Number and the coloured plate of Mr. Norman's. The picture is very true to life.—J. BONA (Otley).

What a splendid issue the Spring Number is! I am keeping all CAGE BIRDS' coloured plates, and intend having them framed for my birdroom.—ALICE MUNDAY (Axminster).

Your Double Number of CAGE BIRDS for April 30th is extraordinarily good. All our members are speaking very highly of it.—T. SLATER, secretary, National Quality Linnet Singing Association.

I was pleased, writes Mr. Wm. Adams, secretary of the Rochdale Good Intent C.B.S., to see that you had given our showroom with officials, judges, etc., so prominent a place in the grand Spring Number, as it is a credit to reproduce a photo in the manner you have done, everything being so lifelike. And I am sure that those of our members who have not got one of the original photographs will keep this reproduction, as it is almost impossible to beat it. It brings back to our memory the fact that the show almost came up to the great success of our last show, which was a record. I am only sorry that, owing to our not seeing eye to eye with the Cage Bird Union, principally on Rule 22, we have withdrawn from that body. So we will have to wait a little, as we have dropped the open show this season (unless something is done very early, as it may not be too late yet). As regards "The White Wagtail at Home," it is a treat to read even if you do not keep British birds. Allow me to thank you for the splendid number you have just published.

Order at once, Part I. of "Cage Bird Hybrids," 6d. post free.

The best, most complete, and up-to-date book on Mule and Hybrid breeding.

SHOW DATES FIXED.

To secure insertion in this column, a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.

* Under the rules of the C.B. Union.

England.

*Sept. 23 & 24.—**Lancaster Primrose.**—(J. H. Nayler, 6, Mary Street), W.M., S.M.,

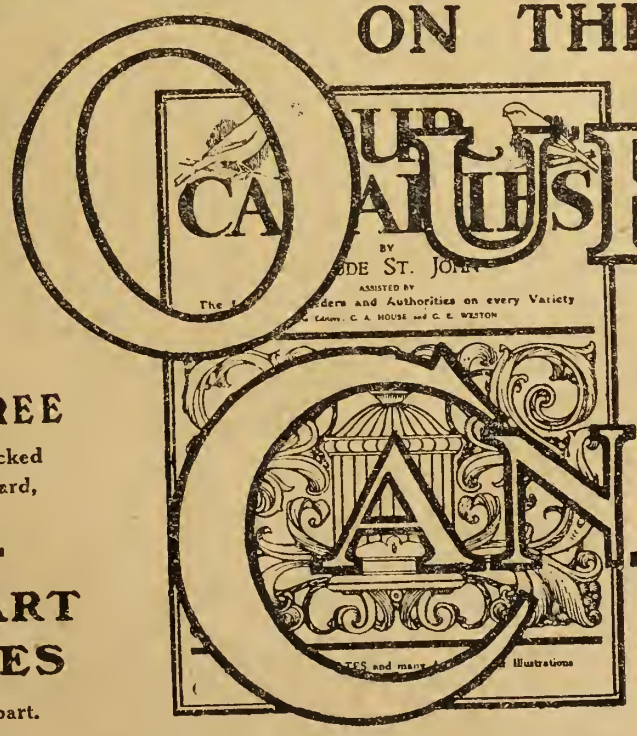
Wild Bird Life.

The Stormcock's Home.

If one is only fortunate enough to be in daily touch with a pair of nesting Missel Thrushes, he will have plenty to amuse and interest him. During the winter there was a small flock which frequented the meadow-land close to my garden in search of food. At the turn of the year they paired, each pair seeking its own district for breeding. At last three birds remained, and after a good deal of chasing and quarrelling among the branches of the old trees, one was eventually driven away. The two that were left went through the usual birdy courtship, and at last selected a site for the nest. This was placed some twenty feet from the ground, where a branch had been broken off short from an old elm; on the portion left there was just sufficient room for the structure. They went about their building operations in just the usual fashion without much fuss or bother, but as soon as the eggs were laid the old birds became jealous of the approach of other birds. The smaller ones evidently knew that it was dangerous to approach too near the tree, and generally kept at a respectable distance. The Thrushes were not very much concerned in their doings, but a pair of Jackdaws which had unfortunately selected another tree for their own domestic affairs, were a constant source of trouble and annoyance. Apparently the 'Daws had no evil thoughts regarding the large spotted eggs so temptingly exposed, but the Thrushes evidently thought it safer to keep them at a respectable distance, and so whenever the Jackdaws flew over or settled anywhere within the prescribed area, they were instantly followed by the watchful Thrushes, and their jarring scolding notes were heard from morning till night. The 'Daws, as a rule, respected the repeated requests of the Stormcocks to "move on," and in their turn allowed no intruders around their tree. The other day a wandering Rook settled too near the Thrushes' home. The cock was speedily on his track, but the black one, knowing his power, sailed quietly from tree to tree, gradually getting nearer the coveted eggs. The angry notes of the cock brought the sitting hen to the rescue. The combined attack of the two caused the Rook to be smarter in his movements. Unfortunately for him, he came within the boundary of the Jackdaws' castle. These sallied forth, and the would-be robber beat a hasty retreat. It is quite possible the Thrushes would have succeeded in defending their treasures by themselves.

Helpful Robins.

More than one observer has noticed that at times a generous Robin will take food to a nest of fledgling Song-Thrushes. But it appears curious that we have no record of their feeding any other species.



The Note of the Cuckoo.

The welcome notes of the Cuckoo were heard repeatedly on April 24th in the Chipstead Valley, a lovely stretch of wooded country much frequented by summer migrants, including the Nightingale, Nightjar, and Grasshopper Warbler. The valley is warm and well sheltered from cold winds. The first spring flower can be gathered here, and early migrants generally stay for a few days before moving north.

PART I. NOW READY.

PUBLISHER, F. CARL, 154, FLEET STREET, LONDON, E.C.

Questions and Answers.

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following Conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaints written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence, otherwise their letters will not receive attention. All the fees received from this source will be handed over in full to the "Referee's" Poor Children's Dinner Fund (London).*

(9)—*All queries must be addressed* **the Editor. "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Canaries.—**Claude St. John.** British Birds, Mules and Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c., Park and Lake Avienture—**Frank Finn,** B.A., F.Z.S. M.B.O.U., &c. Wild Bird Life—**H. Norman.**

NOTE.—If an answer is required concerning the proper mating, etc. of Norwich, Yorkshires, Crests, Cinnamons, Greens, Borders, Lizards, Scotch or any other variety of the Canary family, we shall, should the querist desire us to do so, be pleased to submit his question for answer to some leading specialist of the day on the variety concerned.

CANARY QUERIES.

Answered by CLAUDE ST. JOHN.

Slow Starters and Moulting.

R. R.—(1) The birds were not quite ready. If they have not yet begun to work in earnest, add a pinch of a mixture of equal parts gold of pleasure and sesame seeds to the egg food, and give a small teaspoonful of this daily for a week or so. You may also dissolve a pinch of Epsom salts in the water for one day. Otherwise, continue your present treatment. Leave the birds together and have patience. Things will probably come right in the end. (2) You do not say whether this is the same cock as referred to in the other reply. If it is, the moulting is quite sufficient to explain the delay in starting nesting. In addition to the staple seed diet, give half a teaspoonful of crushed sponge cake with four drops of whisky and two of cod liver oil emulsion well mixed in it every second day for a fortnight, and on the alternate days a small teaspoonful of hemp. Give dandelion as green food—two or three leaves daily. In the drinking water give six drops of tincture of gentian and a piece of sulphate of iron the size of a hemp seed every second day until feathers cease dropping. Do not colour-feed it now; it is not worth the trouble to do so in a case like this. The moulting may be due to a variety of causes. If only a partial moult, it may simply be completing last year's moult, in which case it will moult again in the autumn.

To Tread the Narrow Path.

Unexperienced.—You would do well to get "Canary Breeding for Beginners," 7d. post free, from our Manager, and dispense with the contradictory advice of many friends by referring to its pages when in a difficulty. When young are hatched give a little pure yolk of egg the first day only, then mix bread crumbs with it in gradually increasing quantities until by the end of a week or so you use a mixture of one part egg to two parts bread crumbs or crushed biscuit. Continue to supply the staple seed diet, but let it consist of a fourth part of summer rape instead of a third part. It depends very much upon the individual hen whether it is best to remove the cock when she begins to sit. Some hens will not sit when he is removed, but others do not object and hatch and rear the young better by themselves. You cannot tell until you have tried which will be best in your case. It is not necessarily a bad thing for the cock not to be continually carrying food to the hen on the nest. You should not give egg food, except a morsel about once a week whilst the hens are sitting. When there are young, give it daily in small quantities fresh two or three times a day. Aim at giving each time just sufficient for them to clear up before next feeding time.

How to Tame, etc.

C.C.C.—(1) Certainly; it is quite possible to tame the bird so that it will come on to your finger. I recently had the misfortune to lose one by an accident, which it was far more difficult to keep off your finger, or anywhere else for that matter, than to entice upon it. Others can be made practically as tame, but they never show the utter lack of fear and confidence in you that a hand-reared bird does. How is it done? In your case keep the bird in a rather small cage; supply only plain Canary seed as staple; give the bird unlimited attention, keeping it quite near you at all times, when it is possible, not continually prodding and poking at it, but frequently speaking or "tweeting" to it, or quietly offering it a hemp, or sunflower seed, a few grains of inga, or rape, or a tiny scrap of green food, each time after the first day or two trying to induce it to take it from your fingers, and if it does not do so, take it away, and try again presently. Once the bird's confidence is gained you may begin to take more liberties by opening the door and offering these tit-bits inside the cage, finally getting it to hop on to your finger for them, and to come out of the cage for them. Usually it is a terribly disheartening task until the bird begins to lose its natural fear, but patience and dogged perseverance will win. It is worse than useless to clip the wings. Some day I may treat the subject more fully. It is impossible to go into more details here. (2) The staple of three parts canary to one part summer rape only, with just a scrap of egg-food once a week. Begin to give the diet frequently mentioned for rearing young on the evening of the thirteenth day after the hen commences to sit. (3) It is not usual for the cock to sit at all. Some will go on for a minute or two when the hen goes off, and a few will sit for hours beside the hen, but they are the exceptions. (4) Again, individuals vary. Some scarcely sing a note whilst the hen is sitting, others will almost resume their full song. (5) The term "sib" is applied to birds which are inter-bred with blood relationship.

Training Young.

J. Mawhood.—Your queries may all come under one head. It would be a distinct advantage if you could set apart another room, or a portion of one, in which to train the young birds to sing, and this should, if possible, be removed quite away from the sound of the breeding room, or any other birds, for that matter. Here you should keep the special tutor, and remove also to this room all the young cocks as soon as they are quite well able to do for themselves and you are able to distinguish the sex. Keep them caged separately, and when they commence trying to sing their full notes watch them carefully, and if any of them appear to be getting too fierce or harsh in voice, cover the cage over lightly, and remove it further away from the tutor, where the tutor's notes will reach him in a subdued tone. After a time raise the cover a little each day until you finally remove it altogether, and again keep a close watch on such a bird, replacing the cover at once, if it, or they, show any tendency to sing too loud or harsh. In some few cases it may be found advisable to have a proper singing box handy for such specimens as these, in order to tone down the "pitch," to use an understood term, of their notes until they get well established in their song. On the other hand, if you have any which do not seem to get up sufficient nerve and "go" move them up near to the tutor, and keep them uncovered, and in a very bright position, if necessary for a time. These general rules will also apply if you cannot move the young from the bath-room. But in this case it would be best to cage up the cocks singly as soon as you are sure of the sex, and keep them all at one end of the room with the tutor, with a curtain to screen them off from the rest of the birds. The young hens should be kept together in large flights.

Canary Querists should send to our publisher for "Canary Breeding for Beginners," 7d.; "House's Canary Manual," 1/2; and "Yorkshire Canaries," 1/-, post free.

Young Dying.

Star.—I suspect the hens cease feeding the young which is the chief cause of your losses. Try the following dietary with the next round. Remove the cock when the hen begins to sit. Feed on a mixture of three parts canary, and one part rape as staple, and give about half a teaspoonful of egg-food once a week only, and now and again if the weather gets nice and mild a scrap of green-food. Withhold this in cold weather, as it may induce the hens to remain off the eggs longer than is good for them. When the young are hatched, give a little yolk of egg for one day only, and after this add biscuit powder to it in gradually increasing quantities, to two-thirds the bulk, beginning with about one-third of the bulk. Begin to give green food on the third or fourth day in small quantities. If the hens should show signs of flagging on the third day, then give a little greenstuff. Chickweed, groundsel, lettuce, or watercress. Avoid dandelion. Give all soft food in a crumbly state, not moist or sticky, and endeavour to make it as appetising as possible. Give also in very small quantities at a time—not more than they clear up before next feeding time. The same applies to greed food. If this does not produce better results, drop the biscuit and try good, plain, wholesome bread.

All Measures Failed.

Disheartened Brum.—A bad, bad nom-de-plume. Never say die. There must be something radically wrong with your treatment of the birds, and for one thing your feeding is very faulty. Try what a month of the following treatment generally will do. Separate the birds at once. Keep them in fair-sized box cages, and see they are perfectly free from draughts, damp, and frequent extremes of heat and cold. Keep cage and perches quite clean, and the floors of the former covered with clean gritty sand. Feed on a mixture of three parts canary to one part summer rape as a staple for both birds. For the remainder give the cock a teaspoonful of a mixture of equal parts hemp, inga, and teazle twice a week, and every second day give the same quantity of crushed sponge cake, with four drops of sherry and two of cod liver oil emulsion mixed in it, and sprinkled with gold of pleasure seed. After the first fortnight stop this, and substitute alternately the same quantity of egg food and a scrap of bread and milk sprinkled with soft sugar. Give a little chickweed or dandelion daily. Give the hen in addition to the staple seed diet a half-teaspoonful of a mixture of hemp, inga, and gold of pleasure, twice a week, and every second day for a fortnight a piece of bread and milk, as above. Give chickweed daily, but avoid dandelion if possible. You may give both birds a pinch of Epsom salts in the water for two days, and afterwards 20 drops of chemical food for a few days. After a month of this treatment try them again if the cock is in song and condition, but it will be useless doing so otherwise.

Brevities.

Two Roller Hens (C. Tec.).—Satisfy yourself there really is no exposure to draughts. Do not keep the bird too near a fire, or near or over burning lights in the evenings, but choose a position where there is the least difference between day and night temperature. Continue your present staple diet, but stop the egg bread and give instead a small piece of bread soaked in cold milk, drained, and sprinkled with soft sugar, and a pinch of gold of pleasure on the top of it, every second day for a week, and on the alternate days a pinch of a mixture of hemp, inga, and teazle in equal parts. Give two leaves of dandelion to each daily. In the drinking water give six drops of syrup of rhubarb and a pinch of Epsom salts for two days, and afterwards twenty drops of whisky, ten of glycerine, and two of eucalyptus oil, well shaken together, two days in every three for a week, and every second day for another week after if it seems necessary.

Mistaken Sex (G. B. H.).—An occasional error of this kind is to be excused, especially with novices. If you have satisfactory proof of the identity of the bird, I trust and believe the vendor will rectify his part in it. On your part, take away the nest, separate the birds, and mate them up again with known cocks in a fortnight from the time this appears.

Partial Recovery (A. W. J.).—It is at least a hopeful sign that the bird has recovered from the leg weakness. As she gains strength there is a chance that she may throw off most, if not all, of her other infirmities, though I am afraid you will do no more real good with her. The swelling under the eye is probably a tumour and could perhaps be easily excised by one possessing sufficient anatomical knowledge to be entrusted with the operation, but I would not advise any amateurish interference whatever. Beyond painting it occasionally with iodine, leave it to Nature to repair or compensate in her own way. Feed as previously advised, and keep up the standard of general health as high as possible.

Three Briefs (M. W.).—(1) If in good health I rather doubt its drinking any more than is good for it. If the quantity consumed is really excessive, add a crystal of sulphate of iron the size of a large hemp seed to the water for a few days. If it causes undue constipation, give an extra supply of green food. (2) You make no mention of cuttlefish. If you do not supply this, do so, and keep a flake in the cage all through the breeding season. If you already give this necessity, crush up a little old limey mortar to coarse powder and mix with the grit in the cage. You may also give twenty drops of Chemical Food in the water daily for a little time before the hen is expected to lay. (3) Separate this hen. Feed her up for a fortnight as frequently advised in this column, giving a little egg food, plus gold of pleasure and sesame, and hemp and inga, on alternate days, with two or three leaves of dandelion daily. Then mate her with a vigorous cock, and try again.

Food for Yorkshire (H. Anson).—As a staple diet give a mixture of three parts canary to one part summer rape in unlimited quantities. Twice a week give half a teaspoonful of a mixture of hemp, inga, teazle, maw, with now and again a few stray grains of linseed, millet, or a broken sunflower seed. All this you might give separately, a few grains at a time from day to day as tit-bits, instead of giving them all together in one day, but do not exceed the above weekly allowance. Once a week give a small teaspoonful of egg food, which you may vary from time to time with an equivalent quantity of bread soaked in milk and sprinkled with soft sugar or crushed sponge cake. Give a little green food daily in summer, decreasing it to once or twice a week in winter, when you may with advantage substitute a little sweet fruit. Supply a bath with same frequency as green food. Keep cage clean, strewn with gritty sand, avoid exposure to draughts or impure air, and do not hang cage in a window.

Eggs Drying Up (Anxious).—I am convinced the cause lies in the shells of the eggs, which are somewhat imperfect in substance, and of a too porous nature, which allows the moisture to evaporate, hence the drying up. Your feeding is not quite correct, and you also mated the hen too soon, or you could not have had two nests already this season. Separate the hen if she does not now show signs of immediately starting to nest again; feed on a staple of three parts canary to one part summer rape. Every second day give a piece of bread and milk the size of a hazel nut, with two drops of cod liver oil emulsion dropped on it and slightly sprinkled with soft sugar; on the alternate days a pinch of a mixture of equal parts hemp, inga, and linseed. In the drinking water give 20 drops of Chemical Food every second day. Keep a piece of cuttlefish in cage, and when the bird is again mated, smash up a little limey old mortar and mix with the grit on cage floor. After a fortnight of this treatment, you may try mating her again, when I think you will have better results.

Cause of Death (H. A. Coxon).—Sorry, I cannot venture to say what the birds died of, as nothing short of a post-mortem could reveal this with certainty. Unless you have recently purchased the Canary, which you do not make clear, I do not think it is likely to be septic fever, but if you are suspicious of this, you should put another common Canary into the cage, and if the same thing happens again have a post-mortem on the remains. Personally, I suspect one or two things—poison, or apoplexy. But as you say nothing about the feeding, or kind of cage, I cannot see how the former can have happened, and do not know if the latter was probable. Is it a painted wire or brass cage?

Changing Food (Only a Novice).—Yes; it would be quite possible to start the young on egg and bread crumbs, and then change them on to the food you mention. But you must not make the change all at once. When you wish to drop the home-made egg and bread crumb, begin to add a small quantity of the other food to it in place of bread each day, beginning with just a pinch of it in each feed for the first day, and gradually increasing the quantity until you have quite supplanted the egg, and then, in the same way, but by larger stages, drop the hard-boiled egg, and go on with the other food alone, or diluted with about half its bulk of biscuit powder. Yes, the food named is very good.

Loose in Feather (Piedcock).—I fancy there is nothing whatever wrong with this hen, and what you think is unnatural looseness of feather is merely a superabundance of it, which makes it appear slack when it is in a normal condition, just as many good Crests and Crest-bred may look slovenly in feather. Indeed, as you mention the extra size of your bird, I think it just possible the Crest-bred may not be quite innocent of this slack feather. I would advise you to mate up the bird at once, and leave them alone. The cock chasing the hen about is simply vigorous courtship, and will not last long before they settle down to more serious business.

Trouble With Hens (G. Thomas).—1. I cannot tell what may be the cause unless I know with certainty whether the blood you mention really was blood, and whether its source was internal, or due to some external wound. Keep her separate, feed on plain canary seed only as staple, give half a teaspoonful of summer rape every second day, and on the alternate days a piece of bread and milk the size of a hazel nut sprinkled with soft sugar and a pinch of maw on top. Give a little chickweed daily. In the drinking water give a crystal of sulphate of soda the size of a split pea for two days, and afterwards twenty drops of chemical food for a few days. 2. It is probable this hen may be ready to start nesting again by the time this appears, so it will not be safe to separate her from the cock. In addition to the staple diet give the pair a teaspoonful of egg food every second day with a pinch of gold of pleasure mixed in it, and on the alternate days a similar quantity of a mixture of hemp and inga in equal parts. Give three or four dandelion leaves daily.

About Mating (Cage Birds).—If you are sure the green and yellow bird is a cock you made a mistake in removing the second hen, because he seemed to object to her. Probably this was all make-believe, and although he might have made things lively for a day or so, if the hen was in breeding condition they would very soon have settled their differences, and set to work on more serious business. Better try again, and leave them together for, say, a week. If they seem to fight—well, let 'em fight. Your feeding does not seem quite correct. Look through replies in this issue for information on that point. "Canary seed mixed" may mean a mixture of many seeds—canary seed is a distinct variety alone. If in good health and active the eight or ten year old cock may breed successfully.

Young Dying in Aviary (M.L.).—I think it is most likely that your losses are largely due to having too large a proportion of cocks in the aviary, and perhaps the weather has not been quite innocent of some of the losses in an indirect way. Remove three of the cocks, leaving, of course, the young and vigorous ones. Stop the sunflower seed, except as an occasional special, and for green food give groundsel heads, chickweed, shepherd's purse, lettuce, or watercress, but stop giving dandelion. Instead of keeping a sponge cake hung in aviary supply a saucer of crushed plain biscuit, sponge cake, and egg food, mixed together to a crumbly consistency, and given in moderate quantities morning and afternoon. If the hens seem to flag in feeding at the end of the first week or ten days, you may add a saucer of soaked rape, and mix a pinch of maw with the other soft food, or you may substitute for the above food crushed and scalded dog biscuit.

A Bad Eye (Anxious).—I fear the eye is destroyed. I should suspect it has met with an accident in some way and injured it. See if there are any jagged ends of wire sticking out about the cage which could have caused it. Make a strong solution of boracic acid, say, a teaspoonful of acid in half a teacupful of hot water, and bathe the eye for a few minutes daily with this whilst lukewarm. Of course you must make a fresh supply daily, and not use the same solution twice. Also use a bit of fresh rag or wool each time and burn it after use. Continue the bathing until the running ceases, then write again and describe its appearance. Refer to this reply.

A Wheezer (C.B.).—See remarks to "F. Stagg," and try to ascertain whether your bird is exposed to any of the adverse influences named. If the heat of the room fluctuates much it would be better to move her to a cooler room where the temperature is more regular, but you must not make too great a change suddenly, or you will throw the bird into moult. Feed and treat generally as advised in the reply referred to, but instead of that medicine try the following: Give first six drops of syrup of rhubarb and a pinch of Epsom salts for two days, and then go on to five drops each of glycerine, oxymel of squills, paregoric, and ipecacuanha wine, in the water every second day for a fortnight.

Job's Friends (H. Wilson).—"He laughs best who laughs last." If, as you say, its song, as you heard it, is loud and long, and also rendered connectedly, with distinct throbbing of the throat, there is no doubt about its sex. It is only a little shy at opening out in a strange place. By the time this appears it may be fully rewarding your confidence. If it is not, feed it on the diet frequently given here for song birds—there are one or two such replies this week—and every second day for a week give half a teaspoonful of crushed sponge cake with four drops of sherry mixed in it, and sprinkled with gold of pleasure seed, and on the alternate days a scrap of bread soaked in milk, drained, and dusted over with soft sugar. Give a spray of chickweed daily. Do not hang it in the window; choose a nice bright spot within the room, where it will be quite free from draughts and great fluctuations of heat and cold.

Eating Young (Anxious to Know).—You should certainly have more reliable proof before you condemn the hen for this vice. Have you any mice in the room which might be the culprits? As regards the bleeding around the beak, you should have described this more fully. Is the beak sore, or where does the blood come from, and is it there regularly, or only when or just after the young disappeared? If the latter is the case I suspect this is the only evidence you have against her. If the bleeding continues write again and describe it more closely. Also say how long it has lasted. It may be that the cock pecks at her on the nest and causes it. By all means try her again, but next time remove the cock as soon as she begins to sit, and let her hatch and rear the young by herself. Do not begin to give the hemp next time until the young are about a week old.

Persistent Egg-binding (Yaduum).—The hen is either very young or in a weak condition, but it does not necessarily follow that she will be affected the same with every nest. Treat her as follows for a fortnight, and then, if ready for mating, try her again. In addition to the staple of canary seed give her half a tea-spoonful of a mixture of equal parts summer rape, hemp, and inga. On the alternate days give a piece of bread the size of a hazel nut soaked in milk, drained, and sprinkled with soft sugar. Keep a piece of cuttlefish in cage for her to peck at. In the drinking water give a crystal of sulphate of soda the size of a split pea for two days, and afterwards give six drops of tincture of gentian and four of aromatic sulphuric acid every second day for a week, and 20 drops of chemical food on the alternate days, continuing the latter for a fortnight or three weeks. When mating her again, in addition to cuttlefish, smash up a little old limey mortar and mix with sand on cage floor.

Disappointing Pair (Nestor).—You have only to exercise a little patience and things will come all right in the end. The cock singing as you describe was simply his way of making love to his bashful spouse. The birds are not really in very good breeding condition. Give a little egg food with a pinch of gold of pleasure seed every second day, and on the alternate days a small teaspoonful of a mixture of hemp and inga, and three or four dandelion leaves daily. For general information "Canary Breeding for Beginners," of course, 7d., post free, from our Manager. For every class and grade of fancier, "Our Canaries," just announced, is the book which will be unapproachable.

Loss of Young (G. A. R., Leeds).—The loss was certainly due to the illness of the hen, which caused her to cease feeding, as although you might have seen no signs of the illness when the young died, the nature of the trouble that presented itself so soon afterwards is sufficient to show that it was developing in the bird's system before the young died, and probably causing her much pain. It would have been a prudent course to have had a post-mortem on the remains to ascertain the nature of the swellings, which could only be conjectured about now. The case was wholly exceptional, and does not call for any alteration in your general management, assuming the dietetic portion to be on as good lines as the rest of your treatment seems to be. You, however, say nothing at all about feeding. If you have any further trouble write again at once, and do not omit those particulars next time.

Chemical Food (Dad).—The sediment you mention, when using this preparation, is a common thing if given in ordinary hard water. It may be avoided by using distilled water when giving this medicine, or failing that, a tolerable substitute is provided by water which has been well boiled and allowed to stand until cold. For general use I should prefer chemical food to the other preparation. But why use drugs at all, habitually? It is not a wise practice; reserve them for occasions when there is a real need for them.

In Doubt of Sex (Pixie).—Considering the result of the previous treatment, I think you may safely conclude the bird is a hen. There is such a thing as a singing hen, and some of them will make quite a tolerable show of singing, but their efforts are almost invariably short and broken, and cause little of the pronounced swelling and pulsating of the throat during the performance which distinguishes the cock. There is a difference in the appearance of the vent at this season, which may be seen by catching the bird and blowing aside the feathers on the abdomen. That of the cock is more prominent and pointed than that of the hen, which is practically level with the line of the abdomen. But even this may be mistaken by a tyro, unless compared side by side with an undoubted cock.

Canary Squeaking (F. Stagg).—The bird's condition is doubtless solely due to its position in the window. You must move him elsewhere before you can hope to make any improvement at all in him. Keep in a box cage of fair size, in a bright position within the room, not too near a fire, nor near burning lights in the evening, but where the air is always pure and fresh, and yet quite free from draughts. Feed on a staple of three parts canary to one part summer rape. In addition, give twice a week a pinch of a mixture of equal parts hemp, black rape, inga, and gold of pleasure; on two other days give half a teaspoonful of crushed sponge cake with four drops of sherry and two of cod liver oil emulsion mixed in it; and on two other days a piece of bread the size of a hazel nut soaked in cold milk, drained, and sprinkled with soft sugar. Give these extras alternately—a different one each day. Give a spray of chickweed daily. In the drinking water give twenty drops of whisky, six of oxymel of squills, and two of eucalyptus oil, well shaken together two days in every three for a week, and every second day for another week afterwards.

Curious Behaviour (Puzzled).—It is impossible to account for the reason of the hen leaving the eggs for an hour and then going back without knowing the full circumstances of the case. Some hens will act in this way when the cock is first taken away, or a fresh hen may even do so at any time after his removal if he happens to be within earshot and calls to her. It would have been worth while allowing her to sit her full time upon the eggs, and the stray chance of their hatching. Give her a morsel of bread and milk sprinkled with soft sugar every second day for a week, and on the alternate days add six drops of tincture of gentian and four of aromatic sulphuric acid to the drinking water. The sample of canary seed is very small, and none too well ripened. It is sweet, but the quality generally is poor.

Moult Questions (Soft Moult).—(1) The best remedy is to remove the cause—generally a draughty or damp position, or where there are frequent extremes of heat and cold. See these points are attended to. Feed on a staple mixture of three parts canary to one part summer rape. Every second day give half a teaspoonful of crushed sponge cake with four drops of sherry and two of cod liver oil mixed in it, and sprinkled with maw seed, and on the alternate days give a similar quantity of hemp seed. Give two leaves of dandelion daily. In the drinking water give six drops of tincture of gentian and four of tincture of steel every second day until the feathers cease dropping. (2) Treat this bird the same as above for a fortnight except the medicine in the water. Instead of that, give twenty drops of chemical food daily for a week or so.

Another Moulter (W. Weason).—See reply to "Soft Moult," and treat your bird the same for a fortnight. Then feed the same as advised to "F. Stagg" for another fortnight. Also see that the bird is kept under healthy conditions, as mentioned in reply to the last-named correspondent.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. Weston.

Breeding with Redpools.

Tiny Tim.—I think you may hope to succeed in breeding with your Lesser Redpolls. Anyway, it will be interesting to try, and the cage you have is a good and large one (40 x 15 x 12). Redpolls are among the easiest of British birds to breed in captivity. When house-moulted, they are not at all easy to sex, and anyone is liable to make a mistake. If you purchase a field-moulted bird with a red breast, you will be certain of having a cock, the hen Redpoll never assuming this carmine tinge on the breast feathers. As one sings and feeds the other, it is fairly certain you have a true pair. These birds get steady wonderfully soon, and, for your purpose, field-moulted birds will prove just as good as house-moulted ones. Feed them as I frequently recommend for Linnets. When breeding, you can add a little egg and biscuit, well sprinkled with maw seed, to the usual seeds given. But if you can get a free supply of shepherd's purse, cutting it close to the ground and throwing it to them wholesale (it swarms with tiny insect life), they will rear the young without the assistance of egg, giving a little coarsely crushed sweet biscuit (damped) and maw seed only. Flowering groundsel and chickweed may also be freely given. You want to hunt out all the live food you can for them. A few small mealworms, flies, smooth caterpillars, grubs, earwigs, aphides (green-fly) off rose, etc., leaves, live ants' eggs—any and all will receive a warm welcome. About the seventh to tenth day is usually a ticklish time when rearing young British birds (and also many of the rarer Hybrids), and it is then the live food is most helpful.

Hand-rearing Thrushes.

Miss Scott.—This is a favourite query of mine; have had it sent to me hundreds of times (almost). The "Nutshell" booklet on the Thrush (post free 2½d.), you will find, gives very detailed information on hand-rearing. Briefly, this is the procedure: Take the young when about ten days old—nest and all, if possible—and keep them cosy, say inside a wicker basket and on a bed of hay. At night throw a piece of flannel over the basket; keep it on during the day if cold. Feed every hour at first; about every two hours later on. For food, crush two Osborne biscuits and beat a hard-boiled egg up very finely, in a teacup, with a fork. Then mix the biscuit with the egg, and make it of a rather sloppy consistency with new milk. This is best fed just slightly warmed. Always be perfectly sure it is fresh and sweet; it should be prepared fresh twice daily, if possible. A small, flat piece of wood with a suitably shaped blunt end can be used to feed with; or a large, blunted toothpick. As the youngsters get older, cut small mealworms in halves, dip them in milk, and pop them into their mouths; also any flies you can capture. It is quite a simple task to hand-rear Thrushes. The chief thing is to feed very often, and to give only a very little at a time. Keep the nestlings and their surroundings scrupulously clean, or they will not thrive.

Dove Keeping.

E. K. S.—I daresay you will find the Ring Doves make nice pets, if your fancy runs that way. Doves are not at all difficult to keep. They look very pretty flying in a good-sized outdoor aviary, though one drawback is their pugnacity towards others of the same species, especially during the breeding season. They breed freely, however, housed in separate pairs, in biggish cages. The latter should be not less than three feet long—four feet by two feet by three feet high would be a very good and suitable size indeed. Provide perches of suitable thickness, and a couple of nest-boxes. The floor can be covered either with dry, coarse-cut pine sawdust, or well teased out peat moss litter. They require a tin of pigeon grit, and water for drinking and bathing; freely in the summer for the latter purpose. As their staple diet, get a seedsman to put you up a mixture of the smaller grains—wheat, canary, dari, hemp, oats, peas, rice, millet, etc. Keep them well supplied with coarse grit. For a change of food, they are very partial to any nuts (walnuts, brazils, cobs, etc.), coarsely smashed up; also plain biscuit treated in similar fashion. Change of diet is especially useful at moulting time. Some birds enjoy an occasional mealworm, especially during the moulting period. A little mixed bird seed will do no harm at times, though much of it is sure to be wasted.

A Matter of Song.

Wonderland.—It is largely a matter of opinion. My own opinion (I give it in fear and trembling) is that the Garden Warbler is in captivity a nicer songster than either Blackcap or Nightingale. But in my experience it is not so hardy; also it is timid and shy, and not much given to singing "in company." I am, of course, speaking of adult caught birds. The Garden Warbler is a fairly plentiful bird, though somewhat localised in distribution. But it is very shy, loving to flit among thick undergrowth, and so is not easily seen. It is a very sober plumaged bird—in fact, I have heard fanciers refer

British Bird Queriists should purchase our "British Bird Manual," published in two parts, "Hardbills" and "Softbills," price 1/- each, or in cloth cover together, 2/3 post free.

to it as a "small edition of the Nightingale," and really the description is apt. Like Philomel, too, the Garden Warbler sings a sweet, mellow, and altogether charming song. A rippling warble, it is at times something like the song of the Blackcap, and at others it greatly resembles (though fuller) the song of the Greater Whitethroat. The call note, which betrays the bird at once, is a harsh "tcc," "tec," not unlike the sound produced by knocking two small stones together.

An Exhibition Thrush.

Brutus.—It is certainly important that a Song Thrush should be very large to become a "big winner"; but a decent sized bird, if well built (thick set), and good in colour and markings, stands an excellent chance. The bird should be as big and stout as possible, standing up boldly from the perch, showing a broad well-rounded chest, evenly spotted (mooned) from the throat right down to the flanks, and well between the legs. The moonings to be dense black (or, perhaps, brownish-black), as free from grey as possible, and distinct, i.e., not confused, running one into another so as to appear blotchy. Head long, but broad (not narrow skulled), eye large and bold. The colours of the plumage (roughly upper parts olive-brown, under parts a light yellowish-brown, running to white between the legs) to be as rich and pure as possible. Wings and tail must be carried tight and close, the former free from any suspicion of crossing. The bird must be in good condition, scrupulously clean and sleek, and carry a satin-like sheen on the plumage. Keep your bird in a good-sized stock cage, to guard against possible fraying of the plumage, the tail and wing flights especially. I have known a small point like this lose a bird first position more than once in these days of hot competition. Give a suitable stock cage, with a door at the end, through which to run him to and from his show cage.

Insect Life for Seed-eaters.

Query.—I do not quite know why you should be "puzzled" at the recommendations of live food for seed-eating birds; possibly you are not aware of the fact that they utilise this very largely when rearing their young in a state of nature. I find that the only time of the year British seed-eaters—or perhaps I had better say the popular Finches, the Goldie, Linnet, Greenfinch, etc.—devour mealworms greedily, show a positive craving for them, in fact, is during the continuance of and until thoroughly recovered from the moult; at that time of the year they are absolutely invaluable. There is one exception to the above rule, however—when a bird is ailing. If anything occurs to knock my birds out of sorts, and they exhibit a distaste for the ordinary hard seed fare, I in every instance find live insect food eagerly welcomed. I make not the slightest doubt but that it has saved—or prolonged, which you like—the life of many of my best Finches. I have fed some show seed-eaters—a Siskin for one—on mealworms only for two or three days, and brought them round, where I am sure other foods would have failed; in fact, in many instances the birds had got beyond eating seed. In the spring and summer, however, the birds neglect mealworms—though invariably open, one or other of them, to accept one or two when offered—for the "greenfly" or blight to be found on the leaves of plants, and for the host of wriggling grubs and other insects to be found in most patches of thick grass, especially when same is growing in a lush neighbourhood. As I have before remarked, a patch of shepherd's purse growing in the right spot (not, for instance, on a dry sandy soil), if cut close to the ground and well shaken over a newspaper, will astonish the gatherer by reason of the multitude and variety of "creepy, crawly things" it contains. Well, watch your birds devour these things, and you will go and gather them more.

Brevities.

Who is "Joey"? (G. S.).—There is "Joey" Chamb——, but I must not mention *his* name, or I shall be hauled over the Coe-ls for introducing "political bias" into my answers. "Joey" is a popular name for the Lesser Redpoll (not the Greenfinch), and it has its origin in the call-notes of this bird, which resemble the syllables "jo-ee."

A Bullfinch (A. B. T.).—Taking the season of the year into consideration, along with the symptoms mentioned, I think the best "cure" for your Bullfinch would be the provision of a dainty, trim little wife.

Drinks Too Freely (J. S.).—Get from a chemist half-an-ounce of crystals of citrate of iron and quinine, and dissolve a small pinch in two tablespoonfuls of drinking water, fresh daily. This should make a difference in a few days' time. Why not try the plainer stock seed mixture which I recommended for Linnets?

Identity of Bird (Ignoramus).—The bird is undoubtedly a cock Bramblefinch. This species is of no use for song purposes. Brambles have no music in them; only a few notes that would disgrace a rusty mangle. Your feeding is correct, except that you should add a little teazle to the stock mixture, and give a little sunflower and hemp seeds frequently as "tit-bits"; likewise an occasional mealworm, smooth caterpillars, small grubs, etc.

When Moulting a Bullfinch (Bullfinch).—This bird can be moulted with equal success in a large cage as in an aviary. I use cages myself, anyhow, Give the ordinary seeds, but supplement them with a very liberal supply of such berries as rasp, black and privet, also haw and mountain ash, while ripe seeding plantain, thistle, chickweed, docks, nettle, shepherd's purse, etc., are important. These things will bring him out a good colour and in good form.

List of Hardbills (Americus).—The hardbills—that is, seed-eating birds—given in the list of the National British Bird and Mule Club are:—Greenfinch, Hawfinch, Goldfinch, Siskin, House Sparrow, Tree Sparrow, Chaffinch, Bramblefinch, Linnet, Mealy Redpoll, Lesser Redpoll, Twite, Bullfinch, Crossbill, Corn Bunting, Yellowbunting, Cirl Bunting, Reed Bunting, Snow Bunting, and Lapland Bunting. All these are, of course, "genuine Britishers" (except when imported), and capable of being kept in either cages or aviaries.

A Kind of Screech (B. Legg).—Your Goldfinch Mule is in very high condition—what fanciers call "rank" for breeding. Hence the "kind of screech" he has commenced to introduce into his song. He is relieving his pent-up feelings in the only way (poor fellow) open to him. There is nothing to be alarmed at. You want to hear old muling Linnets "screech" when they feel love's fires burning within them. I have one now who makes my hens almost jump out of their skins when he commences to holler at them.

A Linnet Mule (W. Utting).—Do you think the "picking" is due to the presence of red-mite, or bird lice? If so, then the irritation set up might well be the cause of the birds not singing out. You should consult the information on "parasites" in "Cage Birds' Annual"; or get the "Nutshell Booklet" (post free 2½d.), dealing with the ailments of birds and their cure. If you think the Mule merely needs a pick-me-up (I can't tell precisely from your letter), then try that recommended W. J. Salmon this week, but in five or six drop doses.

A Goldfinch and Muling "Form" (A. B. T.).—I have frequently stated that it is quite unnecessary to wait until the black streak disappears from the upper mandible before pairing up a Goldfinch—providing it is in full song and vigour, of course. What a ridiculous notion this black streak idea is; and how hard it dies. I have now good eggs from two Siberian Goldies (in field plumage) which have as yet nowhere near clear beaks. The actions of the bird and the state of its vent are the reliable guides to early breeding condition. Let your Finch run with the hen at once.

A Nine-Year-Old Thrush (W. J. Salmon).—This is a fair age, but pales before the 25 years recorded in last week's Cage Birds. Try your bird with a course of tonic medicine: there does not appear to be much the matter with him. Get one ounce of syrup of hypophosphite co. B.P. from a good chemist, and stir seven or eight drops into two tablespoonfuls of drinking water. Give fresh daily for a week. Then after two days on plain water give the syrup for another week. This should "buck him up." Give some hard-boiled minced egg amongst his food; and all the suitable live food you can.

FOREIGN BIRDS.

Answered by Wesley T. Page, F.Z.S. M.B.N.H.S., etc.

Various.

C. C. C.—(1) Yes, but kept under these conditions a lump of old mortar rubbish and a piece of cuttlefish should be kept continually in the cage, and tufts of grass in flower (seeding grass), obtainable from any hedgerow or piece of waste land, should be liberally supplied. (2) This is very variable; they will settle down in due course if you leave them to take their own course. They do not need any artificial heat, but must not be subjected to draughts. (3) See under query No. 1. (4) Patience and steadiness in attending them; a bunch of flowering grass may induce them to come on to your hand to feed, and the other will then soon follow, but you must not attempt to force them. (5) Providing the husk is not meddled with, they will breed in a cage in an ordinary living room. (6) It is as yet full early, but new purchases often take a little time to settle down. (7) Place the cage at about ordinary table height, out of reach of draught when the window is open, yet where they will get light and fresh air. Arrange your cages to best fall in with these conditions, and you should meet with good success.

A Feather Puller.

E. C.—Give Dinneford's magnesia as often as you possibly can without scouring the bird. Also spray the bare parts with glycerine, one part, and water three parts, till the sore places are healed: as soon as this takes place paint the bare parts as far as possible with Spratt's Pennakura; though you cannot handle the birds you might manage to do this with a camel-hair brush. When not giving the magnesia well colour the drinking water with Parrish's chemical food. You will have to persevere, as this trouble is most difficult to erradicate, and is usually a lengthy proceeding. Diet: Seed mixture, ripe fruit ad lib, plain biscuits, nuts in variety; a stale crust

Foreign Bird Queriists will find in our handbook, "Foreign Birds for Beginners," 1/1, and "Budgerigars and Cockatiels," 6d. post free; a mine of information of use and interest.

of household bread or piece of dry toast just moistened, not saturated, with the chemical food water will also help. Do not give tea, coffee, or milk sops, table scraps, or any kind of animal food whatever. Keep the cage where the bird will get as much light and fresh air is possible without subjecting it to draught, and as soon as the days are warm enough it will greatly help to have the bird out of doors as much as possible. Keep it occupied as much as possible with your presence, also with cotton reels and sticks to cut up and play with. Anyway, you must give the treatment time to act. Report progress in two or three weeks.

Birds for Aviary.

Morning Sun.—You should meet with good success. Do not attempt a rock garden; put in some course growing grasses, ferns, etc., between the rocks, and let them grow wild, but the grass plot should be cut and swept occasionally to keep it sweet. Keep the centre of the aviary pretty open, but have plenty of cover round the sides. Wild clematis does well, and makes good cover. I should try a pair of small Quails, either Chinese Painted or Harlequins. Also two species of Doves, say Diamond and Australian crested. Put in pairs of the following: Common and Green Avadavats, Zebra Waxbills, Diamond, Ribbon, Zebra, Parrot, Cherry and Chestnut-crested Finches, Masked, Long-tailed and Rufous-tailed Grassfinches, Grey and Green Singing Finches, Pekin Robins, Silverbills and Spice Birds, Bronze and Magpie Mannikins, White and Grey Java Sparrows, Bengalese, Striated and Bib Finches; British Migrants do not winter well out of doors; you could keep Lesser Whitethroats, and Willow Wrens, but you must bring them indoors for the winter months. Repeat query if all is not clear.

Brevities.

What Bird? (Beginner).—Apparently the bird with a blue breast was either a Red or Black-headed Gouldian Finch. The other bird was evidently a Long-tailed Grassfinch; both are beautiful species, and the latter not at all difficult to keep, but the former are rather difficult to establish or acclimatise. You would find our booklet, "Foreign Birds for Beginners," 1s. 1d., post free, very helpful to you, as a beginner, in the Foreign Bird Fancy.

Young Budgerigars (Novice).—There are quite a number of replies in this issue re Budgerigars which should prove helpful reading to you. Providing the birds are not overcrowded there is no need to remove the young Budgerigars; they can be left with their parents; but if your space is very limited, and you must separate them, then do so as soon as you see the youngsters are able to cater for themselves.

Sexing Cardinals, etc. (B.H.S.).—Unless you have fully adult birds to compare it is hopeless to expect to be able to distinguish one from the other, save by their demeanour. I should say your first bird was a young cock, and the second or recent purchase a very fine hen. With adult birds the cock is the more brilliant of the two, but the difference is not startling and the bill of the hen is narrower at the base, and more tapering than that of the male; in fact, bis may be stubby in comparison. The hens do sing, but not to the same extent as the males, and their song lacks compass and variety in comparison. I am in a difficulty to recommend a cheap book; usually these points are ignored; if you care to conform to rule 7 (see page 440), perhaps I may be able to help you.

Budgerigars in Bad Plumage (Nestor).—I have seen Budgerigars nest and rear young in an all-wire cage 16in. square, and there is every probability that a pair or two pairs would breed in your roomy cage, if you can get in four husks without the husks being crowded too close together. The poor plumage of your young birds is congenital, usually arises from inbreeding, and it is probable that your parent birds were brother and sister. Change either the cock or hen from what you know to be a totally different source to which your present birds came from. You might possibly make an exchange with some local aviculturist with happy results for both. The only remedy when this trouble appears in your stock is the introduction of new blood.

Black-cheek Lovebirds (H. B.).—Unless your birds are fully adult, there would be no difference at all outwardly, and in young birds the eye colouration is a delusion and a snare, though this is a fairly safe guide with adult birds. However, I have carefully noted your query, and I am of opinion that you have a true pair. Black-cheeks are more at home in a roomy log than in a husk; they will line the log with millet sprays, bents, etc. Black-cheeks take a little time to settle down, and if you have young birds it is quite possible they will not settle down to breeding till quite late in the season. You have ample accommodation in your room for pairs of Many-colour and Bourk's Parrakeets and Blue-wing Lovebirds, and you could add one or two more pairs of Budgerigars or a pair of Cockateels.

To go with Budgerigars (J. R. S.).—You should not have more than four breeding pairs in an aviary of this size; when young birds are about your accommodation will be taxed to the uttermost. You can keep Blue-wing, Madagascar and Black-cheeked Lovebirds, Cockatiels and Rosella Parrakeets with your Budgerigars; the three latter are the more probable breeders. A nice selection would be one pair each Rosella Parrakeets, Black-cheek Lovebirds, and Green and Yellow Budgerigars. If preferred, you could substitute Cockatiels for the Rosella Parrakeets. The arrangement of your aviary is satisfactory, but you would find ¾in. spruce planking, two thicknesses, with a layer of roofing between, much more satisfactory, and little if any more costly than the three ply wood and zinc. It is not safe to keep Parrakeets and Finches together.

Budgerigars Fighting (G. V. M.).—See several replies to other correspondents almost covering your query. I can only counsel patience, and advise you to put up even more husks, but I am of the opinion that your birds have not been long in their present quarters, and that they will settle down. Well line the back of your aviary with twiggy branches (pea sticks answer well), and partially screen some of the husks with same. At the commencement of the breeding season there is sometimes a bit of a hubbub, but usually nothing serious, at least I may say it has never been my experience to have trouble with this species, and I have known some odd birds. Keep a supply of old mortar rubbish, crushed egg shells, and cuttlefish in the aviary, and you will seldom, if ever, be troubled with egg binding. Let matters go on as they are for a month, and I opine the birds will settle down. Your aviary is well arranged, and you certainly ought to have good luck.

Shed for Budgerigars (Novice).—The shed you describe will answer well for the Budgerigars, but a good-sized square of glass should be inserted in each end; the glass must be covered with wire-netting on the inside. The 6ft. frontage of wire-netting should only have a 11in. skirting board, all the other portion being open netting. Yes, board up 3ft. of the frontage, and also have an interior board partition extending half way across the aviary. The result will be that you will have a 3ft. shelter shed with ample space for ingress and egress. Your other arrangements are very good; tar will not harm the birds at all, simply dirty their plumage if they come in contact with it. By the way, Brunswick Black is the best medium to coat the wire-netting with. Do not overcrowd: start with three or four pairs; you have to leave accommodation for the young birds. A pair of either Cockatiels or Rosella Parrakeets could be kept with the Budgerigars. Our booklet, "Budgerigars and Cockatiels," 7d., post free, should prove very helpful to you.

Combative Budgerigars (Vadnum).—My experience has been that these birds will agree together in any number; that is, of course, according to limitations of space, and you certainly have ample accommodation for three pairs. I am inclined to advise you putting in a pair of cockatiels, and seeing if this would draw the Budgerigars' attention from each other. The Cockatiels are quite amiable with smaller species, other than this I can only counsel patience, and leave them to settle down. I also suggest putting up a few more husks and well covering the back of aviary with twiggy branches (pea sticks answer well). You would have to provide a largish box, with a concave bottom, for the Cockatiels; such can be purchased from our advertisers.

Diet for Indian Parrot (Kit).—Seed mixture, two parts each canary and white millet seeds, and one part each hemp, oats, dari, maize, and sunflower seeds, well mix and keep up a regular supply in cage. Also supply ripe fruit, plain biscuit, and nuts in variety. A crust of stale household bread or dry toast just moistened, not saturated, with water, is also wholesome. Do not give tea, coffee or milk sops, table scraps, or any kind of animal food whatever. Keep a piece of cuttlefish in the cage, and well colour the drinking water with Parrish's Chemical Food during the period of the moult. If there should be any signs of constipation this should be relieved at once by one or more doses of Dinneford's Magnesia.

Budgerigar Queries (M.N.).—There are several replies to other correspondents in this issue, which I must refer you to as supplementing the following brief replies. (1) Out of doors it means a small aviary, and for them to be safe in cold weather it ought not to be less than 6ft. long by 3½ft. wide by 5ft. high. Of course here you could keep several pairs. In an indoor cage 2ft. long by 1½ft. wide, and 1½ft. high, your birds, after they have settled down, should breed freely and flourish generally, providing you contrive to let them have light and air without draught. (2) Canary and white millet seeds, spray millet, a few oats, greenfood (flowering grass or lettuce), and when they have young to feed, a few pieces of plain biscuit. (4) Put a husk at each end of the cage, fix them as high up as possible. (5) They do not need fire heat, but they should do well in your dining-room. (6) Put in some twigs and branches for them to climb about on, and keep the cage bottom well covered with gritty sand; they require water to drink.

Quail with Sore Feet (D. Pedloe). — Kindly inform me under what conditions you are keeping the bird, and also your general treatment; I can then possibly give you more definite help than I am able to do at present. Provide it with a small turf in one part of its quarters. This will be more comfortable for its feet than grit, but this should only occupy one portion, not more than one-fourth of its quarters, or less, according to space it has access to. Soak the feet in tepid water, to which has been added a little Condy's Fluid; if the sores are soft, and contain matter, this must be got rid of by gentle pressure. Half-a-dozen mealworms daily may be given so as to keep the bird fit and contented, also an occasional dose of Dinneford's Magnesia in the drinking water.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 2, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 21s. Subjects for post mortem examination must be sent packed in a box direct to Mr. Yates, with the fee, this and any accompanying letter being kept from contact with the dead bird. Any bodies sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Aviator.—Replied by post.
Gouldian.—Replied by post.
Shropshire.—Replied by post.

Liscards.—Bronchitis was the commencement of the trouble with your Canary, contracted through chill or other similar causes, eventually extending to the lung structure and setting up broncho-pneumonia, to which it succumbed. It is strange he showed no sign of trouble between the commencement of the attack three weeks ago and last Tuesday. The disease had been progressing slowly in this interval, and had it not been for the recent spell of cold, windy weather, probably it would have overcome the trouble.

D. Forrest.—Inability to get rid of a shell-less egg caused the death. This egg was a particularly large one, and completely obstructed the oviduct. This is not always an easy condition to treat; possibly had you steamed her, in addition to your other treatment, you might have ensured its removal. Some attribute this trouble to inertia, or weakness of the walls of the oviduct. Mechanical interference, such as puncturing of the egg, using a fine sterile instrument, is at times resorted to, but needs a great deal of skill; steaming to relax the parts is as good a method as any, whilst at the same time introducing a little warm olive oil into the vent by means of a fine feather aids the passage of the egg. As a preventative you might supply your birds with crushed and finely-powdered egg shells. Crushed oyster shells are used with remarkably good results for this purpose for hens that lay soft-shelled eggs.

GENERAL.

Answered by the Editor.

Cuttings (S. L. Southcombe).—Many thanks.

A Suggestion (J. Kay).—We could not publish the names and addresses without rendering ourselves liable to an action at law. It is an unfortunate state of the law, we quite agree.

Improved Rollers (O. H. Williams).—You do not state in your letter in what respect you have succeeded in improving the Roller Canary. Will you kindly let us know this?

An Address (J. Paxton).—It is contrary to the rules of the Press to disclose the addresses of correspondents without permission. We will, however, gladly have addressed any communication you care to send us in a stamped sealed envelope.

Disinfecting a Parrot Cage (Grimston).—A 10 per cent. solution of lizal, used hot (with soft soap, if you like) will thoroughly disinfect the cage if the latter be carefully washed with it (perches, utensils, and everything). An article on "Disinfection" is one of the features of "Cage Birds 1910 Annual."

Many Matters (C. C. C.)—(1) Birds must be bought direct from the advertisers using our columns; the purchase money may be deposited at this office (see rules). (2) There is no stated time; these things have to take their turn, if accepted. (3) A net (such as a strong butterfly net) is the best thing to use. (4) The first number of CAGE BIRDS was dated January 18th, 1902. (5) You need not fear that the birds will catch the diseases of human beings, or *vice versâ*.

Correspondence.

How to Determine the Sex of Linnets.

SIR,—The only way to tell the sex of grey Linnets is, I find, by opening their wings, when you will find in the case of the cock bird the white on the flight feathers goes right up to the shaft of feather, and in the hen there is a black mark between the white and shaft of feather.

R. B. STUBBERFIELD.

SIR,—I noticed in CAGE BIRDS letters from fanciers wanting to be able to sex Linnets. The best way is to get the bird in your hand and pull his wing out, and if you see the white running right up to the quill, you will know the bird is a cock. You must not go by the pink on the breast if you are buying one, as there are a lot of them that are splashed with paint. The Greenie cock is easy to tell, as he has yellow bars on the wings.

J. BONA.

A Singing Hen Canary: Will She Breed?

SIR,—In reply to your correspondent re singing hen Canary breeding, I wish to say that I am similarly circumstanced. I have also a Norwich hen, which will be 3 years old in June. She laid 25 eggs last year, and hatched out only 7, the remainder being clear. She commenced to sing before Xmas last, and kept it up until quite recently. As she was in good condition I matched her up with the same cock as last year. She built a nest almost immediately, sitting in it since, there being no eggs. I would like to hear another fancier's opinion on the matter. I wish CAGE BIRDS every success.

"MULER."

SIR,—I had a Yorkshire hen Canary which laid 3 eggs, sat them, and on the thirteenth day got off them, but would not go back to them, and on the fourteenth day died. So I was in a fix. I also had a Yorkshire hen which had three eggs and could not sit them. So two days before the hen died I put a Crested hen on the other hen's eggs. When the said hen died this Crested hen, which did not lay any eggs, and was sitting the other's three, I took off them and put on the young ones which the hen that died had brought out; there were two, as one was dead in the shell, and since then one of the two has died. The one which is living is a young cock and a good singer and 5 weeks old. The foster-mother has got three of her own eggs and is sitting on them all right. This (Crested) hen I bought for a singing cock for 5s., and she is a champion loud songster and a good mother; and I could have sold her many times for three times the amount I paid for her. I have 12 Canaries and I have had two nests with one and four from another, and they are bonny young ones, two weeks old yesterday. I have plenty of proof that what I say about this singing hen is correct.

A BREEDER.

Wake Up, Fanciers!

SIR,—Of the three letters you published last week, only one, fortunately, calls for my comment. The letter I refer to is the one signed by Constance D. Fitzmaurice, who asks me several questions, and makes several statements which I must answer and criticise. She first asks me whether I can deny that my first letter was objectionable. In view of the fact that she herself objects to it, I certainly cannot deny it. I think my opponent's question is inspired by failure to appreciate the difference between an objectionable letter and an abusive one. A letter which contains an unpleasant truth is generally objectionable, even though couched in terms of placid suavity, if read with guilty eyes. I certainly think, however, that the statements hurled at me in April 9 issue were meant to abuse rather than to argue, to hurt rather than to convince. I, further, did not, as she suggests, accuse Miss Fitzmaurice of "Limehousing Socialistic nonsense," that accusation (or rather suggestion) I made at others. She asks me what there is socialistic in protesting against Mr. Biron's decision in the Flowers-Preston case. I reply to that question that there is nothing socialistic in it. I thought I made myself clear upon this point in your last issue. I say that there is something distinctly political in the methods adopted by some of your correspondents in protesting against the judges ruling in the Flowers-Preston case. Upon examination I find their letters to consist of class war, pure and simple, everything that relates to the Fancy being left to someone else to see to. Therefore, I assume that these letters were written to introduce class war, i.e., Socialism, into your columns. I do not say it is deliberate; not being gifted with second sight I cannot speak definitely of the motives of people I have never seen. I do say, however, that it decidedly has the appearance of being deliberate and Machiavellian. If my opponent wants to know who are the enemies of the Fancy I can put my finger on the very people. They are the "Heaven is *my* home" type of canting killjoys, the sickly worshippers of Nonconformist-conscience-total-abolitionist-propaganda, who, inflated with the gas of their insipid beverages, are loquacious in their denouncement of all forms of sport, from the king of sports, horse-racing, down to the humble whist drive. In these sanctimonious humbugs all kinds of sportsmen, whether they be princes or peasants, "fox slaughterers," or cage bird fanciers, find a common foe. It is as sportsmen that I appeal to my fellow fanciers to drop this snivelling pessimism, and to show a little of that cheery optimism which—born of constant difficulties encountered in the pursuit of our hobby, and of manly effort to overcome them—has always been said to characterise the British bird Fancy. We must stand or fall in the strength or weakness of our own position; we cannot build our virtues on the offences of others. We must show our enemies that it is as ridiculous to say it is cruel to cage birds as it would be to say that it is cruel to take a plant from the garden and confine it to the limits of a flower-pot, as although there is, of course, a great difference between a plant and a bird, yet both are readily adaptable to changed environment. We must, above all, beware of adopting—as my opponents have adopted—the schoolboy whine, "Please, sir, it wasn't me; it was the pheasant slaughterer," lest our enemies arrive, with perfect justice, at the conclusion that we are not capable of defending our position. I trust it will not be necessary for me to again trouble you on this matter.

A. R. COE.

SIR,—I should like to see a few more letters *re* the above. Something surely could be done. The Cage Bird Fancy must be strong enough to make itself heard. I cannot see why "Politics" should be brought into the matter. Why should Mr. Coe mention "Socialism"? I never asked for it. I merely stated facts. I speak of people as I know them to be, and I know very well these County Councils, or most of them, are dominated by gentlemen interested in game preservation. You will find a good many of these prejudiced against bird-catching. What is wanted is a revised Act of Parliament, one that properly gives protection to our birds, and at the same time recognises the people's (or public) right to take a just proportion of these birds. As regards rare species, these, of course, need extra legislation; but is it ever enforced? How often can you read: "A fine specimen of the —— was shot near the —— etc., etc." How many Hawks, Owls, Magpies, Jays, rare and otherwise, are protected species in some counties? Are these shot by gamekeepers, employed by the very men who make the protection laws? This is not just, nor is it bird protection. Now, fanciers, another election will soon be here: why not approach your candidates when they canvass you and state what you want? In addition, why should not all societies after the election appeal to their new members? It's no good to let it drop and go to sleep again. Things look rather cloudy for at least the British Bird section. Prejudice seems growing against it. This is only through ignorance in many cases; but it is just as dangerous. Only in this week's CAGE BIRDS, under the heading "In the Courts," the Chairman said that catching birds was "a lazy way of getting a living." Which way does that point? Mind you, I am not defending the catching of birds in the close season; that should be "sat on" severely. Surely such birds as Linnets, Goldfinches, Bullfinches—and I may say all our British Finches—are in no danger of extinction. The Goldfinch never was so common as the Linnet, nor can he ever be expected to be; and it would be rather bad for fruit-growers if the Bullfinch was any commoner. What a pity so many are shot—simply wilful waste of beauteous life. The season governs bird life, not bird-catchers. It is also influenced greatly by the changes going on, such as immense building operations, gradual draining of fens, the laying down of arable land to grass for fox-hunting, etc. Every little helps.

C. ELKERTON.

Special Prizes at Dunfermline Show.

SIR,—I sent a good entry to Dunfermline Show at the New Year, and amongst my winners my Missel Thrush stood first and special, namely, 5s. for best bird in classes 131 and 132. I wrote the secretary about a month after the show, and I have written him twice since that, but without result. It is with great reluctance that I am forced to write to the Press, but the least the secretary could have done was to have given an answer to some of my letters (which I am entitled to). I hope this may catch the eye of some wide-awake committeeman of Dunfermline Show.

JOHN HUTCHISON.

Recipe for Red Varnish Wanted.

SIR,—Will you ask one of my fellow readers if they will tell me how to make a good red varnish? I have only been reading CAGE BIRDS since January, and find it a grand paper for all bird men.

NEW READER.

A Seed-Crushing Machine with Grooved Rollers.

SIR,—Can any reader inform me where I can purchase a seed-crushing machine, which can be adjusted by thumbscrew to crush any size of seed? I have seen such a machine, which had a grooved roller, and which was very effective. I have tried nearly all of those advertising birdroom requisites in your valuable paper, but up till now my quest has been unsuccessful.

SEED-CRUSHER.

A Puzzle Bird.

SIR,—A friend of mine caught a bird here (Lurgan) about three months ago, which I would like to know something about. Some of your readers no doubt by this description of him may be able to name him. Size about that of a Blackbird; glossy black, like a Crow; eyes, tail, and feet black, also bill. He hops when on the ground, eats mostly Canary seed and sings like a Robin. He is in very good health and occasionally stretches his neck and gives a little caw like a Crow. If any reader can name this bird, I should like to know what is its best food or other treatment.

DAVID PEDLOW.

Annual Outing of the National British Bird and Mule Club.

SIR,—The annual outing of the N.B.B. and M.C. is fixed for Saturday, May 28th, the rendezvous being Effingham, Surrey. Arrangements have been made with an old ex-keeper to mark all nests he may find and pilot the party round. Given fine weather, this should prove one of the most enjoyable outings the club have ever had. The morning party leaves Waterloo by the 9.20 train, and the afternoon party by the 1.37 train, all persons taking their own tickets for Effingham Junction, the fare being about 2s. return. A hearty invitation is extended to all fanciers and friends who would like to join us, but I must have all names in (stating which party they go with) by May 24th, so that arrangements can be made for refreshments; being such an isolated place, three days' notice must be given to the caterer.

J. P. CARR, joint hon. sec.

YOU WANT A GAY GARDEN?

Of course you do. You can have it by planting Strong Plants of Best Quality. These are what Harry Barker sells.

A New Cage Bird Society for Horwich and District.

SIR,—A goodly number met together on April 28th, at the Black Bull Hotel, where we decided to form the above-named club. There will be a meeting on Saturday, May 7th, at 2.30, when all local fanciers interested in the cage bird fancy are asked to attend to place the club in proper working order.

JAMES HATTON, T. RAWLING, Hon. Secs.

A "Homing" Linnet.

SIR,—I have had rather an extraordinary thing happen. I bought three Linnets off Mr. Garner (of Chalton Street, Euston Road, N.W.), at Easter, and having my sister up here from the country, I gave her one, which she took back to Monkton, near Dorchester. They thought this bird seemed as if he wanted to get out of the cage, so they let it go, but it returned a week later, and they have kept it. I thought this a very peculiar thing. The bird evidently knows when he has a good home! J. FEAST.

The Problem of the Foul-marked Yorkshire.

SIR,—In regard to the question of extra classes for Foul-marked Yorkshires, I should like to suggest that foul-marked ones be allowed to compete in the same classes as the good-marked ones, classes for which are already provided. As the markings count in these classes, the foul-marked birds would only stand a remote chance. Also to provide *extra* classes for the foul-marked birds, and allow the better-marked ones also to compete in these classes, the markings having *no value* whatever. This would do away with the marking difficulty altogether, as it is very difficult in the case of variegated birds saying where a foul one begins.

F. ELLIS.

The Proposed Open Show for Glasgow.

SIR,—To those who take an interest in the Cage Bird Fancy in and around Glasgow, I wish to point out that at the meeting held recently it was decided to form an association, on the motion of a bird dealer. I may state that should dealers be allowed membership or allowed to compete at the show, it might be the means of quite a lot of genuine fanciers not having anything to do with the above. Wake up, ye fanciers! and assert yourselves. Why be led like a lamb by dealers? The only point in view they have is a monetary one. Why not hold the meetings on a Saturday, as the majority of fanciers are working men, who can ill-afford to lose a morning off their work? If this body of fanciers would approach the City of Glasgow O.A. as to holding a show on 3rd and 4th January, 1911, I think their application would be carefully considered. The membership fee is only 2s. 6d. Why not join this wealthy society and give your views on other important business that is connected with our hobby?

DELEGATE.

Specials at Glencraig Show.

SIR,—In reply to your correspondent "An Exhibitor," re specials at Glencraig Show, I am very sorry he has had to write to your paper about it, but I expect by the time his letter was being printed in CAGE BIRDS he would have had his special; and I can assure him that it was sent away at my earliest after I received it, along with some others. I may state, too, that the specials have been in the hands of one of our late officials since shortly after the show, and some of them before the show. But the committee were not aware that they had not been paid over till about a fortnight before the notice appeared in CAGE BIRDS. I may state that he has still another special in his possession that we are aware of, but perhaps the unfortunate exhibitor who won it will write to him about it himself, as we have spoken to him several times and he has not handed it over. It is ¼lb. of tea won by Mr. Jas. Simpson. There are two others we are aware of to be paid yet. One is of 3s. value won by Mr. Gentleman, Avonbridge, but it has not come from the donor yet. The other is the points special in the Norwich section, but we are not sure who won this, as the said late official lost the book he had the specials on; but I am communicating with the judge and will let the winner have it at my earliest. Should there be any more who have specials to come, will they let me know? We intend to pay everyone out of the funds of the society. We trust that "An Exhibitor" and the other exhibitors who have had to wait so long will let us have their support at our next fixture. I assure them that they will have our best attention, for the committee for the ensuing season are sound fanciers, and we are in a good financial position, with a membership of close on fifty and more joining every meeting. With the support we get from the shopkeepers and gentlemen in the district we should have one of the best shows in the county.

JOHN BROWN, Hon. Sec.,
Lochore and Glencraig F.A.

The New Cage Bird Society for Portsmouth and District.

SIR,—Our meeting resulted in about 30 being present. A. Newbury, Esq., was elected chairman, and the proposal to form a society was carried. I was elected secretary (*pro tem.*). Three members were appointed to draw up rules and submit same at next meeting on May 25th, at 8 p.m. Same address as before.

W. R. KING,
200, Kingston Road, Portsmouth.

The Battersea C.B.A. Open Show

SIR,—In running through "Twitterings," in your last issue, I was very sorry to read that the Battersea Open C.B.A. had engaged only two judges again, the same as last year. I think that with a show of this size (nearly 800 entries) they could very well afford three judges for the benefit of both exhibitors and visitors. The time for opening last year's show was about 3 o'clock, but the judges were still at their work until well in the evening. Then, again, owing to the judges finishing so late, the catalogues with the awards were not to be obtained until (I think) about 9 o'clock. This gives no time to the visitor who has travelled a long distance and has to leave fairly early to catch his train. I, for one, went round the show once or twice without a catalogue (I never buy one without the awards), and when they did arrive I just had time to buy one and go home. I think under these conditions half the beauty of a show is lost. If there are any other fanciers of the same opinion as myself, perhaps they will give their views, so that we can in a friendly way point out to the said society something to their future benefit. Wishing the Battersea Open C.B.A. every success at their next show,

"VISITOR."

The Northern Lizard Canary Club.

SIR,—A meeting of the Northern fanciers of the Lizard Canary was held on April 30th, the object being to form a specialist club to look after the interests of the variety, and to endeavour to bring the bird into more popular favour amongst fanciers. The meeting was held in the clubroom of the Sunderland Society, kindly loaned for the occasion, and was attended by a fairly good muster of fanciers. Mr. W. Reid briefly outlined the position of Northern Lizard fanciers, and pointed out the necessity of having a specialist club, and then read the correspondence he had received upon the subject. It was then unanimously decided that the club be formed and that it be known as the Northern Lizard Canary Club, the principal reason for confining it to the North being that we did not wish to interfere in any way with the work of the Lancashire and Lizard F.A., as we are most desirous of working in harmony with that club. The following officers were elected unanimously: President, Mr. J. Keenlyside; Vice-Presidents, Messrs. J. Farrar, T. C. Crawhall, P. Hunter, W. F. Swan, and Dr. C. D. O'Neal. It was decided that a new chairman be elected at each meeting, so that one member will not always be in the same position. Mr. W. Reid intimated some time ago that he did not wish to be elected as secretary, and that he only took the duties pro tem. in order to get the club formed, and that when it was once formed they would have to elect another secretary. He proposed that Mr. R. H. Dixon (Houghton) be elected secretary. Mr. Dixon declined on the ground that he was too far out of the district. Mr. Reid then proposed Mr. J. Joffrey, who stated that he would be unable to accept owing to business reasons. Mr. Jeffrey then proposed that Mr. G. Davidson be elected secretary. Mr. Reid seconded, and on this being put to the meeting, Mr. Davidson was unanimously elected as secretary and treasurer. The committee was then formed as follows: Messrs. W. Reid, J. Hyslop, R. H. Dixon, R. Haswell, J. Jeffrey, M. Dixon, H. Fenwick, J. Riseborough, and A. Walker. It was decided that our meetings be held monthly, and that the Sunderland Society be asked for the use of their room in which to hold the meetings. The annual subscription was fixed at 2s. 6d., and the secretary and treasurer, Mr. G. Davidson, 10, The Royalty, Sunderland, would be very pleased to hear from any fancier who would like to join us. The club will accept as members any fanciers residing in Durham, Northumberland, Westmoreland, Cumberland, and the whole of the Scottish Counties. It was decided to ask societies to put on at least two classes for Lizards, and we will do our very best to fill them. Regarding the specials to be competed for, Mr. G. Davidson intimated that he would present an "easy chair" for one, and Mr. Reid promised to try and obtain a cup or medal, to be competed for by the members, to be won outright. The club now being an established fact, I have no doubt as to its future success. The secretary is a very enthusiastic Lizard fancier, and I trust members will give him whole-hearted support.

W. REID.

A Recipe for a Washable Distemper.

SIR,—I have read with interest in this week's CAGE BIRDS, "A Recipe for a Washable Distemper," signed, Miss M. Latham. I should like to ask this lady if she has herself tried this recipe, and if so, whether she used concentrated size in powder, or jelly size, as her recipe does not say which. This is misleading to amateurs. I should like to point out that over 90 per cent. of your readers will take it to mean size powder, as there are few towns or cities where they can buy size in jelly. As a practical house, etc., painter, I must in fairness to your readers advise them to wait further particulars from Miss M. Latham; or they may regret their experience in making, or trying to make, the washable distemper. Let me advise them to go to a reliable painter or a paint stores, and get either Duresco or Walpamur, which are both water paints and washable (in paste form), or in dry powder, to get either "Phasantite," or Hall's Sanitary Distemper. I use Duresco in paste form, and Phasantite in dry powder, put up in 5lb. packets for 1s. 8d. per packet.

JOHN ENGLAND.

Nets and the Making of Nets.

SIR,—In reference to the net sent to "Netter," I was surprised to see that he was disappointed; he was looking for something that was difficult to do. The net, as he says, is simple, but it was not the making of the net that I asked about, but the time it would take him to make one like it; and as "Netter" is willing to make one like it, I will send the material required, on condition that the net is sent to me to look at, together with a statement as to how long it took him to do it. I will then return it. I should also be pleased to receive any net that "Netter" is pleased to send, as there might be something to learn, and I am not too old for that. But at the same time I think I could make a net of any kind from a sample. I hope "Netter" will take no offence, as I should not wish to give any; but he talks about something difficult. I am willing to send "Netter" a net that I think he cannot make, made by myself. It is a model of a fishing net, and as he has been making nets for fishermen he should be able to get a little information, if he should require it. Of course, this net is a model of a net fixed for use, but it is only the net I am referring to, which weighs 3 lbs. net and fixings. I am willing to find material and make "Netter" a present of £2 (two pounds) if the net he makes is the same as sample. I never doubted "Netter's" ability to make different kinds of net; I have only disputed the number of knots he says he can tie in the hour. I still say it is impossible for any netter to tie 1,500 ¾ in. mesh in one hour by hand, as I have had between 200 and 300 netters under my charge for years, and have at the present time; so I should know what I am talking about. I am willing to give any information regarding round nets, square nets, or diamond nets to anyone requiring such through the medium of your paper.

W. CONNELL.

[We have received a ball of netting cord, etc., from our correspondent, which we have duly forwarded to "Netter."]

The Type of the Lancashire Canary.

SIR,—When I opened your valuable paper CAGE BIRDS I was not at all surprised to see the self-styled crank, Mr. Fuller, again on the warpath, as I had been rightly informed beforehand that after his "barney" with Messrs. House, Rukin and Baker, it was now my turn to be numbered amongst the slain. Before dealing with his remarkable charges, and having followed closely all the correspondence re "The Type of the Lancashire," I cannot help noticing that his chief characteristic is to try and "slate" all who are directly opposed to his views, instead of trying to gain the confidence of exhibitors to show under him by seeking to prove to the Fancy that he is qualified to fulfil the high position that the Lancashire and Lizard F.A. have thought fit to place him in. So, to use Mr. Baker's words, "The Blustering Crank" thinks fit to have a cut in at me, because he thinks that I am implicated in the letter signed "Lizard," but at the outset I might add that I am going to play him at his own game and use his own admissions against him. I should like readers to particularly notice his admissions, which appeared in the last issue of CAGE BIRDS, in reply to Mr. Baker's letter of the previous issue. He made these startling admissions: That he has no character—had never had one—and this in addition to being both cracked and cranky. A fine thing that to acknowledge to the intelligent body of gentlemen that he charges me with insulting. Now let me come back to the reply of the "Lizard." This blustering, characterless, cracked, and cranky judge (all his own adjectives) bursts forth by insinuating that I wrote the letter signed "Lizard." Well, sir, if he thinks so, let him think so, as I don't intend enlightening him on the matter, but as he adjusts the cap, which, by the way, fits him so perfectly, I for one have not the least objection to his wearing it. Neither do I intend taking it from him. Then he says I have insulted the intelligent members of the L. and L.F.A., a body of gentlemen to which I have the honour to belong. But as a word to the wise is sufficient, I should like to appeal to the intelligent members of the L. and L.F.A. not to confirm the minutes of the last meeting until they have removed judges of this description out of the road; otherwise I think they as a body will be wanting in intelligence, and will be laying themselves open to severe criticism. So much for the L. and L.F.A. Mr. Fuller flares away again by telling the Fancy that it is very well known in Glossop that I entered the L. and L.F.A. for the purpose of winning the novice medal. Now, Mr. Judge, be a man and come out in your true colours and prevent me from winning the novice medal, as I don't consider yet that you are a fully qualified Lizard exhibitor, let alone a specialist judge of the variety, and I fail to find any proof of your ever having won any first prize in open competition either with Lancashires or Lizards. In reference to my staying long enough in the Fancy, I might tell you that if my career is as unsuccessful as I know yours to be as a fancier, you need not doubt at all, as I shall very soon clear out of it. Before I conclude I must remind this characterless, cracked and cranky selected specialist judge that before he condemns anybody in the future for doing anything against the laws of societies and the C.B.U., he should purify himself and his environments also, and instead of extending the hand of forgiveness to young fanciers, pray for forgiveness from the old fanciers.

EDWARD THOMPSON.

Glosson.

The Cage Bird Fancy in Belfast.

SIR,—It has often occurred to me that the Fancy here in Belfast requires awakening. I don't know of a city of similar size in the United Kingdom where cage bird men are so somnolent and behind the times. I have heard of Englishmen and Scotchmen say they have been in the city for years before being aware that a club was in existence. This surely must be a sign of lukewarmness in those delegated to carry on the affairs of the society, or in the members themselves. Which? We have two young bird clubs in Belfast. Some years ago there were three—two of these were confined to Scotch Fancy and Belgian Canaries, but amalgamated a couple or three years ago. But judging from present-day observation it does not seem to have advanced the position of these breeds at all in Belfast. The other club is devoted to the breeding of Crests, Norwich, Plainheads, and Yorkshires. Each of these clubs holds a members' show of young birds in November of each year. But from then to the following November the clubs might as well be defunct; certainly they have their monthly meetings, but each night is mostly a repetition of the preceding one except when the usual time comes round to appoint their judge and make their classes. Why cannot they hold nest feather shows, matched pairs, etc., as certainly the yearly subscription is high enough, being 10s., with an additional 2s. entrance fee. This, in my opinion, is another great objection, and is the reason, I would say, why the membership keeps on the small side. Belfast ought to be able to have a club with anything from 100 members upwards, if the subscription were made within the means of every working-man fancier, both exhibiting and non-exhibiting. Again one never hears a lecture first hand, and there are fanciers here who have been breeding and showing I suppose for the past twenty years or more, and should be in a position to give us some hints as to how to breed and rear champions. Then, again, there is never a washing or a judging competition, nothing in fact which one could enthuse over. What I want to see is more life thrown into the Fancy in Belfast. If not they will wake up some day to find their hobby lost to them, as for a number of years past the open shows held here have been financial failures, and seem like continuing so, unless a greater effort is made than has been made in the past. I hope to hear some other opinions on this matter.

J. BARCLAY.

Rings Charming Gold Engagement Rings from 7/6, with full guarantee of quality. Supplied for 2/6 and Easy Monthly Payments. Write for Catalogue B—contains Rings, Watches, Chains, Lovely Jewellery, Clocks, Plate, &c., &c. Easy Instalments or 2/- in the £ Cash Discount. J.G. **GRAVES** Ltd Jewellery Dept., Sheffield

The Future of the Cage Bird Union.

What is it to be? Some Opinions from Our Readers.

SIR,—In reply to "A Delegate," I did not state that any complaint of mine had appeared in the papers. I merely stated that "A Delegate's" statement was incorrect in every detail. My communications have always been addressed to the Secretary of the Cage Bird Union, and whether on London and Provincial O.S. notepaper or on the notepaper provided by the hotels I stay at, I certainly thought that any communication from myself would have been accepted as from the L. and P.O.S., whom I represented.

J. W. RAMSDEN.

SIR,—Just a line to ask you to announce that I accept the post of secretary to the Union. I appeal for the hearty support and co-operation of all societies and fanciers who are agreed a Union is a means of doing good in the Fancy. The position promises to be somewhat difficult, as I find that though many have sent on their subscriptions, and only some nine or ten have notified their withdrawal, a great number of societies have not renewed their membership, and I would urge these to forward their instalment of 5s. as early as possible. Without a very substantial number of societies affiliated to the Union, it cannot be very effective, and considering the subscription only amounts to twopence a year to each member, the monetary consideration is trifling compared to the good that has already accrued through the Union. I would also be glad to hear from any fanciers and societies, whether they have withdrawn from the Union or not, with their views and suggestions on the present conditions, with the object of establishing the Union on a better footing. My address now is 76, Shrewsbury Street, Old Trafford, Manchester.

GEO. W. F. LYTHGOE.

SIR,—I cannot agree with Mr. Crawhall when he says "Neither your article nor all the letters in last week's issue throw any light on the subject." I think we are indebted to you, Sir, for the introduction of the subject, and the able article, with opinions from your readers, will be a great help in discovering the cause of the falling off of support. As Mr. Downing says, "let us probe the thing to the bottom," and help to find a remedy. In the North, here, there has always been a certain amount of opposition to the Cage Bird Union. Some men have never changed their minds at all, and do not want to be ruled. They are the first cause of disaffection. Seizing upon every available opportunity to bring discredit on the Union, they have at last been successful in severing the Northern societies. Their first cry was, "Are we to be coerced? Are we to lose our freedom?" I have always contended that this Rule 22 was necessary, because to be a real Union we must all join. To all those who wished to obey the rules there was no coercion, but to those who wished to offend it was an obstacle; and that was one of the chief objects for which the Union was formed to govern the Fancy. The majority, however, were in favour of the rule standing, and the opponents did what harm they could by working from the inside as members and representatives. This accounts for Mr. Crawhall's excessive suspension. He made himself conspicuous as a supporter of the Union. Consequently he got it fairly hot. Instead of appealing to the Executive Council (Mr. Reid is mistaken on this point), and remaining true to his colours, he deserted by resigning from all societies thus doing more harm to the Union than he had ever done good. Now, had Mr. Crawhall appealed I have no doubt it would have been altered. The Executive Council only confirmed the decision of his brother fanciers on Dist. No. 1. This was another cause of friction, and the cry was, "Are we to lose a good member for the sake of this Cage Bird Union?" It came to a vote, and the Newcastle C.B.S. remained affiliated. Then came the trouble about a special, which by a clerical error was wrongly awarded, both on slip and catalogue. The ruling of the Council on this case was the "coup-de-grace," as far as the Newcastle Society was concerned, for we all expected the Council to right the wrong, no matter what the custom had been in the past in similar cases. Confidence in the final court was severely shaken. Then we have opposition from some of our judges, in many ways, passing stained birds, instead of disqualifying, according to Union rule; testing them with heads down in a corner, where the representative had a poor chance to see if anything came off, and then only on the representative insisting. How can fanciers ask, "Why was such a bird not disqualified?" The representative cannot do much unless he has the help of both judges and officials. Judges and officials ought to be dealt with, and required to give explanations of these things. How to remedy matters should now concern every good fancier. Societies should send in their objections, and all obstacles to their becoming members should be removed, as far as possible, with efficiency. The only reasonable objection to joining is, from the individual point of view—"I cannot show where I like." The great thing is to get all the societies to join, and as the smaller societies consider it a hardship to pay a minimum subscription, alter that rule, so that a young society of fifteen members would only pay 2d. per member, instead of 4d., the present subscription. Make it equally 2d. in large and small societies. Delegates should also have more encouragement to attend district meetings, and railway expenses should be shared by the whole district, or meetings should be held consecutively at each town. I would also debar non-union members from showing at Union shows. Those who are not connected with any society could either join one, or, as has been suggested, join the Union at a reduced fee, as an independent member. We are all, or nearly all, of the opinion that a governing body is necessary; so let us join hands, and try to make a Union acceptable to the majority. Hoping the pruning of the branches of the C.B.U. will be the means of causing a stronger and a straighter growth.

T. ROBSON,
Newcastle.

SIR,—It has grieved me to be unable to take any notice of the taunts and false impressions floated in the Fancy Press during these last few months, owing to my being invalid since February 5th. My right arm has been crippled through strain, rheumatism, and displacement in the shoulder (perhaps some of the delegates would notice that I used my left hand instead of my right on a particular occasion). It would appear that the representative who officiated for No. 1 District of the Union has neither friend nor well-wisher, as not one of the delegates has thought it his duty to express an opinion, or to request something definite from the writers who have been so busy destroying my reputation, hidden behind the mask of villainy, while they poured into me the poison of their vile natures. I have not been able to reply to private correspondence and to write to the Press was out of the question. I see Mr. T. C. Crawhall, in this week's issue, states my reply "gave the impression that the decision was not a universal one." When asked how many were present at the council meeting, my answer was that that was a question I did not feel called upon to answer, that members of council must be allowed some discretion on the internal workings, but that I could tell them the decision was unanimous, with the exception of myself, both on the first consideration of the case and on the notice of motion by myself to have the case reopened on behalf of the Newcastle Society. I also told the members that if the case was plainly stated before the Fancy, I believed the council would be upheld, though it was not in accordance with my sense of justice. I also asked the members to accept the decision, and hand the special over. Sir, I am aware it is only my word, and it may not be worth much now, but before Mr. Crawhall can have my full confidence he will require to be more consistent than I have found him since the Union came into existence, and, crippled as I am, I still sincerely proclaim: Long may the Union live and flourish.

56, Hanover St., Liverpool, and 60, Bartholomew Close, London.

SIR,—I would like to point out to Mr. Crawhall that I distinctly stated in my letter that whether the decision of the C.B.U. executive council or the decision of the Newcastle Society was correct had nothing to do with the question at issue, which was that the executive council, the recognised court of appeal, having given its decision, just or unjust, why did they not enforce it, as per Rule 21? Whether the Newcastle society thought the decision of the council was just or unjust, or whether they would rather suffer suspension than carry out the decision of the council, had nothing whatever to do with my question, and I merely quoted this case in order to show the difference in the methods adopted by the C.B.U. when meting out justice, individually and collectively. And personally I think it would have been better had Mr. Crawhall recognised that fact and let the matter rest there, instead of penning a letter which clearly indicates that the Newcastle Society do not intend to abide by the decision of any union if in their opinion these decisions are unjust. This, to my mind, is not as it should be, and upon this point depends the settlement of the question at issue. Newcastle undoubtedly had a perfect right to their own opinion regarding the decision of the council, and they were strong enough to oppose it, and show the Fancy how weak the council could be when opposed by a powerful society. But this does not alter the fact that the executive council were the *recognised court of appeal*, and as such their decisions, just or unjust, were *final*. It would be interesting to know why this particular decision was not enforced, for the council cannot hope to retain the confidence of fanciers if they are afraid to enforce any decisions they have come to simply because it affects a powerful society. I note that one of your correspondents states that the decision *was* enforced. This leads to some very interesting matters with which I will deal later on. We now come to the letter from Mr. T. Johnson, and I am very glad to note that the opinion of a certain gentleman that we northerners were as a rule *non compos mentis*, does not trouble Mr. Johnson very much, and that he thought the writer himself was a "bit balmy," with which I quite agree, and can only add that the poor gentleman who wrote the statement would probably have been all right if he had had his senses. Mr. Johnson appears to have a certain antipathy to Mr. Crawhall; why, I do not know, neither do I care, but he is certainly very wide of the mark when he states that Newcastle seceded from the Union as a protest against the suspension of Mr. Crawhall, and I also very much question his statement that Mr. Crawhall *knew* he was doing wrong when he made his entries at an unlicensed show. You will understand, Mr. Johnson, that I hold no brief for Mr. Crawhall, for personally he is quite unknown to me, and I have never once met him, or even seen him to my knowledge, and I merely mentioned his case as an illustration of how strict the C.B.U. could be when dealing with individual cases. Mr. Johnson thinks that the district committee would have been justified in dealing with Mr. Crawhall even more severely, simply because he was at one time a strong supporter of the C.B.U. This is where Mr. Johnson and I differ, more so in the light of later events, when other Union fanciers openly exhibited their birds at non-Union shows without being punished, although the district committee knew perfectly well what was going on. Doesn't Mr. Johnson think that these exhibitors should have been punished as well, everyone alike, and wouldn't he like to know why they were not punished? It is cases like these that have made the Union a laughing-stock to northern fanciers, and the obvious remedy is that a rule which has been found so utterly unworkable, and so utterly unsuitable to the requirements of the Fancy, should be removed altogether. If fanciers would only take the trouble to enquire they would find that in the great majority of cases those who strongly favour the rule are fanciers who do not exhibit very much, but confine themselves to those shows held by societies of which they happen to be members, so that the rule cannot affect them in any way; but let them get their birds out more freely and then see how they like it. Could anything be more ridiculous than fanciers like these, who never or seldom show a bird, moving or seconding resolutions in favour of a rule which does not concern them in any way. I think that the least they could do would be to leave the rule to be considered by those whom it affects. In this connection I would like to say, sir, that this is the last time I shall write anything concerning Rule 22. Mr. Johnson asks me if the case of a prominent exhibitor of British birds who was suspended for alleged staining was not a harder case than that of Mr. Crawhall. I presume that he is alluding to Mr. S. W. Birchley. I do not know whether or not Mr. Johnson is fully conversant with the facts of this case, but if he is then he must fully realise that his opinion simply supports my statement that the method of dealing out justice adopted by the C.B.U. was very peculiar. I might say that Mr. Birchley stated the whole facts of this case to me in my own bird-room, and from what he told me I quite believe he had nothing whatever to do with the alleged staining of the Linnets; and, further, I do not believe that he knew the bird was stained when he sent it to the show. The one great blot in this case was that here was an *expert* on British birds pleading that he *did not know* the bird was stained, and I am afraid that fact told very strongly against him. I suppose on the assumption that he should have known, being an expert; although, if I remember rightly, Mr. Birchley told me that the bird arrived at his house at night-time, direct from the man he purchased it from, and that he sent it on to the show the same night, and it is quite probable that he never gave a thought to any possibility of the bird being stained. However, Mr. Johnson shares my opinion that the exhibitor was innocent of the charge, and then says: "Still, the C.B.U. did its duty." How, Mr. Johnson? Do you mean that because the C.B.U. punished a man, whether he was guilty or not, that it did its duty? Really, Mr. Johnson, if these are your views, then all I can say is that your powers of perception as to the meaning of right and wrong are very limited indeed. What do you mean by saying that "the Union couldn't get at the seller of the bird, because he hadn't exhibited it." Do you mean to imply that the C.B.U. *knew* that he was the guilty party? If not, why should they want to get at him? And if they *knew* that he *was* guilty why did they punish the other man, and let the principal offender go free; and, further, how could justice have been done? I am afraid, Mr. Johnson, that your statements will, in a certain sense, give fanciers the impression that justice *has* been done, in fact, *done brown*. In regard to "A Delegate's" letter, he makes some very interesting statements, amongst which is one to the effect that "the C.B.U. secretary informed the Newcastle Society that they could not hold their show under C.B.U. rules until they had complied with the decision of the executive council. This ruling they could not accept, and so *resigned*, forestalling the council in any action they might have taken under Rule 21." Now, sir, this statement is, without a doubt, a staggerer, especially in view of the fact that the Newcastle show *was* held under C.B.U. rules, and was also stated as such upon their schedules and catalogues. I knew that the Newcastle delegate had informed the members that they were all liable to suspension if they did not conform with the council's ruling, but it is certainly news to me that the C.B.U. secretary had notified them as above, with the above result. Surely the C.B.U. did not mean the 1910 show. If so, what a farce! If the Union meant the last show, then there has been something seriously wrong somewhere, and it is quite evident that several things need explaining. According to "A Delegate's" letter, the C.B.U. secretary wrote to him in the past tense, so I think we may safely assume that the last show was the one alluded to, and I would be very pleased if "A Delegate" would, for the benefit of other fanciers, answer the following questions: (1) Upon what date did the C.B.U. secretary notify Newcastle that they could not hold their show under C.B.U. rules? (2) Did Newcastle Show appear in the list of C.B.U. shows issued monthly to the Press? If so, why? (3) Were the C.B.U. show rules issued to Newcastle Society for the purposes of their last show? If so, why? (4) Were all affiliated societies notified by the C.B.U. that Newcastle Show would not be held under C.B.U. rules? If not, why not? (5) Upon what date did Newcastle send in their resignation to the C.B.U. secretary? In my last letter I stated that the C.B.U. had done nothing to enforce its decision when opposed by a powerful society, and "A Delegate" states they did. I think that the answers to the above questions will prove who was right and who was wrong. I am sorry that I have to ask the questions, but it is quite evident that both "A Delegate" and myself cannot be right in our assertions. Personally I would like to see this matter settled, for its prolonged discussion only serves to prevent any progress being made in the reformation of the Union upon more business-

HEALTH & STRENGTH

Deals with all kinds of athletics, including, **Football, Wrestling, Boxing, Weight-Lifting, Fencing Running, Ju-Jutsu, Cymnastics** of all kinds, **Swimming, &c., &c.** Gives free advice on all questions of Health, Diet, &c., to all readers.

like lines. It will be quito apparent to everyone that no re-formation can take place until the faults and failings of the present Union have been sought out and entirely eradicated. If fanciers want suggestions, may I suggest that the Editor of CAGE BIRDS selects as many fanciers as he thinks necessary, say 40 or 50, from various parts of the country, men who in his opinion are capable of acting as a board of inquiry, or something of that kind. He can then publish the names of these fanciers in the columns of CAGE BIRDS, together with a voting paper, with the object of allowing all fanciers the opportunity of selecting for themselves a number of fanciers, say 12, who in their opinion would form a suitable body, able to discuss the affairs of the Cage Bird Union. The twelve fanciers receiving the highest number of votes would, of course, be elected, and if any of them declined to stand, or for various reasons were unable to do so, then his place would be taken by the next highest, and so on. A body of fanciers thus elected would be absolutely free from the faintest suspicion of being connected with any "clique," and being elected by the Fancy, and *not self-elected*, they could discuss the affairs of the C.B.U. without fear or favour, knowing perfectly well that the Fancy had every confidence in their sound judgment. Allow the expenses of these fanciers to a central meeting-place to be defrayed from the funds of the C.B.U., and then let them place the result of their deliberations before all societies for their consideration. Of course, sir, this is only a suggestion, and it rests with the Fancy to say whether it is feasible or not. In conclusion, sir, might I mention that "A Delegate" is the only correspondent writing on this subject under a nom-de-plume.

W. REID.

[We regret that we cannot see our way to fall in with Mr. Reid's suggestion.—EDITOR.]

SIR,—The difficulty in the way of getting the Drill Hall has now been removed, so that the next show of the Bristol Fanciers' Association will be held on the dates originally announced, October 26th and 27th next. We have decided to withdraw from the C.B.U. That our decision does not arise from any objection to or fear of a strong governing body is shown by our "association" with the Poultry Club, but we feel the chief reason for the existence of such a body should be the good of the Fancy, and judged from this standpoint the C.B.U., in our opinion, is a failure. Of all the letters in defence of the Union which you have published, perhaps the one which appeals with most force is that written by Mr. Hadwin some weeks ago; and yet, carefully considered, even that advances nothing beyond the idea that societies exist for the Union, rather than the Union for the Fancy. Others have likened the Union to the Poultry Club, and quoted the success of the latter in support of the continuance of the former. There could not be a more hopelessly absurd comparison—the position is much more one of absolute contrast. The Union has been charged with proceeding against individual wrongdoers and defaulting societies only where it could do so without arousing opposition and unpleasantness, and notwithstanding anything that may be said for the nominal objects of the Union, the practical fact remains that at present the Union subordinates everything to compelling fanciers to join under Rule 22. This is remarkably evidenced in the last circular sent out by Mr. Raynes (March 31, 1910). The offence of showing at an unlicensed show is not in itself a breach of moral law, and only becomes a crime because it is created one by the rules of the Union, and this leads to showing in false names and other dodges of which even Union delegates have been accused. Matters such as non-payment of prize-money and fraudulent preparation of exhibits, which are in themselves immoral, have to take a back seat to this one offence of breach of Rule 22. The constitution and method of management of the C.B.U. have up to now been based upon coercion, membership being by indirect affiliation, thus holding the individual who fears to lose the benefits of his local society, and holding the society who fear a loss on their show if deprived of a number of entries. How can such a Union be compared with the Poultry Club? Membership with the latter is direct, and our members are not entitled to all the benefits of the Poultry Club by reason of our connection with it as an "associated society." The management is elected by postal vote. At shows held under Poultry Club rules, all exhibitors, members or otherwise, accept by their entry the jurisdiction of the Poultry Club. Members of the club may show where they like, but on the understanding that the club take no action on their behalf at shows which do not adopt club rules. Where Poultry Club rules are in force, however, the club sees that classes shall not be amalgamated without exhibitors' consent; that so many days' notice of cancellation shall be given; that winners get their prize-money, and in full, too, unless a distinct scale is laid down in schedule; and the club provide if necessary legal assistance to protect their members' rights in these matters. Shows which do not carry out their obligations get placed on a "black list," and have a bad time as far as entries from P.C. members are concerned. Naturally the best societies readily "associate" with the Poultry Club, although there is no compulsion. Should not similar powers satisfy a cage bird governing body? The Poultry Club do not attempt to interfere with the management of societies. They recognise that with so many shows some clashing is inevitable; that no society would deliberately clash with another if it could be avoided; and that local consideration must finally settle this. They have the good sense, therefore, to leave these matters entirely alone. Is it impossible to have a ruling body in the Cage Bird Fancy similarly based on the freedom and good-will of the general body of its members? The pedigree of the present system is coercion by prejudice out of fear. If it is to be mended, the leaders must have courage—the courage that has the confidence to trust to the goodwill of societies and fanciers for support, and not to compel it grudgingly by indirect pressure.

G. T. H. MAGGS, Secretary Bristol, F.A.

Several letters unavoidably held over.

Notes from Erin.

FANCIERS generally are experiencing much disappointment with their breeding stock owing to clear eggs, young dead in shell, and hens failing to feed, etc., which are, no doubt, all due to the unsettled state of the weather and the east winds. Yet a few of the more fortunate fanciers in Dublin, Dundalk, Belfast, Sligo, Larne, Porthwick, Londonderry and Cork have several nests of young doing well.

A RUMOUR is current that a certain Dublin fancier alleges that at the recent Dundalk show the birds were left without seed for some time, and that the cases were roughly handled, or something to that effect. As one of the many exhibitors who attended this show during the two days of the exhibition, I wish to contradict this statement, as to my mind it was one of the best managed shows which I had the pleasure of attending during the season. All the officials worked hard, and treated all exhibits with care and consideration and looked well after their wants.

IT is to be hoped that no further trouble will be caused by disparaging remarks being circulated, as such will not help to further our hobby, and I think show officials generally deserve more consideration and encouragement from us. Certainly, if a committee neglects their duty, the matter should be reported to the proper quarter. But if we are unable to substantiate our charge we should then "for ever hold our peace," and not try, as it were, to stab the officials in the back when they have not the chance of defending themselves. It is very easy to have a bad report circulated, but it takes much "hill climbing" before we can give a contradiction the same wide circulation.

THE Y.C.C. special meeting was held some few days ago to enquire into the financial position of the club. The following members of the committee were in attendance:—Messrs. C. A. O'Reilly, Bray, Dowling, McDonnell, Sholedice, and Mulcahy. A subscription list was started in aid of the club's funds, and was headed by Messrs. Bray and C. O'Reilly with £1 each, and all others present subscribed liberally. It is now to be hoped that all members will follow suit and help their old society which has in the past done good work for the Fancy in Ireland, and still has bright prospects. The hon. secretary and many members are to be congratulated on the way they one and all worked during the time that the cloud hovered over them. The subscription is only 2s. 6d. per annum, and all members and intending members should communicate with the secretary, Mr. Hyland, Fitzroy Avenue, Drumcondra, Dublin.

IT was a pleasant surprise to us to see Mr. Stewart's letter re the Norwich Plainhead Club, in last week's columns of CAGE BIRDS, and we will all be glad that the club is likely to continue and prosper, and hold its usual annual show this season.

WE have yet another show on the list for this season—Bangor, Co. Down. This society was founded some weeks ago, and is officered by real enthusiasts, who are enlisting a great number of recruits into the Fancy in the district. Breeding operations by all accounts are brisk, and we expect to see some new Hybrids from this district on our show benches this year. Come along, Bangor, to the front!

'OUR CANARIES'

A SUMPTUOUS PRODUCTION

32 Coloured Plates, many Art Plates, and Hundreds of Illustrations. Absolutely the finest work on the subject ever issued.

The first number of "OUR CANARIES" is now on sale and can be ordered at any bookstall or from any newsagent. This is designed by the publisher as the standard work on the Canary. The chief note struck in its compilation is thorough practicality. It is a comprehensive, encyclopedic guide to the successful keeping, breeding, and exhibiting of every known variety of the domesticated Canary. *It is written in the simplest of language* and produced on a scale regardless of expense. In size, 8½in. by 11in. Each part consists of 24 pages, two coloured plates and two art plates, and is priced at the remarkably reasonable figure of 6d. net each part, which thus constitutes the very best value that can be obtained for the money.

Thorough and Authoritative.

The well-known Canary expert so long associated with CAGE BIRDS and other journals devoted to the Fancy, Mr. Claude St. John, is responsible in the first instance for the construction and groundwork of the book. It is produced under the joint editorship of Messrs. C. A. House and G. E. Weston, and the number of authorities upon every breed of Canary who are assisting them in the work is legion. Never have so many of the most respected and experienced fanciers of the day joined before in any scheme or work connected with the Canary Fancy, and the following list gives but a small idea of the co-operative and helpful spirit which has met this book right from its inception.

W. Adams, Rochdale; T. Arnot, Hawick; H. W. Battye, Huddersfield; W. P. Barnes, Grantham; Dr. T. A. Bowes, Herne Bay; Henry Bennet, Kelso; J. C. Barnes, Sheffield; J. W. Bruce, Coldstream; J. Bailey, Bradford, W. Bowyer, Leek; D. Black, Govan; J. Broadley, Shipley; A. E. Brooks, Cambridge; Levi Butterworth, Rochdale; B. Clegg, Manchester; J. S. Clarke, Woodford Green; G. Colledge, Derby; G. W. Cuthbertson, Heighington; W. B. Cobb, Leeds; J. Connerton, Carlisle; A. G. Cameron, Kelso; P. Clayton, Halifax; J. Dixon, Bedlington Station; J. Dewsnap, Glossop; J. F. Dewar, Edinburgh; V. H. Deacon, Liverpool; Rev. D. Dickson, Lowestoft; W. Dormer, Rishton; Evins Brothers, Exeter; A. G. Filby, Ealing; John Fairley, Coatbridge; E. Fitton, Oldham; G. Gardner, London; W. E. Greeves, Wrentham; J. Garner, Hazel Grove; Mrs. W. Haysom, Southampton; Hopper Brothers, Keswick; R. E. Helliwell, Halifax; J. Houghton, Gloucester; S. Hadwin, Liverpool; J. and J. Hopkins, Bolton; Albert Hirst, Accrington; J. Hampshire, Oldham; T. R. Ind, Bristol; R. G. Joliffe, Glasgow; T. J. King, Cheltenham; G. C. Ley, Nottingham; James Little, Newcastle; E. Lowe, Oldham; C. J. Mulligan, Sligo; W. Minty, Frome; T. H. Melhuish, Cardiff; J. W. Metcalfe, Liverpool; John McLennan, Edinburgh; H. Mills, Northampton; J. Mackley, Norwich; D. Mallinson, Huddersfield; H. McClure, Glasgow; W. Mundell, Bradford; G. Meekley, Carlisle; Ogden Brothers, Bradford; J. Overend, Ravensthorpe; C. A. O'Reilly, Dublin; J. H. Payne, Gloucester; E. Pretty, London; J. Patterson, Chirnside; A. Porteous, Glasgow; John Pringle, Selkirk; R. Rhodes, Nottingham; J. W. Ramsden, London; J. Robertson, High Harrington; W. Radmore, Plymouth; J. Rukin, Rawtenstall; C. E. Silk, Emsworth; W. Shakespeare, London; W. Spillman, Devonport; T. Smith, Glasgow; J. H. Scothern, Nottingham; R. Sutcliffe, Shipley; John Trengove, Rishton; W. Thornton, Edinburgh; J. S. Wilson, Workington; H. Wright, Norwich; C. I. Young, Frome; and other prominent fanciers.

Wonderfully Accurate Illustrations.

The coloured plates in Part 1 include a most interesting group of the wild Canary and its domesticated descendants—the Yorkshire, the Lancashire, the Scotch Fancy, the Belgian, the Frill, the Roller, the Norwich, the London Fancy, the Cinnamon, the Border Fancy, the Crest, the Lizard. There is also one of the most perfect pictures of an unflighted yellow Yorkshire ever produced even from the office of CAGE BIRDS. We may mention, incidentally, that *all the plates and illustrations in colour, wash and line are from the expert brush and pen of Mr. H. Norman*, artist in chief to CAGE BIRDS. Mr. Norman is remarkably fortunate in being able to catch the correct position and type of every Canary, judging it from the fanciers' standpoint, and he is able to blend with this technical knowledge and skill no small measure of artistic merit. His black and white drawings in Part I include a diagram setting forth in detail all the technical points of a bird, a most interesting group of old-time prize-winning Norwich Plainheads, a modern exhibition Norwich Plainhead, and various appliances for the bird-room.

The literary matter in Part I is mainly historical, but a most practical and fascinating chapter on cages, appliances and indoor management deals very thoroughly with every known variety of cage.

Information Clearly Conveyed.

Very slight examination of the scope of this work will show that it is designed on a scale of magnitude and completeness hitherto undreamt of. The publishers do not attempt the impossible task of making a really standard work, and at the same time covering the whole field of cage bird keeping. All the authors and writers concerned in its compilation deal solely with Canaries and treat that one subject in the most exhaustive and painstaking manner possible. Every detail in connection with the successful management of each variety is dealt with thoroughly and by specialists upon that variety. *The result of many years experience by all the most practical and successful breeders of the day is put into concrete form in language that is always easily understood.* There have been and are works in circulation dealing with such subjects whose compilers seem to have the notion that it is necessary to be incomprehensible or difficult to understand in order to be scientific. Purchasers of "OUR CANARIES" will not find its pages filled with all kinds of mysterious algebraic formula, little better than so much Greek to the average fancier, and unintelligible to all but a select few. "OUR CANARIES" is a work *packed full from cover to cover with useful hints* and methods, simply stated, calculated to lead you to success. It will not show you Mr. Jones or Mr. Brown standing in his bird-room with his chest thrown out and his hand on his heart. But it will show you the correct type of exhibition Canary in every variety, and it will give you more information in one part than you apparently will be able to obtain elsewhere in eighteen.

Owing to the excessive postage on each of the numbers we are unable to supply Part 1 through the post at less than 7d. per part, but each part will be carefully packed flat in card, and the whole work can be sent post free on subscription for 10s. 0d. prepaid. Suitable and handsome covers for binding will be issued at the completion of the work.

The Standard Work on Hybrids.

Uniform with "OUR CANARIES" is "CAGE BIRD HYBRIDS," by Mr. Charles Houlton. This will be completed in eight monthly parts, and published alternately with "OUR CANARIES." This work, the finest and completest on the subject, will contain full directions for the selection, breeding, exhibition and general management of Canary Mules and British bird hybrids. Again, the *one subject will be dealt with thoroughly*, and as much in detail as possible, and all the illustrations will be from the brush of Mr. Norman. Of particular merit are the paintings of the Greenfinch-Bullfinch Hybrid and the Linnet-Bullfinch Hybrid, given away with the first number. We most earnestly advise devotees of the cult of Hybrid breeding to place their order at once for a copy of this gigantic and invaluable work to be sent them monthly. Price, post free, of each part of "CAGE BIRD HYBRIDS" will be 7d. The sales so far have been much larger than we anticipated, and very gratifying to all concerned in the production.

Each part is beautifully printed, and the work on the whole bids fair to create a tremendous sensation amongst cage bird keepers all over the world. Orders have been received for both sections of the production from Russia, Japan, New Zealand, North and South America, Germany, France, Italy, Turkey, and India.

Goldfinch and Linnet Mule Breeding for Exhibition Purposes.

By ADAM WHILLIS.

(Concluded from page 374).

But keep your eye on the Finch, as he will soon let you know what he is going to do. Of course, don't expect too much from him, although I have seen one feed the young in the nest, but that was the only one I ever saw do it. If, on the other hand, he is inclined to be rough, run him out immediately you have seen them pair, then just let him be in when you are in the room beside them. Of course, you will have given them a clean nest at the other end of the cage, which some hens take to very readily, while others will insist on going to the old one in whatever position it happens to be.

Remove the eggs as they are laid, as you have both the young and the Finch to guard against now. When she has laid her third egg, remove the Finch into a single cage and place him against number two hen; and next put your wired slide in between the hen and her young, if that has not already been done, as both she and the cock will incubate and feed the young through the wires. On the other hand, if the hen has been inclined to pluck her young for the purposes of building her second nest, I put the young into a nursery cage, which I hang in front of the breeding cage door; I hang it low down so that the hen cannot easily reach them while they are roosting, but so that, when they stand, she can feed them freely.

When the Young Arrive.

Now, if every thing has gone on alright, we should have Mules in a few days, and we are anxious and wondering what they will be like. Will there be any light ones? The day arrives for them to hatch; the fancier goes to his bird-room and finds the hen is off the nest, and he goes quietly up to the cage; and his heart beats as he looks into the nest. But Oh, what a surprise! Three young hatched, and all as light as Canaries. High glee for that fancier—light Mules the first time of asking. I call that disappointment number one. Go and look into a Greenfinch's nest and you will see the same white fluff on the young; watch how they grow and feather, and you will get downhearted. The young are on the sticks now. A friend comes in to have a look at them. He eyes them and asks where have you got the Linnets? You tell him they are Mules. His reply will be, "I thought they were light ones?"

There is one thing about them—they grow quickly and soon fend for themselves. Run them off the same as you do the young Canaries with the slide down and give egg-food, crushed hemp seed, and soaked rape in separate jars until the birds begin to crack Canary seed for themselves. Then wean them off the egg-food and hemp seed by degrees.

Your other hens have been doing their best with varied success, some not hatching, some of them perhaps rearing a full nest for you of the same sort as the first lot, and others not rearing any at all. The last-mentioned are dubbed "bad feeders" at times, when it is the fancier who is really at fault for bad management. I know a few fanciers who want their birds to do everything they would have them do, just as if they were working some machine. If they would only study the ways of the individual hens, and note what they feed best on, there would be fewer bad feeding hens.

"Up Goes the Fever."

But we will now be getting on, as it were, with the second round of Mules, and the last round for the season. We are not so anxious now. Some have been hatched for over a week, and we have not seen them yet. This or that hen is off, however, and we will have a look. Hallo! a surprise, but this time on the right side. Two heavy variegated ones, and one nearly even marked. Up goes the fever now, with a jump. The young are watched with care, and certainly they should be, but don't forget to look after the young Canaries you had of this hen, and the old hen also, as they are the birds you have to form your Muling strain from.

Now comes the moulting time. Try and not let your birds be long in the moult, as the quicker they are in getting through the better they look. Give them plain Canary in the seed-box, and a little egg-food sprinkled with maw soed twice a week. On the days you do not give the egg-food give them a little rape seed or a little linseed, with hemp or some shepherd's purse, or any of the many flowering grasses which are plentiful at this season, and help greatly to a successful moult. This is also the time to make a "job" of your Muling Finches and Linnets, as food is in abundance just now, both for present use and for storing for the winter months, such as hemp, thistle heads, and horse knots, and lots of other seed heads of which I don't know the names.

Where the Linnet Differs.

The Linnet, in my opinion, cannot be treated for breeding in the same way as the Goldfinch, in one respect, at any rate—he cannot, like the Finch, be run with two or more hens. At least, that has been my experience in most cases. You might get a chance bird to be an exception to the rule, but most of them, if paired to a hen and then taken away from her, either mope or, if introduced to another hen, are very "rough" on her; and when that occurs there is not much chance of success. So that I pair the Linnet to one hen for the season, of course running him out into the other end of the cage after the hen has laid her third egg, and letting him go in with her again when the young are about a week old. Linnets are generally as good feeders as most cock Canaries, and so help the hen; thus he is better than the Goldfinch in that way.

Now perhaps you are going to "try your hand" at the local show as an exhibitor, with the even mark you have got? There will be a chance for you there, as the class will be for "Mules, any variety," and the most of them, if not all, will be dark ones. See you have your show cage nice and clean, and as plain as possible in all its fittings; have your bird, too, in good condition, and clean. I know you will be in high hopes if it is your first venture, but what of the Sparrow-like ones you sold? Perhaps one of them may turn up a "bouncing" buff or yellow, and beat your even-mark, as yours may be only a hen with poor colour and little or no blaze to speak of. That will be another disappointment. But don't turn back now that you have put your foot on to the first step of the ladder; but go ahead, and you are sure to succeed, for as President Roosevelt says, "we all learn by our mistakes." And don't forget that your Mules change after the moult.

CITY AND SUBURBAN A.C.B.

The "Canary Birds" have their Revenge on the "Early Birds."

For the past two years, at the annual cricket match, the cricketing members of the City and Suburban A.C.B. have acted the part of the proverbial worm for those merry gentlemen who comprise the "Early Birds C.C.," and play our summer pastime so skilfully—in other words, the Cityites have been badly "chewed up." But revenge came their way last Saturday (April 30th), when the "Canary Birds" (as the City team has come to be known) dropped their opponents into a bad "cross moult," defeating them by no less than 46 runs. There was a rare outburst of song from the City supporters as the last of the "Early Birds" was bowled neck and crop off his perch. Evidently the Early-ones are not yet up in condition, whereas the "Canary Birds" bore evidence of careful training upon hemp-seed and egg-bread. The batting of Mr. A. Pooley (55) was very clever and effective, while the bowling of Messrs. J. Pooley (4 for 18) and W. Saunders (5 for 30) was deadly in the extreme. The fielding was also good, Mr. Curtis, junr., and Mr. F. Prior (as stumper) specially distinguishing themselves. For the losers, only that fine cricketer, Mr. Collier (scoring 26 runs and taking three wickets) did himself justice. Altogether, although the weather conditions were far from ideal, it was a most enjoyable game, and it is a pity we have not more of such matches amongst metropolitan fanciers.

Scores.—The Canary Birds (City and Suburban A.C.B.): J. Pooley, b Collier, 3; F. Prior, b Oston, 8; A. Pooley, lbw, b Togwood, 55; Curtis, junr., b Collier, 2; W. Sanders, b Togwood, 9; C. Prior, c Tombling, b Butt, 2; W. Cottey, b Togwood, 2; H. Hard, run out, 0; F. Bassett, b Collier, 2; B. Pankhurst, c Swift, b Togwood, 1; Merioneth, not out, 1; byes, 9; no balls, 1; total, 95. The Early Birds C.C.: Collier, run out, 26; Tombling, lbw, b Sanders, 9; Butt, b Sanders, 0; Swift, c Curtis, b J. Pooley, 4; Clisby, b Sanders, 2; Sibley, b J. Pooley, 4; Orton, b Sanders, 0; Togwood, b J. Pooley, 0; Hare, b Sanders, 4; Simpson, b J. Pooley, 0; Johnson, not out, 0; leg byes, 1; total, 49.

Under the White Rose.

ANNUAL general meeting of the Yorkshire Canary Club was held April 30th at headquarters, a good number of members attending. The balance-sheet showed that the affairs of the club are in a flourishing condition. The year began with a debit balance, but this has been wiped out, and a little cash remains. This, considering what a large amount the club has given away in prizes, reflects great credit for cheap and efficient working upon the secretary, Mr. John Greaves.

NOW that the Cinnamon and Green Marks have each a club to look after their interests, it falls upon the premier club to see that the clears and ticks are not neglected. A step in this direction was taken on Saturday. During the last season or two there has been a tendency to amalgamate the clears and ticks into one class, and many thought it was high time that the Y.C.C. stipulated, to some extent at least, the classification to be offered at shows where the patronage of the club was given. This was settled very amicably. At all shows clears are to be provided with separate classes, and where the number of classes is not to exceed six, a classification is laid down that will embrace all sub-varieties of the Yorkshire bird, and give all exhibitors a chance in the running

NOVICES were also considered, and a great incentive given to Yorkshire Union members to join the club. A competition is to be provided to run through all Y.U. shows for novice members of the club, who are showing in Y.U. novice classes. Therefore novices will do well to send in their names at once; by joining they will be competing for Y.U. medals and Y.C.C. specials, both at the same time, and it will be worth their while. By thus offering inducements to novice members, the Y.C.C. hopes to tap the great and ever increasing number of aspirants to Canary honours, who last year in the Y.U. book outnumbered the champions by 836 against 356. Truly a wonderful reservoir to draw upon.

THE O.N.P.C. held a committee meeting last Saturday. The principal point was in respect to the passing of the rule at the last general meeting, regarding the prize money at shows where the patronage is given. Then it was decided that the prize money at such shows should not be less than 22s. per class. But the secretary had to report that several societies who hold good shows could not see their way to comply with this rule, and therefore found it impossible to apply. Eventually the committee decided that as this rule would work somewhat harshly and be somewhat prejudicial to the club, it should be referred back to the members, and each be asked to vote upon the question.

"STRAIGHT 'UN."

Have you purchased PART ONE of the Standard Work on Hybrids? IT IS NOW READY, and is Selling fast!

"CAGE BIRD HYBRIDS"

By CHARLES HOULTON.

Associate Editors of the work: G. E. Weston and C. A. House.

Published in 8 Monthly Parts - - SIXPENCE EACH.

Two Coloured and Two Art Plates with each part.

This is not a work whose excellence begins and ends with the superficial attractions of good paper and plenty of half-tone illustrations, but is a standard work, written by an acknowledged expert, and prepared for publication by experts.

It has been designed not from the standpoint of attracting the pence of the general public, but as a soberly, authoritative and carefully practical work, embodying in the simplest and most straightforward language all that there is to be known on this peculiarly difficult and scientific subject.

There are no less than sixteen coloured plates. EACH PLATE IS A PERFECT STUDY OF AN INDIVIDUAL HYBRID—not a pretty group suitable for a children's picture-book, but a plate that shows the correct colour, the correct shape, the present-day type and general characteristics of modern hybrids.

The successful fancier is nothing if not practical, and to achieve success in hybrid breeding it is necessary, above all things, to be practical. The practical man wants a practical book, not a picture book.

It will, we feel sure, be generally conceded that CAGE BIRDS has produced in "Cage Bird Hybrids" a dignified book on a difficult subject—a standard work of the highest merit and a fitting monument of the hybrid breeder's art.

PART I. IS NOW ON SALE CONTAINING TWO MAGNIFICENT COLOURED PLATES—THE GREENFINCH BULLFINCH AND THE LINNET BULLFINCH—AT MOST OF THE LEADING BOOKSTALLS AND NEWS-AGENTS, OR WE CAN SEND IT TO YOU PACKED FLAT IN CARDBOARD POST FREE FOR 7d. P.O.

FOR 4s. 6d. PREPAID WE WILL TAKE ORDERS TO SUPPLY THE COMPLETE WORK (IN PARTS AS PUBLISHED). WRITE OUT YOUR ORDER AND SEND WITH REMITTANCE AT ONCE to:—

"CAGE BIRDS," 154, Fleet Street, London.

How I Breed and Train My Canaries to Sing.

By W. E. EVANS.

It has often been my intention to write my experiences in breeding, rearing and training Roller Canaries chiefly for pleasure, but with an eye for the profits, if any. I have been a bird lover all my life, and have bred a few Canaries each season for several years. In 1908 I went in for Rollers, only to experience indifferent luck in breeding during that season.

Starting Operations.

Early in the following year I went to a well-known advertiser in CAGE BIRDS and bought three cocks and two hens, selecting the birds myself and paying a good price for them. I had seven hens and one cock, kept from my stock of the previous year, so I started operations with the four cocks and nine hens.

My birdroom was formerly a carpenter's shop. The window faces east and extends the whole length of the room, and the breeding cages are arranged on two shelves exactly opposite the window. The advantage of this is that the hens can start feeding as soon as the sun rises; and to enable them to do this I always replenish the supply of egg food after dark, taking care not to disturb the sitting hens. To this early feed I attribute my success in rearing the young birds with so little loss, as it kept them going until I could give them their breakfast later.

Sixty Youngsters.

Everything went well and it seemed as if I could do nothing wrong. All the hens were good feeders and brought up the young birds without the aid of the cocks, which were removed as soon as the hens were set and were not replaced until the youngsters were in the nursery cages. After the second round I stopped all, except the two best pairs, and when these had brought off the third nests I had sixty young birds, and that was quite as many as I could manage.

The training of the young cocks presented a difficulty, as each bird had to have a separate cage, and to buy the necessary number would have been a heavy expense, so I decided to make my own.

I had noticed that the boxes, in which lard is packed by the Americans for export to this country, are well made, not very heavy, and are divided in the centre. Stood on end they form two excellent cages. I bought as many of these as I required, and then consulted the advertising columns of CAGE BIRDS. I wrote to a maker of cage fronts, who supplied me with fronts at 3s. 6d. a dozen, and when they arrived I had the boxes ready, limed inside, stained mahogany outside, and fitted with sand trays. It did not take long to fit the fronts and perches, and I was quite delighted with the results.

The young cocks, as they were picked out, were placed in the cages, which now occupied the shelves previously taken up with the breeding cages. All hens were removed from the room, as were any cocks which developed faulty notes. I purchased a Queck bird-organ also, and as a result my birds have been carefully trained, and possess a very good song. I find they readily pick up the notes of the old birds and those emitted by the organ, and gain some pleasing tours, which they sing freely.

I also fitted blinds to the windows to darken the room, and kept the birds quiet whilst teaching them their song. I consider I have to sell nearly £20 worth of birds, and, with the aid of CAGE BIRDS, I see no reason why I should not do so. Much of my knowledge in breeding, etc., has been gleaned from our excellent paper, "C.B."

A Chat on Foreign Birds.

A Paper read before the North London C.B.A. by Mr. S. Williams, F.Z.S., on April 20.

"A Chat on Foreign Birds" was the subject of a paper read by Mr. S. Williams, F.Z.S., before the members of the North London C.B.A. at their usual monthly meeting held at their headquarters, Public Library, Stoke Newington, on Wednesday, 20th inst. A splendid muster of members turned up on this occasion. As the foreign bird section is not very well patronised at our shows, one of the chief objects of this paper was to prove to our members how simple it was to keep a few foreigners, and also to induce others to take it up. The paper was devoted chiefly to small birds, which could be obtained at a very moderate price, thus coming within reach of the majority of fanciers.

A Goodly Array.

In response to the invitation of our secretary, Mr. Harper, I am pleased, said Mr. Williams, to be here this evening to read you a paper on foreign cage birds. As many of you know, though I exhibit British birds and Mules, it is the foreign section of my hobby that appeals to me most. Some years ago, before I was a member of the North London Society, I visited your annual show, and I must admit I was disappointed when I saw the foreign bird class. If my memory serves me rightly, I think only two members' names appeared in the catalogue, and the number of entries could be counted on the fingers. Now, in a society like ours, you can look around and see a goodly array of Canaries, Mules, and British birds, some of which can go out into the open shows and come back with prize cards in their cages; and we can be justly proud of them. But when it comes to our little friends from foreign lands, I think we must all admit there is plenty of room for recruits in this branch.

Please do not think I wish to imply that we are worse off in this respect than other societies. Last year I was looking through the show reports in the bird paper, and counted about 30 or 40 at which either no entries appeared at all, or if any, these were exhibited by about two members at the most, and in some cases it was a Siberian or German Goldfinch or Bullfinch or two, which were the only entries. I do not class these as foreign birds at all. When we see this we cannot fail to remark that something is wrong somewhere; well, what are we to do? Why! find out what that something is and try and put it right. Having asked many different people I have met at the smaller shows where foreigners are exhibited (you can always find them being admired when they appear on the bench), if they owned any of those present, or kept any at home, I have invariably received an answer like this:—"Oh, no; I could not afford to"; or, "I should not be able to keep them; I know nothing about foreign birds"; or, "I have no suitable place to keep them, I suppose they must be kept warm, they must be very delicate." I should not be surprised if many of those present to-night were to make a similar answer if the question were put to them.

Little Trouble and Expense.

Now, before I start speaking on the birds themselves, let me ask you to forget such ideas if you have any, and take my word for it, that if you wish to keep and exhibit foreign birds, you may do so with as little trouble and expense as you would have if you were keeping British birds or Canaries, provided you start at the bottom of the ladder, and do not try to start half-way up as some do and then be disgusted at the results. When I say, as easy as keeping British birds, I mean in comparison; that is, comparing the soft bills, such as Tanagers, etc., and the Dartford or other Warblers, Chiff-Chaffs, etc.

Take, for example, the man starting to keep British birds; what would you say if he started by trying to keep one of those Redstarts or, one of the delicate Warblers to begin with? You would say he was asking for trouble, and you may be certain he would find it. If he asked the advice of any of our English birdie men, a common Greenfinch or Redpoll would be nearer the mark, I think, for him to start with. Well, it is the same in the foreign Fancy; don't mind starting off with a common hardy bird.

My object this evening is to speak entirely for the benefit of the novice, so if any old hands at this most charming section of your cage bird hobby are present, I hope they will bear with me while I go over ground which must be familiar to them.

When starting you will find two or three pairs quite enough, and, indeed, some will not want more than a pair, for understand that you must keep them very clean if your birds are to be healthy and win. The best kind of cage, I find, is the box shape, with which all bird men are familiar. The size would depend on the number of the birds and the variety you intend to keep.

Now Is the Time.

It is now the best time to start, as the weather is mild, and you will have the summer before you for getting your birds well acclimatised, and then they will require no heat at all if kept indoors in the winter. Many people lose birds in the cold weather, and think it is the cold that kills them. In some cases it is so, but in many it is want of food.

When the long nights and dark evenings set in, many of the little birds go to roost as early as 4 or 5 o'clock in the afternoon, and get no daylight until 7 o'clock the next morning. This gives them about 14 hours without food, and in the course of nature everything has passed through them in this time, leaving the poor little mites to face a hard frost with an empty stomach; no wonder they die. I should not wonder if many of us would do the same under similar conditions.

My plan is to go into my bird house about 9 p.m. and light the lamp; and you will then soon find them all making a good meal. When this is finished, they go off to roost, and are then able to keep themselves warm despite the cold nights.

For the Waxbills and smaller birds, a nest box should be kept all the year round in their cages, and you will find that they sleep in there and keep warm and snug.

You will require to know what seed to give your birds before buying them. White Millet, Indian and Spray Millet, and Canary seed will be sufficient for all those I shall mention, but do not forget that they are all fond of a bath; and above all things, keep your water pots free from dirt.

The Grey Java Sparrow.

Now we come to the birds themselves. First and foremost I would recommend the Grey Java Sparrow. These birds come from Java, and are found in big numbers along the East Indian coast, and Borneo, and extend to China and Japan. You can obtain a pair for 2s. 6d. or 3s. The cock and the hen are alike in plumage, but you will notice that the bill is finer and not quite so large in the hen as in the cock, and that she is of slimmer build. When we get a large number over, some are very young birds, and you will notice that instead of the cheeks being white, they will have entirely darkened heads. Some unscrupulous dealers try and palm these off as hens; they are nothing of the kind—only birds of unmatured plumage—so be on your guard.

There is also the pure white or albino Java Sparrow, but you will have to pay 8s. 6d. or 10s. 6d. for a good pair. These birds are mostly bred in cages, and may be kept in an outdoor aviary if they are provided with a shelter to sleep in all the year round.

Hardy, Cheap and Prolific.

We will now go to Australia for our next two species. First the Budgerigars, very often called lovebirds by those who are not acquainted with them. Most of you will know the species when I mention that it is the little bird the gipsy women carry about with them to tell your fortune. This bird has many points in its favour. It is hardy, fairly cheap, and breeds well in captivity.

You will have no difficulty in picking out the cock and hen. If you look at the cere (that is the little hard fleshy piece at the top of the beak) you will find that in the cock this is blue, and in the female bird brown. Some years ago (I don't think it is done now, hens being very scarce) by using the caustic stick, a cock soon became a hen, so they said, by burning it on this spot. You may try another way if you are not quite certain whether it has been tampered with; put the bird in a cage and then try and catch it. A cock bird will keep on uttering its call note, but it is very seldom a hen does. When breeding, you should supply them with a large cocoanut husk. The number of eggs varies from 3 to 6 in a clutch; and it is about three weeks from the time of the first egg being laid (and I might say they are laid every other day), that the young hatch out. They do not leave the nest until they are fully fledged, which is when they are about 17 days old.

(*To be continued.*)

Bird Migration: One of Nature's Miracles.

By W. E. Teschemaker, B.A.

(*Continued from Page 353*).

Losses During Migration.

We will suppose then that one fine August morning shortly after daybreak our young migrants cross the Channel, flying, if the wind be favourable, at a height far beyond the limit of human eyesight but, if against an adverse wind, low over the surface of the water, and we may dismiss from our minds the theory that they wait for a favourable wind, because the valuable data obtained from lighthouses and lightvessels during the years 1880-1887 have shown conclusively that though variations of temperature may retard or accelerate migration, wind does not affect it (see the report of the Committee of the British Association, published July, 1896).

We may be sure that many of these migrants will never return to us. Hawks will destroy many; the Frenchman and Italians will catch and eat thousands of them, and gales and snowstorms will further thin their ranks. Nevertheless, there is evidence that some of the older birds are able to perform their long journey in comparative safety, for marked birds have been observed to return to the same breeding quarters for a succession of years—a hen Turtle Dove returned to one district in Yorkshire for more than 20 years.

A Simpler Problem.

We will now say a few words about the spring migration, which is a much simpler problem because the migrants which return to us are all birds that know the route and which we may assume have a natural affection for, and desire to return to, the home of their childhood. There is one question, however, which naturally presents itself, and that is—why should they return at all from a land where they have found food abundant? Probably this is chiefly a matter of temperature. We must recollect that almost all birds suffer from heat very much more than from cold; their temperature is from 4 to 12 degrees (Fahrenheit), higher than our—in fact, compared with ourselves, they may be said to be always in a fever. Also we must recollect that in Northern Africa the hot season may be called the winter, because vegetation becomes scanty, many of the trees lose their leaves, and insect life is less abundant.

Let me quote a little pen-picture from Witherby's "Bird-hunting on the White Nile," to enable us to realise what our migrants feel like in Egypt in the month of March. "The extreme dry heat of the country affects the birds perhaps more than other animals. All the land birds, large and small, almost always kept their months open as though gasping in the heat. . . Another visitor appeared in the daytime. This was the Lesser Whitethroat—a summer visitor to England, and exceedingly numerous during our winter and spring on the White Nile. The Whitethroat came to my tent for water, a bucket of which was kept near my bed. On the very first day of my illness this bird found out the water and came into the tent, perching on my arm or on the bed.

Are Any Migrants Double Brooded?

We may therefore assume that the climatic conditions, in N. Africa at all events, in the spring are not suitable for nesting, but I should like to call your attention to the fact that such a contingency is quite possible, and, what is more, that in the case of at least one species it does actually occur. We must all of us have seen it stated over and over again that no migratory species, nesting in Europe, rears another brood in its winter quarters, but we have it on the authority of the well-known S. African ornithologist, A. Haagner, that the Bee-eater (*Merops apiaster*)—a species nesting in S. Europe—also breeds in its winter quarters in South Africa (see "Sketches of S. African Bird Life," p. 30).

We must also not lose sight of the fact that, although individuals have a tendency to return to the district where they were born and bred, yet the majority of species, viewed collectively, do not migrate to a greater distance than they can help in order to breed. For instance, the Nightingale breeds in N.W. Africa (see Irby's "Birds of Gibraltar"), it breeds in the garden of an acquaintance of mine at Mentone in the South of France, and, if it travels as far north as Yorkshire, we may be sure that it is because all suitable nesting sites, southwards of its northern limit, are occupied. Now consider the case of an extremely abundant species, such as the Chiffchaff or Willow Wren, which are compelled by their very numbers to migrate as far as Northern Russia, and even to cross the Urol Mountains and invade the territory of the Arctic Willow Warbler and the Siberian Chiffchaff in the great district drained by the river Yenesei.

Books for Bird Lovers.

Brief particulars of some of "Cage Birds" SPECIAL PUBLICATIONS for keepers of birds, with post free prices.

THE HYGIENE OF BIRD-KEEPING, 1/1.—By W. Geo. Creswell, M.D. Thoroughly treats of modern hygiene (the science of health) in bird keeping.

SEPTIC FEVER OR CANARY PLAGUE, 7d.—By R. H. Clarke, M.D. The only booklet published concerning this dread disease, which Dr. Clarke has given very special study.

THE NORWICH PLAINHEAD CANARY, 1½d.—By J. H. Payne. Pronounced by all experts to be a most valuable pamphlet concerning the breeding of the variety; written by one of our leading judges.

CANARY BREEDING FOR BEGINNERS, 7d.—By Claude St. John. A Practical, up-to-date guide to Canary breeding, designed specially for the use of the beginner. Deals very fully with the choice, sexing, and mating of the birds, feeding for condition, the cages and their fittings, the bird-room, egg-food, nest-building, rearing and moulting the young, colour-feeding, training for show, and all the difficulties likely to confront the breeder.

MEATING-OFF AND FEEDING SOFTBILLS, 6½d.—By John Frostick. No fancier of Insectivorous Birds who wishes to succeed in his hobby can afford to be without a copy. It also contains notes on Bird Trapping, Cages, etc.

SEEDS, FOODS, AND WILD PLANTS FOR CAGE BIRDS, 1/2. — By various leading authors. Full information on the seeds suitable for all cage birds, their food values, uses, etc., with descriptions and illustrations of the wild plants indispensable to the successful keeping of British and other birds.

HOUSE'S CANARY MANUAL, 1/2.—By C. A. House. A thorough, practical guide to the general management and breeding of Canaries, dealing fully with the breeding, etc., of every member of the Canary family, including the Roller (or Singing) Canary. An illustration of each bird, by the master Canary artist, Mr. H. Norman; exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge.

BUDGERIGARS AND COCKATEELS, 6d.—By C. P. Arthur. The breeding of Budgerigars and Cockateels is recognised as one of the most profitable and pleasure-giving sides of foreign bird-keeping. This eminent authority gives very full details upon how to keep, feed, breed, tame, and teach them to talk.

PET RABBITS, CAVIES, AND MICE, 1/1½.—By George Gardner. Full information on housing, feeding, breeding, exhibiting, and keeping for profit. A complete practical guide, with illustrations from photographs.

FOREIGN BIRDS FOR BEGINNERS, 1/1.—By W. T. Page, F.Z.S., etc., Foreign Bird Expert to "Cage Birds." A highly instructive Manual. It contains a magnificent coloured plate and a number of black and white illustrations. Indispensable to all keepers of Foreign Birds. Replete with useful hints.

BRITISH BIRD MANUAL, 2/3 (cloth bound).—By H. Norman; or may be had in two parts. Part 1: "Hardbills," and Part 2: "Softbills." Either Part, price 1/1, post free. Each part contains a beautiful and life-like coloured plate and numerous illustrations of birds and cages. Up-to-date information on the keeping of British Birds; full of extremely valuable hints.

COLOUR FEEDING OF CANARIES AND OTHER BIRDS, 3½d.—By J. W. Ramsden. Tells you how to mix the colour-food, and how to moult the birds to get the richest possible colour.

THE STOCK BOOK, 7d.—By G. E. Weston. Of our invaluable "Breeding Room Register" a well-known fancier has said:—"It makes bird-breeding easy." No breeder of birds can possibly afford to be without it. It simplifies the operations in the bird-room and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred. Contains both Pedigree, Breeding, Young Bird, and Show Registers of simple and unique character, in addition to useful account pages, and many invaluable "Hints for Emergencies."

AVIARIES, BIRD-ROOMS, AND CAGES, 2/3 (cloth gilt).—By H. Norman. Contains ten lovely full-page photographic plates. A practical guide which deals thoroughly with the proper Building, Fitting, and Management of Aviaries and Bird-rooms, and the making of Cages.

YORKSHIRE CANARIES, 1/1½.—By H. W. Battye (Past President of the Yorkshire Union). Absolutely the very best Handbook dealing with the Yorkshire and its sub-varieties. Contains complete instructions upon Pairing, Breeding, Moulting, and successful Exhibiting, also how to treat in both health and disease.

NORWICH CANARIES, 1/1.—By C. A. House. Tells the fancier all that he needs to know to enable him to become successful as a breeder, and exhibitor of the Norwich Plainhead. The chapters on "Forming a Stud," and "How to Produce the Ideal" are worth the cost of the whole book many times over.

BIRDS OF THE COUNTRYSIDE, 5/4.—By Frank Finn, B.A., F.Z.S. A handbook to the wild life of all our familiar British birds; their appearance and habits accurately described. With 12 beautiful coloured plates, and 118 photographic illustrations. A charming gift book.

PETS, AND HOW TO KEEP THEM, 5/4.—By Frank Finn, B.A., F.Z.S. Gives the correct method of housing, feeding, and managing every kind of pet; all sorts of animals are dealt with—monkeys, dogs, cats, lizards, tortoises, also gold and other fancy fish, while there is a large section devoted to birds. Contains many coloured plates and illustrations from photographs. Another charming gift book.

FANCIERS' PRINTING.—Fanciers requiring business notepaper, postcards, trade envelopes, etc., should write us for a quotation. We are now in a position to supply these at specially low rates combined with first-class work. Artistic memos., with block of any desired bird, and fancier's name, address, and 12 words of description, 250 2/-, 500 2/6, carriage paid.

Advertisements continued from page 435

MAINLY CANARIES—continued.

CLEARING pair high-class Yorkshires, 25/-; Yellow hen, 10/-; double breeder, 3/6; flight, 5/-; Crystal Palace aviary, 15/-; lot sundrics, 5/-; or exchauge; no live stock: Gibson, 74, Finborough-rd., Soutb Kensington.

GEO. HARLAND, winner (outright) of Hull Cage Bird Society's champion cup, best young bird, 1908-9, having paired up, can spare few Buff Norwich cocks, 10/-, 15/-, 20/- each; also Buff do. hens, 15/- each, or exchange: 63, Welbeck-st., Hull.

Mainly Foreign.
To be Sold or Exchanged

ROCK Parrot, finger-tame, talker, 17/6; Cardinal, 5/-; cock Canary, 4/-; offers: Burgess, 60, Taybridge-rd., Battersea.

LARGE yellow-fronted Amazon and cage, winner Bournemouth and Palace, 65/-; exchange singing Canaries: Evenson, Lansdown, Bournemouth.

Miscellaneous
Sale or Exchange

TAME dog fox, 9 weeks old, 20/-, or offers: Davies, Square, Llandulas.

LARGE square Parrot cage, nearly new, cost 18/-; sell 12/-; exchange: Bourne, 85, Hot-lane, Burslem, Staffs.

GLAZIER'S diamond, value 15/-, for Mules, Canaries, or offers; approval: B., 48, Perceival-st., Clerkenwell.

5 x 4 hand or stand camera, 12/6; exchange Canaries. Cost 42/-: R. Wildasb, 146, Blackhorse-rd., Walthamstow.

ONE large-size, also smaller aviary cages, nearly new, 12/-; or exchange: Abel, 69, Arthur-rd., Wimbledon Park.

EXCHANGE one gal. best oak varnish for pair Yorkshires or Rollers; yours first: M. Manning, 20, Pine-st., Cork.

EXCHANGE pair short-faced Tumblers, value £2, for Norwich or Yorkshires; approval: J. Hughes, Northam, Devon.

WHAT offers anything for 62 CAGE BIRDS and plates, complete to April 16tb: Lindley, 31, Westbury-st., Sheffield.

EXCHANGE banjo (Ward's Liverpool) for pair of Canaries for breeding, or Britisb birds: Greaves, 92, Edgeware, Liverpool.

PHONOGRAPH and 30 records, value 15/-; exchange Canaries; no rubbish wanted: F. Hird, Helm, Bowness, Windermere.

BLUE Dutch doe, black Dutch buck, medium silver grey buck; what offers; or exchange: 4, Greenmount-st., Beaston-hill, Leeds.

EXCHANGE handbag, nearly new, cost 9/6, for two unflighted Norwicb hens: Flint, 2, Chesterplace, Plumstead, Kent.

TWO Roller sbutter box cages, bow cage, Skylark (singing); cages new; Scboolmaster, Parrot; offers: 10, James'-st., Tyldesley.

BULL Terrier, 18 months; sell 15/-; or exchange any kind of birds; no Softbills: Arthur Wykes, 3, Pond-st., Kirkby, Notts.

WATER-colour picture, fancy woollen red waistcoat; exchange Canaries, British, Mules: Dunning, 2, Chapel-terrace, Chester.

SALE or exchange, Golden-spotted Dalmation dog and bitch pup, 10 months, good pedigree: Whiffin, The George, Linton, Cambs.

GRAND Crystal Palace aviary, 20/-; cost 35/-. Will exchange for Canaries, Goldfinches, or Mules: Tomward, Victoria Bridge, Leeds.

GREENFINCH and Norwich hen, green Norwicb cock, black ebony walking stick; exchange tools or offers: Phillips, Flatgate, Howden.

WILL give lady's gold watch in exchange for pair Scotch Fancies, value 30/-; approval: Robt. Kerr, 82, Gardiner-st., Partick, Glasgow.

PEN Silvor Spangled Hamburgh, three hens, cock, sell 16/-; useful exchange; particulars; approval: Bignell, 170, Meyrich-rd., Battersea.

EXCHANGE Cassell's History of England, 68 parts, unbound, for good Palace aviary; approval: Jewell, 12, Brailsford-rd., Brixton, London.

LADY'S violin, bow, case, all complete (good) condition, accept 30/-; exchange entertained; stamp particulars: G. Frith, Crowle, Lincs.

WILL exchange one pair of racing homer pigeons for Norwich hen Canary, ready for nesting: T. Hines, Gedney Drovend, nr. Wisbech.

ONE pair of short-distance homers and young one, 10/6; exchange Canaries; approval each way; yours first: Sharples, Walker-st., Clitheroe.

HAND sewing machine, nearly new, 35/-, working order, F. and R. Pattern; exchange Canaries, anything: Causton, 27, Garner-st., Hackney.

FIFTEEN disc records, single and double-sided; exchange British; sell 20/-: Mr. T. Noble, Barberton House, Harcourt-st., East Kirkby, Notts.

GRAND cross-bred bitch, Terrier, and pedigree Spaniel, partly broke, chocolate colour; sacrifice 10/-; exchange Canaries: Palmer, Joiner, Chard.

WILL exchange pure-bred Bedlington, five months old, for Canaries, or sell 12/6: Nicholas Morgan, Hirst-st., Wheatley Hill, Co. Durham, S.O.

NEW set goat harness, cost 38/6, sell 8/0; exchange Canaries, birds, anything useful: Mrs. Reeder, 50, Yorley rd., Upper Holloway, N.

PIGEONS; black chequered show Homers, Conference rung, 1909; sell or exchange Canaries or Foreign birds: Aviaries, Monk Tryston, Yorks.

EXCHANGE pair hollow ground razors, in silk-lined case, for 1 cock or 2 hen Canaries; approval: Herbert Marsden, 175, St. Philip's-rd., Sheffield.

FISHING rods, with cover, brass winch, eel lines; exchange pair young Norwich or Cinnamons; birds first: H. Townsend, 49, Claude Avenue, Bath.

PAIR Yorkshires and show breeding cages for quarter plate camera and accessories; yours first: Degenhardt, Sharnden Farm, Mayfield, Sussex.

CROSS-bred Pomeranian dog, 15 months, 5/-; cock Redpoll, bred with hen Canary last year, 3/6; exchange, no livo stock: Bate, Bousall-st., Leicester.

TWO green crest-bred hens, one Crest hen, one cock Greenfinch, for Pom. toy pup, black preferred; mutual approval: Young, Market-st., Haddington, N.B.

PEDIGREE pure white hull-terrier bitch, 9 months, not deaf; exchange Roller cocks, sell £1; approval, deposit: Aspinall, 22, Withington-st., Heywood, Lancashire.

PAIR Indian Nuns, 10/-; pair dragoons, 8/-; pair Norwich Cropper's, 8/-; pair Magpies, 6/-; or exchange anything; offers: Pearce, 179, Stafford-st., Walsall.

The "Stock Book" I find is invaluable to a breeder.—H. E. WILKINSON, *Hon. Sec. of the Stocksbridge and District C.B.S.*

THE STOCK BOOK

"Cage Birds Breeding Room Register" is framed on novel lines and contains many entirely new departures. Is absolutely indispensable to everyone interested in the hobby.

COMPILED BY G. E. WESTON.

MAKES BIRD BREEDING EASY.

Well-known fanciers have said of the "Stock Book":—It makes bird breeding easy." This book no breeder of birds can possibly afford to be without. It simplifies the operations in the bird room, and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred.

NOW IS THE SEASON YOU NEED IT.

This "BREEDING ROOM REGISTER & BIRD KEEPER'S ACCOUNT BOOK"
(copyright) offers in a handy form a means of keeping—

The complete pedigree and description of every bird in one's room.
A full record of the season's breeding experiences.
An account of every young bird reared, and how it was disposed of.
A register of one's doings at the shows (the most complete and useful yet devised).
A cash account for the year.
A profit and loss account of the season's proceedings, and a balance sheet showing how much one has invested in the hobby.

A series of Registers will thus furnish a concise record of the career of a fancier as a breeder and an exhibitor from year to year, or over any number of years.

Many useful Emergency and other Hints of great value during the Breeding Season will also be found in its pages.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bona-fides* of either buyers or sellers In all transactions the adoption of our Deposit System should be insistedupon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notificd of its receipt until the amount deficient, plus the extra postago incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers takon for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit will be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must he borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must he a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—6d. for the first sixteen words. One Halfpenny per Word for each word over sixteen. MINIMUM, 16 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first Sixteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines 6d., 9d., 1/-, 1/3 according to size.

Small prepaid advertisements of a general nature and not connected in any way with the Cage Bird Trade are inserted at the rate of ½d. per word throughout. Minimum 12 words 6d.

Advertisements must in all cases bear the bona fide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

TAMS' No. 120. THE MODEL MILL.

This Mill is far in advance of the old-fashioned one. It is fitted with removable plates. By simply adding or removing plates, you can grind any kind of Seed from Rape to Sunflower Seed to any desired grade.

It is metal throughout and with ordinary care will last a lifetime.

This is the very article required in every Bird-room.

You cannot get a Mill to do the work better or quicker if you pay 20/- for one.

PRICE 1/6 EACH, by Post 1/9.

No. 121. Large Egg and Bread Mill, Price 2/6.

No. 52. TAMS' New round Partition Egg Drawer, Punched Bar fits in the groove, 2d. each, 2/- dozen.

Breeding Cages.—This is where I beat all others. Every cage I send out is fitted with nest pans, egg drawers, and everything you want; single breeding cages, 3/6, 4/-, 4/6; double breeding cages, 6/-, 7/-, 8/-, 10/-; cage fronts, seed mills, punched bar wire, 7 lbs. 2/-.

No. 86. Tin Seed Boxes, extra well made, 2 in. wide 2/6 doz., 2½ in. wide 2/9 doz., 3 in. wide 3/- doz., 4 in. wide 3/6 doz.

No. 80. Egg Sieves, 6 in. diameter 6d. each.

Tam's Perfection Nursery Cages, extra well made detachable tops, loose sliding bottoms, all complete, ready to hang on cages, price 2/6 each.

No. 84. Fanciers should try my Special Square Wire Bath, fitted with white Earthenware bath, acknowledged by all leading fanciers to be the cleanest bath made, will hang on any cage, made in three sizes:—4 in. sq. 8d., complete; 4½ in. sq., 10d., complete; 5 in. sq., 1/-, complete.

Cage fronts, 12 by 12, 5/- dozen; 15 by 12, 7½d. each, 6/6 dozen; 16 by 12, 8d. each, 7/- dozen; 18 by 12, 9d. each, 8/- dozen; cage wire, 7 lbs. 2/-, 14 lbs. 3/6; punched bars, 1/- dozen.

I have also the finest stock of seeds: Spanish, finest bold, £1 2s. cwt., 14 lbs. 3/-; German rape, linga, linseed, hemp, dandelion, thistle, maw, all best cleaned. See my Catalogue, 60 pages. Shopkeepers send for my list of packet seeds, I keep the largest and best fitted bird-shop in Staffordshire. My only address is:—

ENOCH TAMS, Clarence Aviaries, Church Street, Longton, Staffs.

Flight cages made as above, 36in. 4/6, 40in. 5/3, 46in. 6/-; remember these are made from selected boards, not soap boxes: Morris, 112, Cape Hill, Birmingham.

CAGE BIRDS SAVED IN THOUSANDS.

Redmite caught by the million in the "King" anti-mite perch. All cage birds, it is well known, are martyrs to the redmite pest. If your bird does not sing, is loose in the feather, mopes in daytime, and is fidgety at night,

THE CAUSE IS "REDMITE."

If your birds will not sit, or the young birds die,

THE CAUSE IS "REDMITE."

The "King" anti-mite perch is the outcome of the practical experience of a Canary breeder, and is the only effective means of ridding your birds of the redmite, and other parasites. The "King" anti-mite perch is readily adaptable to both breeding and drawing-room cages, and is an ornament to the cage. It is made of well-seasoned wood, with ornamental ends, and an extra end with spike for wooden cages. To be obtained from all seed merchants, corn chandlers, and stores, at 6d. each, or direct from the manufacturers, at 6d. each, postage 1d., or two for 1/1, postage paid to any address in the United Kingdom. Full instructions and cleaning brush with each perch. Patent applied for

THE INTERNATIONAL PATENTS CO., 40, Coswell Road, London, E.C.

Rings and Pedigree Books.

60,000 Sold Last Year.

Aluminium, round edges, embossed numbers, size of ring, with year on, or without, all made by myself, and not cheap, foreign rubbish; am maker to the Aberdeen University, supplying them by thousands for the smallest to the largest bird that migrates; being embossed, the numbers cannot fill with dirt, like all other makes of rings, which are sunk. "Cage Birds" says they are beautifully neat, small, and light, and easy to use; in fact, difficult to imagine anything better in marking rings. **No closed rings made: 6d. doz., 2/6 half gross;** stamp for samples. Pedigree Books 6d. each.

SAM DRAKE, 31, Haley Hill, HALIFAX.

NURSERY CAGES (BEAUTIES), 1/6; with Bath combined, 2/- each.

SUPERIOR ALUMINIUM RINGS

METHODICAL BREEDERS should not omit to mark their birds with these high-grade rings; they are the lightest, neatest and most reliable made, yet inexpensive. The rims are perfectly round and smooth, and the numbers cannot fill with dirt. These are the reasons why they have been used and recommended for years by leading fanciers. "Cage Birds" says:—"One of the best samples we have seen." 150 for 4/-, 100 for 2/9, 75 for 2/3, 50 for 1/6, 25 for 10d., post free, carefully packed. Consecutively numbered with or without year. Supplied with or without flanges. Give them a trial this season, and test their superiority for yourself. **Breeding-room Registers, 7d.** each, post free.

THERE ARE TIMES

When breeders of Canaries and Hybrids find it inconvenient to cook and mince up egg for their birds. **We can help them, for our**

EGBISCO

which is already cooked and sterilized, only requires damping with cold water to make a reliable, efficient and genuine Egg and Biscuit Food, upon which the breeder may rely implicitly. Do not confound it with any other preparation on the market, for it resembles none of them in the least. Sold in 3d., 6d., and 1/- tins, by us, and all Corn and Bird Shops. It has been pronounced by publicly-recognised authorities to be by far the

MOST ACCEPTABLE FOOD

of its kind on the market.

One trial makes constant users.

"COLOUR Feeding of Canaries and other Birds." By J. W. Ramsden. Tells you how to mix the colour-food, and how to moult the birds to get the richest possible colour; price 3½d. post free: From the Publisher, CAGE BIRDS, 154, Fleet Street, London, E.C.

"CANARY Breeding for Beginners." By Claude St. John. An exceptionally helpful, intensely, practical, and instructive handbook for beginners and tyros at Canary breeding. It is profusely illustrated and contains innumerable hints helpful to all young bird-keepers; price, post free, 7d.; cloth bound, 1/2: From the Publisher, CAGE BIRDS, 154, Fleet Street, London, E.C.

"YORKSHIRE Canaries: How to Breed, Manage, and Exhibit." By H. W. Battye, President of the Yorkshire Union. It deals fully with the Yorkshire Canary, and its sub-varieties, and should be in the hands of every breeder; it gives the fullest instruction upon pairing, breeding, moulting, exhibiting, and how to treat both in health and disease. Illustrated by Messrs. H. Norman and A. J. Simpson; price, post free, 1/2; From the Publisher, CAGE BIRDS, 154, Fleet-st., London, E.C.

"THE Stock Book," our invaluable "Breeding Room Register," by G. E. Weston. A well-known fancier has said of it:—"It makes bird breeding easy." This book no breeder of birds can possibly afford to be without; it simplifies the operations in the bird-room, and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred; it contains both pedigree, breeding, young bird and show registers of simple and unique character, in addition to useful account pages, and many invaluable "Hints for Emergencies," designed to help all bird breeders; post free, 7d. from the Publisher, CAGE BIRDS, 154, Fleet-street, London, E.C.

100 Yorkshire hens, grand healthy typical birds, must clear, 24/-, 30/- dozen; a genuine bargain; approval, cash or deposit: Gledhill, Fleet-la., Queensbury, Bradford.

OGDEN BROS.

Have a few young cocks, that we had specially reserved to run over for next show season, buff or yellow, 15/- each, certain winners; one buff cock, bred 1908, big winner, £2; also an extra big, fine buff stock cock, close on 7½ inches, and feathered like marble, 35/-; 1 nest of this will pay for bird; we are offering all the above at only half their value; room wanted for young; approval: Dudley Hill, Bradford.

REMEMBER I Invite You

to come on any day but Sunday to see my stock. It will be a pleasure to me to show you round my rooms.

I shall be at home to receive visitors during the Whitsuntide Holidays (Monday all day, Tuesday up to noon). You will be welcome, and will not be asked to buy.

Is not this proof that I have **a genuine stock of high-class birds** in all varieties? If you cannot come, simply state your wants, and I will land birds to your door for 7 days' approval at my risk. Can any offer be fairer than this? Get one pair and compare with all others at same price.

YORKSHIRES, bred from, and related to, winners at all the leading shows, including Palace, at the following cut prices:—

COCKS, grand, long, typical birds, 6/-, 6/6, 7/-, 7/6, 8/-, 8/6, up to 20/- each upwards.

HENS, long, slim, racy hens, 3/6, 4/-, 4/6, 5/-, 5/6, 6/-, up to 15/- each upwards.

SPECIAL.—Grand properly matched pairs, to breed own winners, 10/6, 12/6, 15/-, 20/-, 25/- per pair, guaranteed unrelated.

YORKSHIRE GREENS, as bred by Messrs. Clayton, Pickup, and Hellawell, the noted exhibitors. **Cocks, 7/6, 10/-, 12/6, 15/-, 20/-; hens, 5/-, 7/6, 8/6, 10/6, 12/6, 15/-;** pairs from 12/6 upwards.

NORWICH PLAINHEADS, large typical cobby birds, bred from some of the finest strains in the country. Cocks, hens, or pairs, same prices as Yorkshires.

NORWICH CINNAMONS.—Some real beauties, cocks, 10/-, 12/6, 15/-, 20/-; hens, 7/6, 10/-, 12/6, 15/- each.

LANCASHIRE COPPIES AND PLAINHEADS, 7/6, 10/6, 12/6, 15/-, 17/6, 20/-; pairs, 15/- to 40/-

BORDER FANCIES, smart, stylish birds, cocks, 6/-, 7/-, 8/6, 10/- each; hens, 3/-, 4/-, 5/-.

CRESTS AND CRESTED-BRED.—Large, massive, feathery birds, cocks or hens, 6/6, 10/6, 12/6, 15/-, 20/- each, upwards

SEIFERT ROLLERS, hens, 3/-, 3/6, 4/-, 5/- each.

SCOTCH FANCIES.—Cheap to clear; write for particulars.

SIB-BRED HENS, for Mule breeding, 3/6 to 7/6 each.

CINNAMON-NORWICH HENS, for Muling, 30 grand hens ready for nest, 7/6, 10/6 each.

SONGSTERS in every variety of Canary or Mule, 6/6, 7/6, 10/6, 12/6. Travelling cages 3d. extra.

AMATEURS cannot possibly do better than send for one of my matched pairs of Yorkshire or Norwich at 8/6, 10/6, 12/6, or 15/-, together with one of my splendidly fitted breeding cages, all complete, at 3/- for single, and 5/- for double compartments.

Easiest of easy payments arranged to suit the convenience of fanciers, and as the breeding is now approaching, birds will be sent immediately on receipt of first payment.

Remember this: I trust you; I send every bird on 7 clear days' approval, delivered at your door at my risk. I do this knowing that the birds will speak for themselves.

ESTABLISHED OVER 30 YEARS.

Testimonials reach me by every post from satisfied customers. These are filed for inspection, and you can see them any time. They bear eloquent testimony to my business methods.

Aluminium Rings, with year and number, round edges, to open and close; latest design, 6d. per doz., 5/- per gross.

Pedigree Books, perfectly designed for keeping correct records of your birds, 6d. each. Post free, 7d.

In fact, if you want any variety of Canary, or anything in the shape of appliances for the bird room, send a post card for illustrated catalogue of birds, appliances, and advice to breeders.

FREE.

JOE THOMAS,

Canary Specialist, AMBLERTHORN, HALIFAX.

BOOKLET FREE.

Finest Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all time to send my Parrots on four week's trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among Grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all Parrot buyers. Full details of our original system of selling Parrots on four weeks' trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard. Telephone No. 40 Morecambe.

B. HOLLINS, Importer, HULL.

JOHN D. HAMLYN,

221, St. George's Street, London Docks.

Arrival of Australian Birds.

AUSTRALIAN SHELL PARROTS or BUDGERIGARS. NOTICE! ALTERATION IN PRICES.

Owing to the great demand, prices now increased. Only some 900 birds left. These are Australian Budgerigars, from the Adelaide district, and are strongly recommended for fresh blood, being the first imported birds received here for years. To be continually breeding from the present French, inbred stock is dangerous, for it is only a question of time before the youngsters will sicken and die. I have received a few enquiries for so-called "tame" Budgerigars, these I do not supply. In the next issue I shall give away the so-called trick of taming Budgerigars. How these poor "faked" birds are brought to the perfection of so-called tameness.

One pair for 4/-, including package.
Six pairs for 18/-, including package.
Six hens for 15/-, including package.

Only sold in above quantities; cash will be returned if not approved, but birds must be returned same day.

INDIAN STOCK.

One Ourang-Outang, £50, under offer; 69 Rhesus Monkeys, only 24 left, 25/- each; 14 monster males and females with young ones, all for sale; one Hunting Cissa, £5, sold; 100 Ringnecks sold; five hen Shamahs, two left, 50/6 each; seven cock Shamahs, four left, 40/6 each, these are hand-reared; four green Bulbuls, two left, 40/6 each; nine Laughing Thrushes, eight left, 25/6 each; one Kingfisher, 60/6; A few birds from South America: Sixteen Violet Tanagers, cocks 12/6, hens 12/6, three Golden-shouldered Tanagers, one cock 30/6, two hens 30/6 each; one Purple Sugarbird, sold; five cock Indigoes, 25/6 each; hen, 25/6; four Long-tailed Glossy Starlings, 30/6 each; two Banana Quits, 30/6 each; five American Buntings, 15/6 each; two Pietris Tanagers, rare, 25/6 each; three Rufous-throated Tanagers, 20/6 each; Mexican Jay, 25/6; three Brown-checked Conures, 16/6 each; one pair Virginian, sold; still a few Australian Finches left; Ruficauda, 10/6 pair; Long-tailed Grass, 10/6 pair; Masked Grass, 19/6; Yellow-rumped, 14/6 pair.

Kindly note, all my stock is kept without any artificial heat. Cleanliness, with fresh air treatment is thoroughly studied at 221, St. George's Street, London Docks.

Singing Contests.

NEWSHAM.

Result of sing held April 30th: 1, G. Duffel; 2, Wake; 3, Archbold; 4, Moore. Open sing at Market Inn May 14th.—S. LAWS.

WHITEHAVEN.

Linnet sing took place at the Lowther Arms, Ginns, Whitehaven, on May 7th. The entries numbered 37, and following divided (owing to a late start): H. Reed, W. Roney, M. Graham, Devoy, and S. Hardy. T. Trainor was judge and timekeeper. A contest will be held at the Low Road Inn, on May 14th.—DALESMAN.

CASTLEFORD.

Weekly Linnet sing held at Navigation Inn, Lock Lane, there being a capital attendance. It was, however, a disappointing day for all, there being very few that sang out of the 30 hung. Result: 1, Morley; 2, Scott; 3, shared between Scott and Morley. We have a special contest May 14th at headquarters; hope all members and intending members will put in an appearance. There will be three or four special prizes.—WALTER DOBSON, Sec.

ATHERTON.

Linnet singing contest held at Uncle Paul's, the old contest house, on May 7th, when 35 birds faced the judges and some good singing was heard, both time and quality. Winners as follows: For time: 1, Statham (Leigh), 86; 2, McFarlane (Wigan), 79; 3, P. O'Neil (Leigh), 58; 4, B. Jones (Leigh), 53. For quality: 1, W. Barnes; 2, Barnes (Wigan); 3, J. Statham (Leigh); 4, W. H. Topping (Blackburn). Judges, Messrs. Green, Fearnley, Statham; quality judges, Gibbons, Tipping, and Barnes.

LEEDS.

Usual contest held at King's Head, Shannon Street, May 7th, when 33 birds faced the judges, Messrs. W. Naylor, Wood, and P. Madden. 1, 2, Soloman; 3, Bland. Also on May 8th, when 31 birds sang. Judged to perfection by Messrs. W. Naylor, A. Jennings, and T. Johnson. 1, 2, shared between Hardcastle and Soloman; 3, Soloman; 4, Bland. Don't forget our Whit Monday contest, open to all England; first bird hung at 11 a.m. prompt. Also on Whit Tuesday a contest open to all; first bird at 2 o'clock.—WILSON NAYLOR, Hon. Sec.

SHEFFIELD.

Royd's Inn Linnet Singing Society held at Mr. J. Dallamore's, Attercliffe Road, when 15 birds faced the timekeeper. Driver, 105; Palfreman, 92; Thompson, 90; Palfreman, 72; Worrall, 72; Palfreman, 43; Burkinshaw, 57; Thompson, 40; Driver, 37; Driver, 26. Contest on May 8th when 10 birds faced the timekeeper. Palfreman 87, Herbert 52, Driver 45, Herbert 40, Bowns 33, Palfreman 34. Also on May 8th, when 7 birds faced the judges. Mr. Smith won the first prize with his famous Goldfinch, Watson 2nd with a Greenfinch, Bowns 3rd with his famous Linnet. On May 15th Mr. J. Dallamore will add 10s. to an entrance of 4d. a bird. On Whit-Tuesday, May 17th, open to all England; also on May 22nd, when his weekly variety show will be held, staged at eight o'clock prompt.—A. THOMPSON, Sec.

GLASSHOUGHTON.

Usual Linnet singing contest held at Rock Inn, on May 9th, when 13 birds sang. Result: 1, Wainwright, 103secs.; 2, Longfield, 66secs.; 3, Higgins, 41secs. Members, do not forget our cup sing on Whit Monday; first bird to be hung at 1 o'clock.—A. Longfield, Sec.

BLACKBURN.

Week-end contest held as usual, when 14 birds faced the judges, Messrs. J. Dobson, A. Catterall. We had some very good singing; it is a long time since we had better. G. James's "Tennant" came 1st, G. Dobson 2nd, W. H. Topping 3rd. Referee, Mr. G. James; timekeeper, Mr. F. Lucas.—T. SLATER, Sec.

CITY OF GLASGOW.

The City of Glasgow S.C. weekly contest was held on May 7th. Judge, Mr. Christie; timekeeper, Mr. T. Hamilton. There was a good attendance. Prize-winners: 1st, Henderson; 2nd, McCallum; 3rd, Currie. On May 14th, a handsome copper kettle, in addition to the usual money prizes, will be given.—ALEX. MCCALLUM, Sec.

DURHAM.

Linnet singing contest will be held at Burton Hotel, Gilesgate, Durham, on Whit Saturday, May 14th. Prizes: 1st, electro-silver plated tea and coffee service, value 35s.; 2nd, electro-silver plated dinner cruet, value 10s. 6d.; 3rd, silver medal, value 5s.; and 4th, briar pipe and case, value 2s. 6d. Judge, Mr. Geo. Reed (Brandon Colliery); timekeeper, Mr. Stout.—WM. FAIRLESS, Hon. Sec.

GATESHEAD.

Linnet singing contest held at Gloucester Inn, High West-st., on April 30th, when 40 birds competed for the three prizes. After some very hard singing, the result was: 1, 2, 3, Adams. The runners-up were Messrs. Soulsby and Lank; Mr. G. Reed judged; timekeeper, Mr. John Gray (Windy Nook). A Linnet singing contest will be held at "Gloucester Inn," High West Street, on Whit Monday, £1 to be added to the entrance money, and gold watch for first, besides other specials. First bird up at 12 prompt.—G. REED.

NEWTOWN (Leeds).

Usual week-end quality contest held at Prince Albert Hotel, Cambridge Street, on May 8th, when 23 birds faced the judges, the winner being in a class to itself. Results: 1, A. Turner; 2, Butler; 3, Binns. Judges, Messrs. G. Towers and A. Lorriman; timekeeper, Mr. W. Dean. Please note our annual Whitsuntide contest will be held at the above house on Whit-Tuesday, and all fanciers and friends are invited to attend. Any donation for this contest, however small, would be gratefully accepted.—A. TURNER, Hon. Sec.

CARBROOK.

Weekly Linnet singing contest held at Fitzwilliam Hotel, Milford Street, on April 24th, before a crowded house, when 22 birds entered, two minutes' sing. Brown, 1, 50; Robinson, 2, 48; Cutts 43, Cole 43, divided for 3. Also on April 30th, when 12 birds entered, 4 minutes' sing. 1, Coles, 136; 2, Lummy, 135; 3, Lummy, 127. On May 8th, when 22 birds entered, 2 minutes' sing. A splendid performance was done by Brown, he taking all three prizes with his famous birds, at one minute faced and one minute bluffed, 1 52, 2 51, 3 50. Bird singers, don't forget our annual sing on Whit-Monday; 38 birds entered for this great contest; anyone making a visit to Carbrook (Sheffield) will be delighted if they call at Jack Grundy's Fitzwilliam Hotel, Milford Street. Contest, first pair up at twelve o'clock.—A. BROWN, Sec.

REVIEW OF SCHEDULE.

Newburgh, July 23, East Shore Park. 9 members' classes: Scot. 1, Crest 1, Nor. 1, Common 1, Mule 1, Brit. 3, For. 1. Prizes (of value) 2s. 6d. and 1s. Entries close to WILLIAMSON and DUNCAN, Newburgh.

I must again thank you for the splendid sketch of my even-marked Border Fancy Canary, which appeared your valuable CAGE BIRDS ANNUAL of 1910. I am sure very great credit is due to your artist, Mr. H. Norman, for the natural and life-like way this bird was drawn. It has resulted in an order for this variety from Queensland, Australia, which I have completed, and trust the birds will have a safe passage and prove as successful there as in this country. I wish CAGE BIRDS every success.—FRANK WARDLEWORTH (Stockport).

A Useful Society.

The Irish Society for the Protection of Wild Birds is doing good work, and doing it in the direction in which it is most needed; that is, the protection of rare and interesting species. They have been instrumental in obtaining five new protection orders. They approached the county council of Kerry to give protection to the few pairs of Choughs breeding in the district, but without success. Notwithstanding this, however, they managed to give protection to the species during the breeding season. Through the kind assistance of the owner of certain lands, and the two watchers appointed by the Society, all attempts at raiding the Chough's nest were frustrated, but so persistent are egg-collectors that the keepers and watchers had to be constantly on the watch, and had a most anxious time of it while the birds were nesting.

An Adventurous Cyclist.

A private telegram has been received by Mr. C. Don, the editor of the "Times of Natal," announcing that his brother reached Khartoum last week after an adventurous journey through the whole length of Africa. Mr. J. B. Don left King Williamstown, Cape Colony, in May, 1909, on a Rudge-Whitworth Aero-Special bicycle, fitted with three-speed gear, and weighing only 29lbs., and travelled to Bulawayo. Thence he proceeded by way of Broken Hill to Fort Jameson; then, crossing the Tanganyika Plateau, he traversed German East Africa and Uganda to Gondokoro on the upper waters of the Nile. Except for a severe bout of fever in Uganda, the adventurous traveller enjoyed perfect health during the whole journey. From Bulawayo to Fort Jameson he was accompanied by a native guide; after that he travelled entirely alone. Mr. Don is probably the only man who has ever crossed the whole continent by himself on a bicycle, and he has had some very interesting experiences.

Club Reports.

LONGTON AND DISTRICT C.B.S.

Monthly meeting held May 3rd, Mr. C. Birks presiding over a large attendance. The nest feather show schedule was discussed, it being decided to add two more classes to it, namely, Softbill and Foreign. The classes read as follows:—6 Norwich, 6 Yorks, 3 British Hardbill, 1 Softbill, 1 Foreign, and 2 Mule classes. There are specials for every class, besides one for most entries and one for best bird shown by a novice member who has never shown in open shows. We also elected four new members, namely, Messrs. Munro, Burton, Kelsall, and Warrillow. Anyone wishing to become a member should apply to us for information.—HALLAM and LOVATT, Hon. Secs., 5, Francis Street, Longton, Staffs.

NATIONAL GREEN-MARKED Y.C.C

The result of the ballot for the election of officers for the club for season 1910, runs as follows:—President, Mr. W. H. Shackleton (unopposed); Vice-President, Messrs. H. W. Walsh, 18 (elected); T. Ogden, 14; F. Townsend, 10; Committee (inside Yorkshire), 10 required: Messrs F. Townsend 38, F. Hammond 36, R. Halliday 36, S. Dean 33, H. Hill, W. Crabtree, H. H. Towers 31 (tie), T. Ogden 26, J. Wilcock 24, W. A. Cowgill 23, H. J. Chittenden 20, S. Hough 20, L. Briggs 19, F. Hodgson 12, W. Firth 10, H. Lord, 9; Committee (outside Yorkshire): 5 unopposed, Messrs. J. W. Ramsden, T. C. Crawhall, A. Ambler, J. Currie, and A. Hirst; Hon. Auditors, Messrs. F. Hammond and S. Dean; Hon. Scrutineers, Messrs. F. Townsend and H. W. Walsh; Hon. Sec. and Treasurer, Mr F. Armstrong, 78, Pear-street, Parkinson-lane, Halifax.—F. ARMSTRONG, Sec. and Treas.

SOUTH SHIELDS AND DIS C.B.S.

Monthly meeting held May 4th, at Lockhart's Cafe, King-street, Mr. W. Thompson in the chair. The Secretary announced and handed the balance-sheet of the past year to its members, it showing an income of £63 7s. 4d., and an expenditure of £63 6s. 6d., showing a balance of 10d., which was considered good in view of the poor support we received in the way of entries. The next consideration was the young bird show, which we decided to have in July. We are adding three more classes, making 24 in all. Mr. J. Turner's name was proposed and carried as judge on this occasion. Another new member was added to our books, Mr. Addison, of Birchington-avenue. All fanciers in our district are given a cordial invitation to join us, as we are only holding a members' show this year. The prospects of our society are very promising. A good number of new members have already been made, and many more are in view. Should any fancier wish to join us, please call on or write to me.—JAS. BARRASS, Sec., 76, Hartington-terrace, South Shields.

SCOTTISH PLAINHEAD CLUB.

Committee meeting held in Rooms, 142, High Street, Edinburgh, on April 30th, Mr. John Young presiding, others present being Messrs. J. F. Dewar, A. G. Forrest, A. Sloan, J. Winter, and the secretary. Mr. Smeaton was unanimously elected president, and Messrs. J. McLay, J. Young, A. G. Forrest, J. Hector, and A. G. Cameron vice-presidents for the current year. The under-mentioned gentlemen were elected to membership:—Messrs. D. Graham and R. Foster (Glasgow), R. T. Jack (Edinburgh), and W. B. Mackie (Aberdeen). Will members please note that subscriptions for 1910 are now due, and should be forwarded early? They are also requested to remember the special prize fund, which it is most desirable should cover all expenses in connection with club show. The committee desire the club's patronage distributed over the whole of Scotland, if at all possible, and I have to invite applications from secretaries of confined shows where the ten-mile radius is in operation, and eight of whose members are members of the S. P. C. I shall also be pleased to supply any information to intending members.—J. BROWN, Sec., 97, Petershill Road, Glasgow.

NEWCASTLE C.B.S.

Monthly meeting held May 5th. The following gentlemen were admitted members, Messrs. H. Twist (Felling), Hall (Ashington), McGinn (Walker), W. Rowell (Blyth), and Maddison (Gateshead). Letters were read from Mr. Raynes, Secretary of the Cage Bird Union, and Mr. Vanner, who has resumed membership. The classification for the Nest feather Show was next taken; it was decided to add another class for Norwich and Yorkshires, and two for Borders. The British birds were left as last year, but house-moulted birds may be shown as well as field-moulted ones. In the foreign bird classes the Goldfinch or Bullfinch class was omitted, and the rest divided into three classes—seedeaters smaller than Cardinals, ditto Cardinal or larger, and Softbill. It was also proposed that we engage the large Co-operative Hall for the occasion; this is an ideal place for a show, and we hope to make our Nest Feather Show the equal to many of the smaller autumn shows. Decided, that we purchase another silver cup, so that the Canaries have one cup and the British and Foreign the other. Decided, to have annual pic-nic on Race Thursday, June 23rd, place and details to be decided by committee. The attraction of the evening was an egg food competition, in which seven members took part. Two medals were provided and the non-competitors acted as judges. Mr. Atkinson was nominated scrutineer of votes, and Mr. J. Curry timekeeper. Mr. Tomlinson, the first competitor, used bread crumbs and egg; the bread he crumbled on paper, then put it into a basin, passed the egg through a sieve with a knife, and mixed the whole together with a fork—time, 2min. 45sec. He explained that when giving it to his birds he spread a little maw seed on top, and his results during the past seasons had been 29 young from 4 hens, 50 from 8, 50 from 8, and this year he had 10 with 36 and 3 sitting; his green food was dandelion. Mr. T. Robson came next; he uses egg and tea biscuits. He never uses all the white, but discards about half of it; presses the egg through a wire sieve with his fingers, then presses the biscuit through, mixes them together and passes both through sieve together. Mr. R., explained that though he had not great success to record as regards numbers, yet he found that his birds liked the food as he prepared it, and ate it all up. He used Huntley and Palmer's tea biscuits because he found they crumbled nicely—time, 2min. 40sec. Mr. W. Curry, who came next, uses a mincing machine, which comes in handy for mincing up all the cold meats. (Mr. Atkinson here remarked that after he had used their mincer they couldn't get the meat to go through.) Mr. Curry's food consists of egg and rusks. He puts the whole of the egg through, including the shell; then the rusks, which clean the machine, and finally mixes the whole in a jar with a little maw seed. What rusks are left are saved for the little Curry's (to be)—time, 2min. 30secs. Mr. W. Smith uses bread without yeast, which he gets from the butcher specially prepared for the birds (not for German sausage). He mixes the egg and bread with a potato masher, then passes the whole through perforated zinc sieve. He finds the birds eat more of this when it is prepared with the special bread than when prepared with biscuits or ordinary bread; he mixes a little maw seed—time, 1min. 50sec. Mr. Currah, the Chairman, came next; he mixes his egg and the same kind of bread as Mr. Smith with a round stick in a jam jar, then passes it through a sieve. The beauty of Mr. Currah's egg food is its extreme richness. He explained that he never allowed the eggs to boil, but to simmer for 20 minutes; it was then clear and bright, and there was no darkness round the yolk. He considered that cooked this way it was more easily digested; the birds ate it readily, and he had no sweating hens and no young with diarrhœa in nest. Mr. Gillespy passed his egg through perforated zinc followed by bread on to a plate, and mixes both with his fingers. He has used it successfully for 40 years. It keeps sweet in the hottest day of summer. He never mixes seed with his egg food. His green food is seedy chickweed, or, failing that, young lettuce. Mr. Crawhall was next. He uses egg and bread, which he passed through a sieve with a knife, and mixes the whole together with a fork, adding a little sugar and maw seed. He boils his egg for 10 minutes. By so doing, he said, you get the yolk clear as Mr. Currah does; but if boiled longer it darkens. His method is to use two parts of egg to one of bread. Mr. Curry's method and result were considered the best, and he was awarded the gold-centre medal. Mr. Robson won second, taking the silver medal. The competition aroused a great deal of enthusiasm, and we hope to have a washing competition on similar lines in the autumn. Mr. Currah mentioned that one of our members (Mr. Maddison) was ill and unable to be with us, and he knew that we all would wish him a speedy recovery, and hope he would soon be in his old place again. He also mentioned that one of our oldest members and most regular attenders had been reduced very much in circumstances recently through lack of employment, and suggested that we might make a small contribution to help to alleviate his trouble. A sum of 10s. was collected for our distressed brother. Votes of thanks concluded the meeting. Any who have forgotten to forward their subscription should do so at once, as the time has expired and the committee cannot grant much longer extension, except in the case of those who are ill or out of work, who should communicate with me or one of the committee as soon as possible.—T. C. CRAWHALL, Hon. Sec.

KILSYTH FANCIERS' ASSOCN.

Meeting held on May 4th, President Irvine in the chair. Consideration was given to the classification in the various sections. Border Fancies will have 14 classes, Norwich 12, and British birds 20, with the usual selling and extra classes. Mr. W. Haddow (Hamilton) will judge the Borders, but the other judges are not quite fixed.—A. D. DUNCAN, Sec.

CHESTERFIELD AND DIS. C.B.S.

General meeting held April 23rd. It was decided to fix radius at eight miles, and subscription at 2s. 6d. annually, new members to pay their subscription on admission. Committee were appointed to draw up rules to be submitted at general meeting to be held May 21st at 7.30, headquarters, Queen's Head, Gluman Gate. New members cordially invited.—C. H. NAYLOR, Hon. Sec.

BLAYDON-ON-TYNE & DIS.C.B.S.

At the usual monthly meeting there was again a large turn out of members, when, after the usual business, the members took the schedule for next annual show, and considered same. They ultimately decided to have 48 open classes, all prize money guaranteed, whether there be competition or not. Two new members were proposed. The reports of the various members as to their success this breeding season are not very satisfactory; so far, the cold weather has played havoc among the pairs.—GEO. HARVER, Sec.

CITY AND SUBURBAN A.C.B.

Meeting held on April 25th, Mr. A. W. Curtis in the chair. Messrs. C. F. Ayres and F. Bassett were elected members. Letters were read from the secretary of the National British Bird and M.C. (welcoming the members to their annual outing) and Mr. Murton Gill (on his inability to take part in the recent cricket match). The quarterly statement of accounts, ending April 1st, showing an income of £62 0s. 1½d., an expenditure of £33 15s. 5½d., with a cash balance of £28 4s. 8d. was confirmed as read. A handsome pair of silver-plated stag horn handled fish carvers in leather case, presented by Mr. P. H. Harris, was on view, the same to be competed for at the young bird show July 2nd, for the most points gained by a lady other than 1st, 2nd, or 3rd prize in the British section. A letter expressing the Association's thanks was directed to be conveyed to Mr. Harris for his generosity. A scene of lively satisfaction prevailed upon the secretary announcing that he had been greatly honoured by a request from the Hon. Mrs. Bourke to accompany her to assist in the purchase of two cups for presentation in the British Softbill section at the annual show. The Chairman then introduced Mr. Wesley T. Page to deliver his lecture upon Foreign Frugivorous Birds. At the close questions were asked by Messrs. J. Chard, A. W. Curtis, C. Prior, W. Shepherd, and V. Wynn. A hearty vote of thanks was accorded Mr. Wesley Page for his unusually interesting lecture, on the proposition of Mr. C. Prior, seconded by Mr. Shepherd, and supported by V. Wynn. Mr. Page replied in a few well-chosen words. A vote of thanks to the Chairman closed a delightful meeting.—VICTOR WYNN, Hon. Sec.

HOLYWOOD AND DIS. C.B.S.

First annual meeting held in the society's rooms, Old Masonic Hall, on May 3rd. There was a full attendance of members, and a set of new rules had been adopted. Further, as the society seemed to be in such a flourishing condition, both numerically and financially, it was unanimously decided to hold the first show in Holywood Town Hall on November 5th, open to all breeders and fanciers in Holywood and district. Any further information regarding same may be had from me.—FRED COLE, Hon. Sec., 7, High-street, Holywood.

GRANTHAM CAGE BIRD SOCIETY

Monthly meeting held at headquarters, Black Dog, on May 4th, when there was a good turn-up of members. After the business, the medals for most points were presented by Mr. Kirkby. The winners were: Messrs. Allen, Kettle, and Ratcliff. The next meeting will be held the first Wednesday in June, when it is proposed to hold a class for Yorkshires and one for Goldfinches; each member will receive a voting paper, and the winners will be the birds that get most votes. The meeting will commence at 8 p.m. prompt, and all fanciers are heartily invited. There is room at our place for 100 members. —W. RATCLIFF, Sec.

QUEEN'S PARK (Glasgow) AND DISTRICT C.B.S.

Usual monthly meeting held Marie Stuart Halls, Crosshill, on April 29th, Mr. R. Thomson presiding. The following classes for the First Feather Show, which is to be held on 25th June, were arranged: Norwich, 4; Borders, 2; Yorkshire, Crest, Crestbred, Canary A.V., and Mules or Hybrids. Any member or friend wishing to give a special for this show might kindly communicate with the Secretary as early as possible. The rules of the club were gone over and amended. It was arranged to have a social evening in Robt. Short's Restaurant, 441, Victoria-road, SS., on May 19th, at 8 o'clock p.m., in view of one of the members leaving for Australia. It is hoped there will be a good gathering of members and friends.—ROBT. HEGGIE, Sec.

SOUTHALL AND DISTRICT C.B.S.

Annual general meeting held at St. John's Schools on May 2nd. The officers were elected as follows for 1910-11:—President, Rev. F. Roberts; vice-presidents, re-elected en bloc, viz., Messrs. J. Robson, C. A. House, F. Easterling, E. Cogswell, W. A. Phipps, and C. Huxley; chairman, Mr. A. E. Argyle; treasurer, H. J. Hiveson; committee, Messrs. Bamber, Cooper, Huxley, Fletcher, Kidd, Morgan, Neal, Phipps and Timberlake; secretary, T. G. Jeffery, The Aviaries, Southall. Votes of thanks were passed to donors for subscribing to the funds also a hearty vote of thanks to our President for the free use of schools for meetings and the reduced fee for hire of hall for our annual show. The balance sheet was held over until next meeting. The date of young stock and Finch show was fixed for June 27th, when we hope to get Mr. Robson to judge and give us a lecture.—T. G. JEFFERY, Hon. Sec., The Aviaries, Southall.

SHEFFIELD C.B.S.

Usual monthly meeting held in the Wentworth Cafe on May 5th, Mr. A. Bradshaw (president) in the chair. It was decided that Mr. Drabble judge Yorkshires and Mr. Oxley Norwich at the table show for novices next month. The Secretary announced that he had been successful in getting Mr. Browning as judge for the nest feather show. Messrs. Godfrey and Woolhouse were elected stewards. It was passed that birds be at the show by two o'clock. Also carried that no birds be allowed to compete that come in after two o'clock. We trust all members will please take notice of this, and get their birds there in time, as we should not like anyone to have the disappointment of not having their birds judged. Messrs. Bradshaw, Bower, Dutton, Kelly, and Lockwood were elected a small sub-committee to see that bills announcing the nest feather show are distributed in the Heeley district. It was decided that all pay to come in the show. The following members promised specials: Messrs. Crookes, Hemmings, Memmott, Scott, and Woolhouse. After the ordinary business Mr. Hemmings opened a discussion on colour-feeding, which proved to be very interesting. He dealt first with breeding for colour and then with feeding for colour, giving us what he thought to be the best way to secure both. Several members joined in the discussion, and the meeting closed with the best thanks being given to Mr. Hemmings for his very able remarks.—J. WOOLHOUSE.

CINNAMON-MARKED YORKS C.C.

Committee meeting held on April 16th at the Market Tavern, Bradford, Mr. W. Richmond (president) in the chair. The secretaries were instructed to write to the G.N. Railway Co., Leeds, with a view to furthering a claim made by one of our members (Mr. J. Wilcock, Eccleshill) for the loss of a bird supposed to have been stolen whilst in transit. It was understood that the secretaries of the other specialist clubs, and of the Yorkshire Union, were likewise writing in unison, with a view to obtaining a satisfactory result, and it is hoped that by this method the claim may be brought to a successful issue. A number of suggestions were made and discussed with a view to clearing the ground somewhat for the annual general meeting on May 14th at 5.30, at the Market Tavern, Bradford. It was decided that the following should be brought forward:—(1) That we ask our members to form a junior novice competition, to be run in connection with the novice classes at the Y.U. shows, in consequence of the extension of classification (novice) at these shows. (2) That we recommend members to give patronage to at least three representative shows outside Yorkshire with a view to still further popularising the cinnamon-marked bird. (3) That Rule 13 do not apply to the Crystal Palace Show (this rule states that "there be a different judge for each show where our patronage is given.") (4) That "starred" birds only count points in our various competitions. The secretaries hope to present a very favourable report. The membership is now about 270, showing an increase of over 100 over any previous years, whilst the financial position is sound considering the large expenditure incurred during the year. A few subscriptions are still outstanding, and it is hoped these will be paid before the close of the meeting. The following new members will be proposed:—Messrs. W. R. Angear (West London), L. C. Casey (Bowling), S. England (Llandudno), J. Firth (Bradford), J. S. Hartley (Leeds), J. Hodgson (Skipton), J. Naylor (Naylor and Blakey, Brighouse), J. Smith (Bradford), F. Studd (Bolton, Bradford), and H. Worsnop (Bradford). Against these we have to record nine resignations. We hope next season will be even more successful, and for that reason we hope every member will make a special effort to be present. The secretaries will be pleased to forward full information to all intending members, and we hope and expect to top the 300-mark very substantially. Applications for the club's patronage will now be welcomed. The Bradford City and Lalsterdyke Societies have already applied.—GARNETT AND TOWERS, Hon. Secs.

HIGHGATE, HAMPSTEAD C.B.S.

Meeting held at Spencer Hall on May 5, at 8.30. In the absence of the chairman, Mr. Gardner, Mr. Dann was duly elected chairman for the evening. The following were elected members: Messrs. W. Staines and W. Haste, and Messrs. W. Spencer, Smith, Evans, Hardiman, and Mrs. Hawes were nominated for membership. The schedule for the British Bird Show was drawn up, and several special prizes were promised, the date being May 26th, with Mr. W. Shakespeare as judge. After the business, Mr. A. Silver read a very interesting paper on "Birds and Bird Keeping," quite new and distinct from the ordinary style of bird lectures, after which Mr. Silver was asked several questions. Will members kindly forward subscriptions at their earliest convenience?—CHAS. W. LAW, Hon. Sec.

MID-RHONDDA AND DIS. C.B.S.

Meeting held at the Gwalia Restaurant, Tonypandy, on May 7th. The chair was taken by Mr. Legg, of Porth. We were honoured by the presence of our President, the Rev. T. R. James (Vicar), who is taking a keen interest in our new society, and he was sorry that he could not stay through the evening, important duty calling him elsewhere. We had a very good meeting, making two new members. The radius for membership is from Pontypridd to Treherbert, including the Ferndale Valley to Mordy and Gilfach. I am sure that with such a radius as this, and so many fanciers in the district, we shall have a splendid society. Will all fanciers send me their names and help to make this society a success? We have a grand centre here to hold a show with, two railway connections close to our town.—G. YEO, Hon. Sec., 1, Upton-terrace, Penygraig, Rhondda.

MANCHESTER & N. COUNTIES OS

Meeting held at headquarters May 2nd, Mr. Atkinson in the chair. After the general business Mr. C. Houlton (St. Helens) gave us a very interesting and instructive lecture on Hybrid breeding, which he dealt with in a thoroughly practical manner, telling us the best birds to use for both light and dark Canary Hybrids, the different crosses with British birds, etc. A lot of questions were asked, which the lecturer answered to everyone's satisfaction. All present were sorry when it came to closing the meeting, which we did with a hearty vote of thanks to Mr. Houlton, to which he suitably replied. The next meeting falling on Whit-Monday, it was decided to hold same on the following Monday, May 23rd, when I hope we shall have a good attendance to go into the first feather show business.—H. BOOTHMAN, Hon. Sec.

BATTERSEA (Open) C.B.A.

Monthly meeting held May 4th, at headquarters, 340, Battersea Park-road. Letters were read from Mr. S. Baker and Mr. Carr, of the National B.B. and M.C., with reference to their annual outing. Several members present promised to join them. It was decided to have two open classes at the forthcoming young bird show—one for Yorkshires, and one for Norwich. The prize money was fixed at 12s. 1st, 8s. 2nd, 4s. 3rd, for 2s. each entry. The date fixed was June 18th; admission free. It was also decided to advertise the event in CAGE BIRDS. The two judges appointed (Messrs. J. Robson and Patrick) for the autumn show, were approved of, and an extra judge is to be appointed if we are unable to obtain the Latchmere Baths. It was pointed out by one of last year's judges that it was more a question of room than of an extra judge, when he was approached on the matter. It was also decided to go and view the Baths as early as possible; they are conveniently situated close by rail, tram, and 'bus. Messrs. T. Goymer and W. J. Honeysett were appointed delegates for the London Federation. Mr. Honeysett promised 10s. for anyone making six fully paid-up members for 1910 from now, and was thanked.—W. J. HONEYSETT, Chairman.

ASHTON-U.-LYNE AND DIS. O.S.

Monthly meeting held May 3rd, Mr. Foxall in the chair. The Chairman said he was pleased to see so many friends present. He called on Mr. H. Kelsall to give his demonstration on cage making. Mr. Kelsall began by telling us the kinds of wood most suitable for cage making. Then he described how to get the wood in the cheapest way, so that instead of paying about 2d. per foot, it could be bought to come out at a little over 1d. This was done by buying a deal and having it cut afterwards. He showed us the way to glue two pieces of wood so that the joint would not break. Here Mr. Kelsall introduced to us a very useful preparation of glue; it was put on cold, so that you did not want the glue pot constantly on the fire. This was a most useful hint, and there was a big demand for paper and pencils, as every one seemed anxious to get the recipe. Mr. Kelsall also gave the most suitable sizes, as he considered, for stock, single breeders, and double breeders. When he had completed the box he gave a brief description of a frame and his methods of making a wire front. After this a good many questions were asked, which were answered to the satisfaction of all. And everyone voted that we had spent a most enjoyable and profitable evening. The following new members were admitted: Messrs. J. McFarlane and W. Hatton. Our next meeting is an open "question" night, so we shall be glad to see any fancier, whether a member or not, especially novices. Bring your questions.—H. FODEN, Sec.

FALKIRK GOOD INTENT C.B.A.

Monthly meeting held in the Oddfellows' Hall, on 30th April, Mr. J. Hunter presiding. A few more members were enrolled. The principal business of the evening was a bird-washing exhibition, given by Mr. Jarvie. The exhibition proved most instructive, Mr. Jarvie explaining how the different parts of the birds were washed. It was altogether a most successful evening. Next meeting 28th May.—W. CLUBB, Sec.

"THE SECRETS OF HYBRID BREEDING."

REVEALED AND EXPLAINED.

By Many Notable Mule and Hybrid Breeders.

A book in which are reprinted from the columns of "Cage Birds," a number of articles and lectures on this most interesting branch of bird keeping.

Among the contributors are such well-known breeders as Messrs. R. Colton, W. H. Vale, C. Houlton, C. J. Ward, J. Beswick, G. Lander, T. A. Kinch, T. Smith, etc.

It is one of the most useful of handbooks, and meets a long-felt want among beginners in Hybrid breeding.

Price 1/2 post free.

The Publisher "CAGE BIRDS," 154, FLEET STREET, LONDON, E.C.

BOWHILL O.S.

The members met in the hotel, Cardenden, Mr. Bremner in the chair. The Chairman asked to be allowed to say a word or two before proceeding with the business of the meeting, to express, on behalf of the members, the deep sense of the great loss which not only the United Kingdom, but the whole Empire, had sustained by the death of our Gracious Sovereign. All the business of last year was agreed to, and the officials and committee were appointed. Mr. J. Bremner was elected president, Mr. W. Fodds secretary, and Mr. W. Spence treasurer. It was decided to hold the next show on December 17th. Eight judges were selected. Our society is favoured with a splendid hall, and the members are making every endeavour to bring their show to the top. The County of Fife is supposed to have more Ornithological Societies than any other county in Great Britain; its societies number 17.—WM. DODDS, Sec.

READING AND DISTRICT C.B.S.

Monthly meeting held at Palmer Hall on May 4th, there being a very good attendance. We had the pleasure to begin it by electing Messrs. Fennel, Hills, Bristow, Shepherd, and Horseman as new members. The schedule for the first feather show on July 13th was then discussed, and it was decided to run 16 classes, viz., Norwich 3, Yorks. 3, Crests 1, Crest-bred 1, A.O.V. 1, British 5, Selling 1, Foreign 1. Mr. Yates has kindly offered to judge. Entry fee to be 6d. per bird. The schedule for show in November was then arranged as follows:—Norwich 5, Yorks. 5, Crest 1, Crest-breds 1, A.O.V. 1, Mules 2, British 5, Selling 1, Foreign 3. During the meeting several good prizes were promised. We had a visit from Mr. Holliday, the secretary of the new Oxford C.B.S. and the opportunity was taken to thank him for the specials he had given us, and to wish his society a prosperous future. We feel sure that with him as secretary they cannot help but go ahead. Several of our members gave their names in as members. A very businesslike meeting was then brought to a close. Any more fanciers wishing to join us would greatly oblige me by sending their names in as soon as possible, so as to enable them to compete in the July show.—W. H. PYKE, Hon. Sec.

DULWICH AND PECKHAM C.B.S.

At our meeting held on May 8th, a good number of members and friends met to hear Mr. C. J. Richardson's paper on "The Breeding and Exhibiting of the Norwich P.H." In the absence of the Chairman, Mr. J. Hazell was elected to fill the position for the evening, and he, after the ordinary business had been dealt with, called upon Mr. Richardson for his promised paper. Mr. Richardson said he felt very reluctant to undertake the task, but being pressed by the worthy Secretary he had at last consented, and would therefore do his best. Mr. Richardson dealt very thoroughly with the subject in hand, and as he spoke of his own practical and successful experience, was able to give his audience many useful hints, in the breeding, preparing for show, and exhibiting the Norwich, which were very much appreciated by his audience, receiving much applause. The Chairman invited questions, of which a large number were soon forthcoming, Mr. Richardson answering every one in a very able manner. The meeting eventually developed into an open debate on the type of the bird in question, the following gentlemen taking a prominent part: Messrs. C. W. Baker, J. W. Cranfield, H. W. Tomsett, H. Cunningham, W. H. Crackuell, Hazell, Richardson, and Hodson. In closing the meeting, the Chairman proposed a very hearty vote of thanks to Mr. Richardson, which, after being duly seconded, was carried with acclamation. Mr. Richardson briefly replied. The Secretary here announced that the usual country ramble had been decided for Sunday, May 29th, to Dorking. The usual vote of thanks to chair closed the meeting.—W. HODSON, Hon. Sec.

BRISTOL C.B.S.

Monthly meting held at headquarters, City Hotel, on May 4th, Mr. W. Manley presiding over a very good attendance. It was decided to hold the annual show on November 12th. A little difficulty has been experienced in acquiring a suitable hall, but at the next meeting it is hoped the question will be decided. For the ramble on Saturday, May 28th, a letter was read from Col. Gibbs, M.P., granting the members permission to visit Tyntesfield. Fifteen members have already given in their names, and it is hoped others will do so. A brake will leave the Tramway Centre at 2.30 p.m., and final particulars will be announced in due course. After much discussion on the advisability of remaining affiliated to the Cage Bird Union, a vote was taken and it was decided to withdraw from the same. Mr. R. G. Clark then gave his promised washing exhibition, and it would have been impossible to have found four dirtier birds than those the lecturer was supplied with. After explaining how to hold the bird, which was plunged up to its neck in bowl No. 1 to allow the feathers to get well saturated, he pointed out that he always started tail first, and by a good supply of soap, lightly rubbed, the bird would soon show its true colour. In a very short time the first bird was ready and in the drying cage, and on questions being invited, quite a number were forthcoming, which were ably answered. The four birds were quickly in the drying cage. Mr. Clark said he preferred soda to borax as a water softener, and that the birds dried better before lamps than before the fire. By this time the first two birds were ready, and were handed round for inspection. On the proposition of Mr. Manley, seconded by Mr. Buckland, a hearty vote of thanks was passed to Mr. Clark, who suitably replied. For the next meeting Mr. Fletcher has kindly promised to give a paper on his experiences of Hybrid breeding.—Miss L. G. BYERLEY, Hon. Sec.

CODNOR PARK AND DIS. C.B.S.

Monthly meeting held at Portland Arms, Jacksdale, on May 7th, Mr. B. Simpson chairman. A good number of members showed up. Three new members were enrolled, which brings our total to 26, which speaks well for this young society, seeing we have only been formed five months. The arrangements for the open first feather show were all settled. It was arranged to hold a members' F.F. show on June 4th, Mr. J. Driver to officiate as judge. We also arranged to have a judging competition at this show, each competitor to pay an entry fee of 2d., which will go towards making two prizes to those who judge nearest the judge's awards. After business the Chairman called on Mr. J. Driver to speak to us. He had kindly come at the secretary's call to give a lecture on mating and rearing young Canaries, which was much enjoyed by all. When the speaker had finished his lecture, he was bombarded with questions, which he quickly answered. Mr. Martin: Can Mr. Driver tell me what is the best remedy for "going light"?—Bread and milk (scalded milk); also take seeds away and clean cage out well; then sprinkle the bottom of cage with good clean sawdust. Mr. Ash advised mixing bread, milk, and treacle together, and placing on the fire in a saucepan; stir until brought to a boil, when you can give it to the bird when cool; he had had good results from this for young and old birds. Mr. Driver couldn't fall in, he said, with the idea of treacle, as he considered it too "opening." Mr. Holmes asked if milk sop would not be improved by adding maw seed?—I do not recommend it for young birds; for old birds, yes. Mr. Ash: What was the best for hens that wouldn't feed?—Scalded rape. Mr. Simpson considered rape soaked in cold water was best, as it didn't go sour so quickly. Mr. Driver: Scald it the night before wanting to use it, and no more than is wanted for one day. Mr. Martin: Is watercress a good green food to give to young?—Mind and know where it has been grown; if spring watercress, yes; if short watercress do not give it unless you are aware it has come from the spring, as I had fatal results one season from the use of watercress. Mr. Holme proposed a vote of thanks to Mr. Driver for giving such valuable information. Mr. Driver thanked the members for their remarks, and was pleased to see that we were making such good progress.—J. H. MITCHELL, Hon. Sec.

CHELTENHAM C.B.S.

A large number of members and several visitors attended on April 20th to hear a paper by our old friend, Mr. J. H. Payne, on "Various Breeds of Canaries." Mr. Payne prefaced his essay with some remarks re our society, which he was pleased to see was in such a flourishing condition. In his opinion a society, to be successful and draw its members together, must do more than hold a few business meetings during the year, culminating in an open show, but should provide a series of table shows, lectures, etc., such as he saw done by the Cheltenham Society, and it gave him great pleasure to do what he could to help. Proceeding to deal with the subject in hand, Mr. Payne touched on the following breeds: Crests, Norwich, Yorkshires, Borders, and Cinnamons, and enlightened his hearers, many of whom were novices, on the various points essential in a show specimen, and also gave some valuable hints on the selection of breeding pairs. At the end of the paper the Chairman said the meeting was open for discussion, and that Mr. Payne would be pleased to answer any question that might be put. Most present had something to ask, and Mr. Payne was kept busy for some 20 minutes in replying. A very hearty vote of thanks was proposed by Mr. Pounsett to Mr. Payne for his kindness in coming over from Gloucester to give us the highly interesting and instructive lecture we had listened to. This was enthusiastically passed with musical honours.—A. S. TREASURE, Hon. Sec.

LEYTON AND DIS. C.B.A.

Monthly meeting held at the Constitutional Club, High Road, on May 2nd, Mr. C. R. Carr in the chair. There was a good muster of members and friends. The Chairman announced that the annual ramble was fixed for May 28th, the route again being through Epping Forest; about 30 members at once gave notice of their intention to accompany the party. Mr J. S. Clarke was then called upon to give his promised lecture on "Septic Fever," and was received with applause. Everyone present gave the lecturer his best attention. In the course of his remarks Mr. Clarke dealt with the symptoms of the disease, which, by the way, were seldom seen much of, the first symptom being almost invariably followed quickly by death. He also dealt with various remedies that had been used in an attempt to fight the disease, but held the opinion that the best cure was to fumigate the bird room with sulphur, and after leaving it for a sufficient time, clear out all the cages and fittings, and make a bonfire with them; we presume the dead birds as well. Then thoroughly cleanse every part of the room with disinfectant, and make a fresh start with new stock and cages the next season. A good discussion followed the lecture, many questions being asked and ably answered. A hearty vote of thanks was accorded Mr. Clarke for his very interesting lecture, to which he responded in his usual happy way. A vote of thanks to the chairman then closed a very pleasant evening.—FORSE and SON, Hon. Secs.

The Stock Book.

Our Invaluable "Breeding Room Register." By G. E. Weston.

Post free, 7d.

A well-known fancier has said of it:—"It makes bird breeding easy." This book no breeder of birds can possibly afford to be without. It simplifies the operations in the bird-room, and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred—keep account of their strong and weak points. It contains both Pedigree, Breeding, Young Bird, and Show Registers of simple and unique character, in addition to useful account pages, and many invaluable "Hints for Emergencies."

CAGE BIRDS, 154, Fleet Street, London, E.C.

Under the White Rose.

YORKSHIRE County British Bird and Mule Club also held their general meeting on Saturday last, the attendance being fairly good, that is, considering the large number of meetings that have been held lately, and also that the Y.C.C. was having theirs during the same hours. The balance-sheet shows a debit balance, caused to some extent by the society giving more away than they can really spare, and by members who have not yet sent in their cash for 1909-1910; hurry up! The present secretary, Mr. W. R. Myers, has been forced to resign his position owing to pressure of business, and a successor was not available at the meeting, but one was picked out who, should he decide to take it, would do well in the interests of the club. Several new members were proposed and accepted; they are enthusiastic and sound exhibitors.

BRADFORD EAST O.S. have issued their syllabus of members' shows for 1910. Three First Feather and three old shows are being provided, with novice and extra novice sections at each show, so that the rawest of the new members can show with the assurance that he will only have to compete against others of his own calibre, which doubtless contributes to some extent to the prosperity of the society. They work them up gradually, then turn them loose at the open shows.

CM.Y.C.C. hold their annual general meeting to-day (Saturday), and a good muster is expected. Novice members should try and attend, as business of very great importance to them is on the slate, and if they are there they can have a voice in the matter.

LAST week-end none of the Specialist Clubs were holding meetings of any description. Therefore I took advantage and had a jaunt into the country to see how the wild birds were faring. We took train for Skipton, where we arrived at 2 p.m. This is a most convenient centre. We made our way along the canal bank for some distance, and then branched off into the fields, examining the thickets and hedges on the way. The first nest to fall under observation proved to be that of a Song Thrush, this containing one egg; then a Blackie's, almost finished building, short only of a little lining. Also several more were noted, but we were not in positions that were accessible, so that we passed on. A little further on, high up in a hedge at the roadside, I espied what looked like a wee bunch of moss. Up I went and found it to be, as expected, a neat nest of the Chaffinch, all completed ready for eggs, but for my pains I got severely scratched, thorns and rose briars being very thick and very prickly round about, necessitating a bath at the next watercourse to remove the blood from my hands. A little further on we came across a dead Rook behind a telegraph post at the roadside, but not having time for a post-mortem examination as to the cause of death, we passed on. Again coming on to the canal bank, a good lot of Chaffinches were hereabouts, some very smart and good-coloured ones amongst them.

TAKING a turn to put us on the road to Malham, we were soon in the noted roads for birds. Each side of us were good big thorn trees, plenty of undergrowth, primroses galore, cowslips, violets, and hosts of other lovely wild flowers; then large towering trees in the fields, with Rooks and Jackdaws in their tops, and also Blackbirds, Song Thrushes and Starlings pouring out their melodies, appearing to answer each other from far and near. Also a few of the smaller birds were to be seen flying in and out of the hedge, but they were very shy, and we could not get near them. On peeping over a wall I was rewarded by getting a splendid view at close quarters of that little gem, the Redstart, flitting from twig to twig, and noticed that peculiar springlike flicking of the tail with every movement.

AT a spot a little further on I have sometimes seen the Heron, but although a good look-out was kept, we were not rewarded. But a couple of Yellow Wagtails were disporting themselves on some boggy ground near the river, and several lots of the Pied variety were seen. Then as we were getting nearer Malham and its wild moors the voice of the Pee-wit was heard on every side; also Stonechats were noted, and higher up still we came across several examples of the Wheatear, these latter in the wilder parts. Climbing above Malham on to the very tops, a marvellous view was obtained—moors everywhere, not a soul or a house in sight, and nothing but the moor-birds, sheep or cattle for company, until we came to the top of the hills overlooking Wharfedale, with the villages of Grassington and Threshfield in the distance. On the way down we heard the Cuckoo several times, and saw many birds, including the Skylark pouring out his evening song as though glad of the little sunshine before the dark of night set in, before we started off to Grassington Station for home after a walk of 23 miles through some most lovely and varied scenery.

FANCIERS' FESTIVITIES.

Dulwich and Peckham C.B.S.

The "Reindeer Hotel" Club Room—the new headquarters of the Dulwich and Peckham C.B.S.—in the Rye Lane, Peckham, presented a very animated appearance on May 10th, on the occasion of the grand concert held with a view to augmenting the funds of the society. There was a very large attendance indeed, and we are not sure there were not more ladies present than gentlemen. Mr. John Bright Crowe occupied the chair. The company sat, as far as possible, around fairy-lighted tables. Incidentally we may note that the room is an ideal one in every respect—light, cleanliness, capacity, convenience, and all—and we congratulate the society on the acquisition of such enviable headquarters.

The chairman in opening the proceedings made a few remarks anent the late King Edward's demise, and stated that though a function such as the present one would seem somewhat out of place in view of the national mourning in which they were participating, all fears had been set at rest by the expressed wish of the new King to the effect that all social functions should go on as before. The company were asked to show their sympathy with the Queen Dowager and Royal Family by rising from their seats.

The programme was an excellent one, reflecting very considerable credit on Mr. H. Wallace Tomsett, under whose able direction it had been arranged. Mrs. Gertrude Brown gave promise of her accompanying ability by her pianoforte solo, "The Entry of the Gladiators." Sentimental songs were ably sung by Mr. W. Hooker ("Out on the Deep"), Mr. R. Robertson ("The Bandolero"), Mr. H. Nicholas ("My Queen"), Mr. Stephen Moorcroft ("Come into the Garden Maud"), and Mr. Ralph Morrison ("Thora"); humorous songs by Mr. Ern Bewsey ("Down where the Breezes Blow") and Mr. A. E. White ("We've all been doing a bit"); and a capital song capitally sung by Miss Ruby Helene. Miss E. and Mr. H. Nicholas sang as a duet "Love's Summer Land." All the abovenamed contributed later on in the evening, and their efforts were very much appreciated. Professor Donn, of the Magic Circle, amused the company for a long time with various conjuring tricks, etc., which "went down" well. The last remark, in fact, applies to the whole affair, and we were informed that both financially and numerically the concert proved a huge success, which was, of course, most gratifying to Mr. W. Hodson, the secretary, and Mr. Tomsett, the director.

The Lancashire and Lizard F.A.

The annual tea and social in connection with the presentation of cups and medals were held on May 7th, at Mr. Tom White's, Wellington Hotel, Hyde. In spite of the rough weather, a good number of members and their wives and friends put in an appearance from Glossop, Oldham, Shaw, Denton, Colne, Manchester, Middleton, Withington, Rawtenstall, etc. It was indeed a pleasant surprise to see so many ladies present, including:—Mrs. Salway, Mrs. Ridgard, Mrs. Swaiwell, Mrs. Dewsnap, Mrs. Hordern, Miss Fuller, and Mrs. Rukin at the tea table, Mrs. Hampshire joining us later in the evening. The principal event of the evening was the presentation of cups and medals. The Lancashire Challenge Cup won by Mr. Wm. Adams was presented to Mr. Swalwell, who stood for Mr. Adams, who was unable to attend, Mr. Garner making the presentation in his usual genial way. Mr. Hordern came next on the list for the Lancashire novice gold medal, and he suitably responded. Mr. Dewsnap was presented with the Lizard Challenge Cup, which becomes his own property, he having won it three times in succession, Mr. Garner again doing the needful. Mr. Dewsnap replied in an appropriate manner. Mr. J. Dewsnap was called upon to act as deputy for Mr. Walter Dewsnap, who was an absentee through some previous engagement. I am pleased to say that in addition to confirming the election of Messrs. Compton and Stansfield as members, we had three new members to propose in Messrs. H. Oliver (Glossop), T. White (Hyde), and T. Mason (Withington), and Messrs. Dewsnap and Stansfield promised us some more new members for next meeting. I am afraid the ladies were disappointed in the dancing and singing part of the evening, but we will try and remedy that at our next attempt. It was decided that we have a special meeting on June 4th, at the Wellington, Hyde, to discuss the question of Lancashire and Lizard cups or trophies for the coming season. All members are invited to attend, and it is hoped that they will try and keep this date open, so that one and all can have a voice in the matter, and make the meeting a representative one. There is every appearance of the Lancashire and Lizard Canaries becoming more popular in the coming season, so that fanciers of these two varieties would do well to come and join us and help to make the L. and L.F.A. what it ought to be—one of the best. Mr. J. Rukin was presented with the silver plated cruet, presented by Mr. J. W. Ramsden, for the most points gained by birds fed on his celebrated colour-feed. Many expressions of admiration were evoked on seeing the cruet, and a hearty vote of thanks was passed to Mr. J. W. Ramsden for his kindness in giving us such a fine special. A hearty vote of thanks to our chairman concluded the meeting.—JOHN RUKIN, hon. sec.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

JUDGES OF CAGE BIRDS

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

L. ADAMS, Eagle Aviaries, High Street, Folkestone. Judge all kinds Cage Birds, Rabbits, Cats, Cavies, etc.; life experience. Terms moderate.

J. C. BARNES, 149, Duncombe Street, Walkley, Sheffield. Judge of all varieties of cage birds. Long, practical experience. Terms moderate.

J. W. BRUCE, Coldstream. Judge of all varieties of cage birds; Border and British Bird specialist. Terms moderate.

W. A. COWGILL, 115, Washington Street, Girlington, Bradford. Judge of all varieties of cage birds. Over 25 years' practical experience. Terms moderate.

J. DOBSON, 18, East Road, London, N. Judge of Canaries and all kinds of Cage Birds.

JOHN FROSTICK, Endlesham Road, Balham, S.W. Expert and Specialist Judge of British, Hybrids, and Foreign Birds. 30 years' practical experience.

GEO. GARDINER, 11, Haverstock Road, London, N.W. Judge of all kinds of Cage Birds.

C. A. HOUSE, 82, Upper Walthamstow Road, Walthamstow. Judge of Canaries, Mules, British and Foreign Birds.

E. A. LOVELL, 19, Islington Road, Southville, Bristol. Judge of Cage Birds; all varieties.

J. W. METCALFE, Reservoir Hotel, Whitefield Road, Liverpool. Judge of Cage Birds. Specialist Yorkshire and Norwich.

W. R. MILES, The Aviaries, Chichester. Judge of all varieties of cage birds. Life experience.

W. MUNDELL, 6, Carlisle Place, Manningham, Bradford. Judge of Canaries and Cage Birds.

H. NORMAN, The Eyrie, Salisbury Road, Carshalton, Surrey. All varieties of Cage Birds. Specialist Hybrids and British Birds.

J. PATTERSON, Chirnside. Judge of Cage Birds; all varieties. Wide practical experience. Specialist Border Fancy Judge.

J. H. PAYNE, 17, Northgate Street, Gloucester. Judge of Canaries, British and Foreign Cage Birds.

WM. SHAKESPEARE, 233, Kentish Town-rd., London, N.W., Judge of all varieties of cage birds. Life experience.

C. E. SILK, The Aviaries, Emsworth, Hants. Judge of all varieties of Cage Birds. Life experience.

A. E. SILK, Aviaries, Whitstable. Judge of all varieties; Norwich specialist; genuine life experience. Terms moderate.

R. TAYLOR, Lime Kiln, Preston. Judge all varieties; Norwich a speciality. Terms moderate.

HENRY TAMS, Orchard Place, Longton, Staffs. Judge of Canaries, British and Foreign Birds. Twenty-five years Breeder and Exhibitor.

S. TICKELL, 22, Honey Street, Bodmin. Judge of all varieties of Cage Birds; specialist Norwich, Clin. & Liz. Long practical experience. Terms moderate.

R. E. TOPE, Hoe Street, Plymouth. Judge of Cage Birds, Rabbits, Cats, and Cavies. Twenty-five years' experience.

W. VARDY, The Aviaries, Hucknall Huthwaite, Notts. Judge of all varieties; specialist in Norwich Plainheads. Life experience. Terms moderate.

SHOW ADVERTISEMENTS across two or more columns 7/6 per inch, column width, except to "Guaranteed" Shows, for which the charge is 6/- per inch, column width.

Secretaries desirous of "guaranteeing" a Show should apply for proper guarantee form to our Manager.

A reduction will be made for a Series of not less than Nine Weeks.

CAGE BIRDS, 154, FLEET STREET, LONDON.

CANTERBURY SHOW December 7th & 8th, 1910.

SECRETARIES PLEASE DON'T CLASH.

ST. IVES, CORNWALL

ROYAL CORNWALL AGRICULTURAL ASSOCIATION. EXHIBITION, **Wednesday and Thursday, 8th and 9th June, 1910,** of Dogs, Poultry, Pigeons, **Cage Birds,** Rabbits, Cats, Cavies, Mice and Horticulture. Over £300 in Prizes, also a large number of Valuable Special Prizes. Entries close **May 27th, 1910.** Entry forms can be obtained of Hon. Sec. **W. A. Sandrey, 4, Draycot Terrace, St. Ives.**

The members and wives of the Hyson Green (Nottingham) C.B.S., writes Mr. William Cottingham, the secretary, will visit Clifton Hall gardens and aviaries on Whit Monday, by the kind permission of Sir Hervey Bruce, Bart. I hope all members will attend. We start from Wilford Bridge at 1 o'clock.

Kindly correct the report of the Open Norwich Plainhead Club. The value of prizes allotted to the competition for Yorks. Union "Novice" Norwich members, who are members of the O.N.P.C., should be 75 per cent., not 15 per cent. as printed, of their total subscriptions.—O. MITCHELL, Hon. Sec.

Kingfishers' Ways.

Kingfishers are now to be seen upon most open sheets of water. They will soon be returning upstream to their former haunts. There is nothing in wild bird life more interesting than to watch this gaily plumaged bird diving for fish. He plunges like a stone, returns equally quick, kill his prey, and swallows it whole, always head foremost.

Twitterings.

I am appointed to judge the Radford (Notts) First Feather Show on June 4th, writes Mr. J. Bertie (Mapperley).

Mr. James Winter, of Edinburgh, has removed, we hear, from Parkside Street, to 77, Bellevue Road. Will friends and fanciers generally kindly note this?

We have arranged our third annual open show for December 17th, writes Mr. R. Bnks, secretary of the Ferryhill and District C.B.S. Will secretaries please note?

Will secretaries please note that I have moved from Clarendon Road, Shirley, to "Rockholm," Vincent Avenue, Winchester Road, Shirley, Southampton? writes Mr. E. Holliday.

I have been appointed secretary of the Darwen and Dis. C.B.S., and I shall be pleased if persons interested will kindly note, writes Mr. John V. Greenwood, 13, Avondale Road, Darwen.

We have received a contribution of 5s. for the "Preston and Flowers' Fund" from the Middlesbrough and Tees-side C.B.S., which brings the total amount received in subscriptions up to £62 15s. 11d.

I have removed from Wandsworth Bridge Road, Fulham, to 45, Overdale Road, South Ealing, London, W., writes Mr. J. P. Carr, joint secretary with Mr. Plumbridge, of the National British Bird and Mule Club.

When you ask for Ramsden's Pure Peppers, see you get them. Don't be put off with anything a shopkeeper tells you is "just as good." Ramsden's Peppers for 1910 are not equalled by any other pepper on the market.—(ADVT.)

Kindly note that we have appointed Mr. W. A. Cowgill to judge our show, open to Wales, to be held at Vaynol Park, Port Dinorwic, on August 13th next, writes Mr. Rd. Hughes, the secretary, 4, Terfyn Terrace, Vaynol Park.

HOLIDAY NOTICE.

Owing to the Whitsuntide Holidays the offices of CAGE BIRDS will be closed from Saturday to Monday next inclusive.

Will Advertisers and Correspondents generally kindly note that all matter intended for next week's issue should be posted early, to reach us on Tuesday, May 17th, certain?

We have changed the name of the Sale Open Ornithological Society, writes Mr. Jas. Lilam, hon. secretary, to the Sale and District Open Cage Bird Society. Mr. Alfred Royle (Sale) has been engaged to judge our First Feather show on July 2nd. Will all members attend our next meeting to discuss the Cage Bird Union matter?

At a special committee meeting held in the Temperance Hotel last week, Mr. James F. Dewar (Edinburgh) was duly elected to judge the cage-bird section of our show, to be held here, December 22nd, writes Mr. S. Denison, secretary of the Strathbogie P.P. and Cage Bird Association.

Owing to my having undergone a very severe and painful illness during the last few weeks, writes Mr. E. Broadbent (Sheffield), and am even now only able to potter about from one room to another. I have been very lax in answering letters; so that if I have kept any correspondents waiting unduly, will they kindly accept this explanation?

The judges appointed for the Scottish National Cage Bird Society's show to be held on December 31st, 1910, January 2nd, 1911, are as follows: Norwich, Messrs. Ferguson (Glasgow) and Holmes (Edinburgh); for Crest and Crestbred, Mr. C. Campbell (Glasgow); for Scotch Fancy, etc., Messrs. Keau (Edinburgh) and Fulton (Partick); for Borders, Messrs. Arnot (Hawick) and J. Thomson (Newtongrange); for A.O.V., Mr. J. Bailey (Bradford); for Mules, British, etc., Messrs. Cochrane, Pendrigh and Goodfellow (Edinburgh).—A. W. WATSON, secretary, S.N.C.B.S.

Mr. Geo. Harland (Hull) has had the misfortune to lose his noted unflighted yellow Norwich hen "Queen of Queens," for which at the commencement of last show season he refused £12, offered by a prominent Manchester fancier, writes Mr. Ernest R. Ridley, hon. secretary of the Hull C.B.S. The bird had a grand record on the show bench, winning the first time shown—in a class of 40 at Newcastle, under Judge Vardy; also 1st at Baydon, under Judge Battye, 1st at Hull under Judge Vardy, 1st at Gateshead under Judge Robson, and 1st at Halifax under Judge Vardy. The bird was found dead on the nest after laying her second egg last Sunday morning. Mr. Harland considered this the best bird he ever bred during a period exceeding thirty years.

OUR LATE BELOVED KING.

Bird-lovers the world over will join in a heart-felt expression of sorrow at the demise of our late King, Edward the Seventh, than whom there can never have been monarch more widely popular and well-beloved. A sportsman and a fancier in the best and truest sense of those terms, he endeared himself to the whole English-speaking race, and earned the respect of all nations. Our Empire has suffered an irreparable loss, though that King George the Fifth will emulate his father's splendid example in rulership there can be no shadow of doubt. To that gracious lady, the Queen-Mother, Alexandra, and all the members of the Royal Family, our sympathy goes out in their heart-breaking loss and time of grievous trouble.

I wish CAGE BIRDS all the success it so richly deserves. The paper is a great help to me and to my bird-keeping friends; in fact, we don't know what we would do without it.—GEO. KAY (Fort William).

I take this opportunity of thanking you for the many useful hints I have received from time to time from your valuable paper, CAGE BIRDS, which I consider to be indispensable to all fanciers.—JAS. A. SMITH (Jackfield, Shropshire).

The Guisbro' "Priory" and District Cage Bird Society will have a ramble on Whit-Monday (in Whiley's wood), and will meet at headquarters at 1 p.m., and against the Fox and Hounds at Charltons, at 1.30 p.m., writes Mr. R. Mays, hon. secretary. All are invited to attend.

As I am taking my annual holiday from May 14th to May 31st, I should be pleased, writes Mr. W. A. Gore, the well-known bird dealer, of Gooch Street, Birmingham, if you will mention in CAGE BIRDS that the mail order department of my business will be entirely suspended during that time.

That well-known Liverpool fancier, Mr. J. W. Metcalfe, was unanimously elected to judge both our Nest Feather show on July 2nd, and along with Mr. A. G. Davis, of Manchester, our old bird show on December 10th, writes Mr. John Hunt, secretary, Bootle and Dis. C.B.S.

I find CAGE BIRDS very useful, and every Saturday I look forward to receiving it as much as I do my wages. I think "Domestic Bliss in Canary-land"—your last coloured plate—is grand. I put all the "C.B." plates in my birdroom, and people who come and see my birds admire them. Wishing CAGE BIRDS all possible success in the future,—CHAS. HY. HILL (Wiveliscombe).

I beg to thank you for the great honour you have bestowed on me in depicting my Hawfinch, "Midland Chief," on the front page of your Double Spring Number. Amongst other honours this last season he won first at Manchester, L.C.B.A., Gateshead, Scottish National, and Crystal Palace. Altogether he has won over 25 first prizes in the last two seasons.—S. T. BEATY (Alderley Edge).

A show of Yorkshire Canaries will be held in the Great Horton Working Men's Club, on June 11th. This show is confined to members of this club only, and eight classes are provided. Numerous special prizes will be given. The judge appointed is Mr. Joe Wilman, the noted exhibitor of Shipley. This should be a good show as there are over 600 members. This is the first show to be held at this club.—J. HOLROYD (Gt. Horton).

It may interest some of your readers to know that while I was gathering dandelion heads on the N.B.R. Railway near Markinch I found a very fine male specimen of the Corncrake which had been killed on the telegraph wires. The weather is so very cold in this district yet that breeding is very far behind. Empty eggs and dying in shell or dying when about a week old are quite common around here.—JOHN PURVES (Markinch).

It is with great pleasure, writes Mr. Charles Nickson, of Emerald Hill, New South Wales, Australia, I write to let you know what I think of your last Christmas number of CAGE BIRDS. I think it is really beautiful. We have put up the coloured plates in our kitchen, and I can tell you faithfully that they look fine. You see we get "C.B." 13,000 miles from where it is printed. I wish all your numerous readers good luck; they cannot get or have a better paper than CAGE BIRDS, which I wish every possible success.

Societies, agents and wholesalers write to Sandiford for samples and prices of his famous colour feeds and latest testimonials. Giving £60 in specials to all societies using same. This new Royal Red has cost me 2d. per lb. more than ever before, and I guarantee it superior to any that has ever arrived in England. Mr. J. E. Davies, N.P.C. cup winner, writes to say he had the hottest birds that ever lived last season. Mr. J. Smeaton, Scotch cup winner and the colour-feeder of the N.P.C. gold medal winner, writes to say his colour was marvellous. Mr. Prichard, the Welsh N.P.C. cup winner, writes the same. Mr. W. Dormer, the big Cinnamon winner, writes to say his colour outshone all others. Mr. Binns, big Crystal Palace Yorkshire winner, Mr. Shackleton, etc., etc., all used nothing except Sandiford's Royal Red. See advt.—(ADVT.)

The annual country ramble of the Hull Cage Bird Society, writes Mr. Ernest R. Ridley, the hon. secretary, is fixed for Saturday, May 21st, Barton-on-Humber and district being chosen for this year's outing. Arrangements have been made with our Barton friends to accompany us, and permission has been received from several land-owners in the district to warder over their lands. Tea will be taken at the Red Lion Hotel (the headquarters of the Barton Society). Will all members accompanied by any fanciers or friends who would like to go meet at the Corporation Pier at 1.30 prompt (return fare 1s.)? The committee are most anxious to make this outing a huge success, and hope that all members will make a special effort to go and spend a pleasant half-day in the country.

A lecture upon "Seeds" will be given by Mr. T. R. Trower before the London and Provincial O.S., on Thursday, May 19th, at the "Raglan," Aldersgate Street, E.C., at 8 p.m., when all visitors will be heartily welcomed, writes Mr. J. W. Ramsden, the hon. secretary, pro. tem.

The annual (members') exhibition of the Newburgh and District Gardening Society is to be held on January 23 in the East-shore Park, Newburgh. Nine classes for cage birds will be provided. The show will be open to the public from 12 o'clock to 7 p.m., and a good display is expected in all sections.

Those interested in such species as the Red-faced Mouse Bird and the Red-whiskered Bulbul will find some capital notes about them in the May issue of the "Avicultural Magazine," the former being the subject of the coloured frontispiece by Mr. H. Goodchild, the notes being by the Editor, Mr. Frank Finn, and the latter being written about by that keen aviculturist, Mr. W. E. Teschemaker, B.A. There are other able articles, etc., in the issue.

National Green-marked Y.C.C.

Will societies desiring the club's patronage kindly oblige by making early application, as we are desirous of allotting patronage earlier to facilitate the business of societies. Classification as last year.—F. ARMSTRONG, Hon. Sec., 78, Pear Street, Halifax.

The Norwich Plainhead Club.

I have pleasure in notifying members of the Norwich Plainhead Club, writes Mr. J. Hopkins, the secretary, that CAGE BIRDS will offer two prizes, value £2 2s. each (one for novices and one for champions), to be competed for over the whole of the five shows which are being patronised by the N.P.C. during the coming 1910-11 show season.

Rare Bird for the Zoo.

An interesting addition to the birds on exhibition at the Zoological Gardens in London (says "The Times") is about to be made by Sir William Ingram, whose representative, Mr. Wilfred Frost, has returned from an expedition into the interior of British Guiana with living specimens of the extremely rare bird "Cock of the Rock." The birds, with only stuffed specimens of which the public are familiar, are about the size of pigeons. The plumage is a beautiful bright red, though the tail and tips of the wings are dark brown. The feathers on the head form a pretty arch. Mr. Frost and his party had an adventurous journey. They were almost lost in a bush swamp, and on two occasions disaster almost overtook them by water. At one time their canoe came into collision with a submerged log, and the man at the bow was thrown into the river. At another Mr. Frost, in his endeavour to save the cages containing the birds from toppling over, had a narrow escape from being drowned himself. Before starting on this expedition Mr. Frost took a number of Birds of Paradise from New Guinea to Tobago for Sir William Ingram, who is experimenting with the breeding of these birds in the West Indies. [Mr. Frost is well known to many of our readers, having been an exhibitor at the London shows, and they will be glad to learn of the successful termination to his mission.—EDITOR "C.B."]

A Talking Rook.

A tame rook which has developed powers of speech is the somewhat remarkable pet of a cottage family at Horsham, Sussex (according to the "Daily Mail"). I paid a visit to the cottage to-day, writes the representative of that paper, and learned the bird's curious history. It has always been a bird of surprises. Four years ago an elder brother of the little girl who showed me the family pet picked it up on the road, a mere fledgling. He brought it home, thinking it was a Jackdaw, and it was duly christened Jack.

"We had to teach him to eat," said the child, "and we fed him by putting little pieces of food down his throat on the end of a match."

Under such treatment Jack prospered, and the first surprise came when, assuming the adult plumage, the supposed Jackdaw revealed itself a pure-bred Rook. Some months later the lady of the house was one day astonished to hear the bird say: "Come on, Jim." Jim is one of her sons. Subsequently Jack was heard to say "Good morning" and "Hallo!" Then the bird learned to call a neighbour's dog—"Floss, come here"—to address the cat as "Puss" and his mistress as "Mater."

Jack gave his friends a third surprise in the spring of last year, when "he" laid five eggs. Now his patrons feel compelled to explain to their visitors that Jack is a lady. "Jack eats almost anything," says his little mistress. "He is very fond of meat and greenstuff, potatoes, cake, and grubs. He hops about while father digs the garden and picks out the insects. We have often seen Jack sop pieces of bread in his bath before eating them, and one of the funniest things is that he does not like worms. Jack eats porridge in winter, and if we give him too much food he buries it in his cage and picks it out again when he is hungry."

SHOW DATES FIXED.

To secure insertion in this column, a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.
* Under the rules of the C.B. Union.

OUR ESSAY COMPETITION.

Many thanks for cheque received, being first prize awarded me in the Canary section of the recent Literary Competition. It was a pleasant surprise to me on opening CAGE BIRDS to find I had come out on top in my section, and I should like to congratulate the winners in the other sections. I wish CAGE BIRDS every success.—A. F. FIFIELD (Oxford).

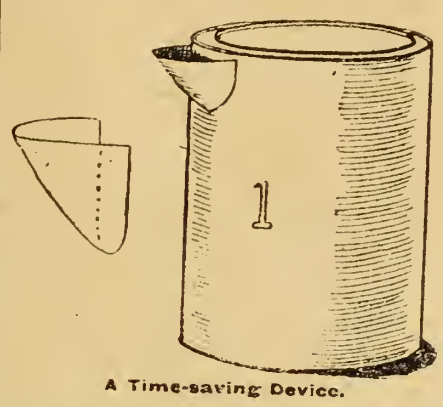
I beg to acknowledge, with many thanks, receipt of your letter enclosing cheque for £1 1s., prize awarded to me in your recent Essay Competition. I should like, in fairness, to point out that I "cribbed" the idea referred to in my essay for hanging cages on to a wall (instead of using a rack) from Mr. J. A. Betchley, the hon. secretary of the Henfield Fanciers' Society, who has a very similar arrangement in his bird room, which he tells me answers admirably. I wish your paper continued success.—H. C. BROOKS (Horsham).

I was agreeably surprised, on opening my paper on Friday, writes Mr. E. Collins (Barnstaple) to discover that I had won chief honours in your recent Essay Competition, especially when I found I had won the "double event," securing both the section prize and the painting. The latter I shall greatly value, as besides my collection of birds, I have a fine collection of paintings by our West Country artists. None, however, will be valued more than that which I have just won. I have kept and exhibited British birds and Hybrids for the past six years. My brother (W. Collins) won your Christmas Front Page Painting Competition in December, so that we are now in the happy position of congratulating each other on our success. The two drawings of my birds enclosed with the essay were executed by him. I thank you and the judges for all the trouble you have taken in awarding the prizes.

I beg to acknowledge receipt of your cheque for £1 1s., the prize awarded to me in the Essay Competition, for which, and your kind wishes and congratulations, I sincerely thank you. I have kept as pets various Britishers and Canaries since a boy, and last year, fired by CAGE BIRDS, I resolved to try to "breed something." I did, namely, three Border Fancies, two hens and a cock, and broke the fourth egg. I have tried again this year, but as yet am not specially inflated by my luck. I am going to use your very acceptable guinea to extend my operations slightly, and to have a shot at the highly improbable (a task needing the confidence and enthusiasm of a novice) by trying to pair my tame cock Chaffinch and a hen Canary. I tried last year, but the only result was that he claimed a tuft or two of her feathers each day. But she was a bird of slothful temperament, and poor spirited; also, I think, no longer young. The Chaffinch, too, was sulky and morose, owing, I think, to taking him from the living room he is wont to fly about in, and where he sees people often, to a quiet room. This time I will keep them where he is happy, and the lady must accommodate herself to the conditions. You may be pleased to hear that the article by Mr. Teschemaker on "The Ideal Cage Bird" (the Robin) led a friend of mine who saw one for sale to get it for me, he being greatly smitten with the article, but no hand himself with birds. I have had him now for two months, and he had been caged a month when I got him. He sings well, is getting very steady, and yesterday had his first tour round the room, taking to it very kindly, and returning to his cage, quite on his own initiative, in about three-quarters of an hour. I need not say that the Chaffinch was not loose at the same time; two such pugnacious creatures, I am afraid, will take some reconciling. Should the Chaffinch-Canary try result in anything more interesting than the plucking of the lady, I shall be glad to let you know.—R. W. VANDERBEN (South Shields).

Order at once, Part II. of "Cage Bird Hybrids," 7d. post free.
The best, most complete, and up-to-date book on Mule and Hybrid breeding.

Illustrated Ideas



Every "Illustrated Idea" used will entitle the sender thereof to two shillings and sixpence.

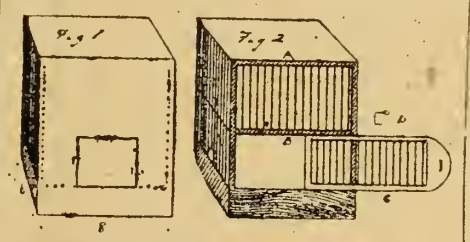
No. 408.

A Time-saving Device.

Sent by Mr. H. Hardy, 5, Denstone Terrace, Swaythling, Hants.

Owing to my work taking me away from home all day, and having six different pairs for breeding Mules and Hybrids which needed six different stock mixtures, I had to devise some handy means of putting the seed so that the feeding of the pairs did not interfere too much with my wife's household duties. I got six golden syrup tins with the spring-in lids,

A Time-saving Device.



and cut out a three-cornered hole near the top rim, as shown in the sketch, then I cut and bent a piece of tin which I soldered on for the spout as shown. With a coat of Brunswick black and a small number enamelled on the be passed through the wires of side of cage, the idea is complete. These tins I fill up once a week, and all my wife has to do is to give them their clean water, and pour out some of the seed into their feeders.—HERBERT HARDY.

No. 409.

A Use for Old Linnet Cages.

Sent by Mr. S. J. Eagles, 115, Abbey Street Buildings, Bermondsey, S.E.

I enclose sketch of how I have converted an old Linnet cage into a nursery cage, which may be useful to your readers, many of whom have these cages lying idle, no doubt. First take an ordinary Linnet cage with solid back, size about 6ins. by 8ins. by 9ins., remove top of cage, and then with a small saw cut through dotted lines as shown in sketch No. 1, cutting

From Linnet to Nursery Cage.

back completely out with the exception of a narrow strip each side about ¼in. wide and 2ins. at bottom. Then cut two strips of wood about ¼in. thick, and nail A and B as shown in sketch No. 2. Then with a small fretwork drill, pierce holes about ¼in. gauge through A and B, and then place wires from A to B, leaving bottom space open for birds to feed through when the cage is hung on breeding cage. A slide can be made as in sketch at C, by making a wooden frame with wires through, or perforated zinc, according to one's liking; and by drilling a hole through the side, a small piece of wire passed through the hole and bent like D will hold the slide in position, the slide to front to correspond to the number of the cage, The top, of course, is replaced.—S. J. EAGLES.

CLUB & SOCIETY NOTICES

One notice of any forthcoming Society meeting inserted free. It should reach us not later than Tuesday morning's post. Specially printed Club Notice Postcards may be had free on application to our Manager. Secretaries should always use them.

Altrincham C.B.S.—May 17, Victoria Restaurant, 8. Revision of Rules, etc.—B. Head.
Burton-on-Trent C.B.S.—May 17, New Inn, Station Street, 8. Challenge bowl rules.—Elliott and Wood.
Bradford East O.S.—May 17. Ramble on Whit-Tuesday to Harden and Bingley; train leaves Bradford Exchange, G.N.R., 1.22 p.m.; Manchester Road, 1.26; Horton Park, 1.28; for Wilsden. All friends heartily invited.—H. Hill.
Bradford West C.B.A.—May 14, Red Lion Hotel, 7.45. Classification of open show and application for patronages.—F. Western.
Bolton Woods C.B.S.—May 14, Victoria Hotel, 8.—M. Skirrow.
Birkenhead C.F.A.—May 17, Ablett's Cafe Room, Market Street, 8. Egg-food competition and show business; will all members try and attend? Fanciers invited.—A. E. Lloyd.
Chesterfield C.B.S.—May 21, Queen's Head, Gluman Gate, 7.30. To consider rules drawn up by committee. Intending members cordially invited.—C. H. Seynor.

A MAGAZINE WITH A FUTURE.

"The Baby's World."

A magazine which should have a great future has come into being with the month of May. It promises to be absolutely indispensable to every home brightened by baby laughter and the merry prattle of children. We refer to "The Baby's World," the May (and first) number of which is now on sale at all newsagents and booksellers at the popular sixpence.

A more brightly-designed and interesting magazine of its kind could not well be imagined, while the authoritative character of its contents, and their practical usefulness, are attested by the standing of the editor, J. Johnson-Macgregor, M.D., F.R.C.S. The mother is instructed how and when to educate and help her children, how best to feed baby, how to arrange and how to keep a healthy nursery, how best to dress the children, etc., etc. Many other interesting items are thoroughly dealt with in the first number of "The Baby's World," including everything it is essential the mother should know to ensure her own health and well-being.

From cover to cover appear numerous high-class illustrations that will appeal to the hearts of every woman and mother, and the full page frontispiece to the journal is superb. Competitions are also open to every reader of "The Baby's World."

This magazine starts out on its career with the good wishes of a host of notable professional and society people, who have written congratulating the editor upon its scope and aims. "The Baby's World" is designed to appeal to every English-speaking person of whatever rank or station, and we can cordially recommend our readers to obtain a copy—they will be delighted. It will prove itself to be a reliable guide and sympathetic friend in all difficulties and troubles which beset the home.

The publishers are Messrs. Ewart Seymour and Co., Ltd., 12, Burleigh Street, Strand, London, W.C.

Questions and Answers.

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following Conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaints written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence, otherwise their letters will not receive attention. All the fees received from this source will be handed over in full to the "Referee's" Poor Children's Dinner Fund (London).*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Canaries.—**Claude St. John.** British Birds, Mules and Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c., Park and Lake Avienlture—**Frank Finn,** B.A., F.Z.S. M.B.O.U., &c. Wild Bird Life—**H. Norman.**

NOTE.—If an answer is required concerniug the proper mating, etc. of Norwich, Yorkshires, Crests, Cinnamons, Greens, Borders, Lizards, Scotch or any other variety of the Canary family, we shall, should the querist desire us to do so, be pleased to submit his question for answer to some leadiug specialist of the day on the variety concerned.

CANARY QUERIES.

Answered by CLAUDE ST. JOHN.

Flying Feathers and No Song.

A New Reader.—You must he so, or you would have seen this trouble dealt with a number of times lately. It is simply cause and effect. The bird will not sin gas long as it is moulting continually in this way. The cause of the moulting will be found in a draughty or damp position, or one where there are constaut extremes of heat and cold. These conditions must be entirely altered before you can hope to make the least improvement in the condition of the bird. See reply to "George Spearey" on this point, and treat your bird in the same way as regards the position where it is kept. Feed on a mixture of two parts canary to one part summer rape as a staple. Every second day give separately half a teaspoonful of hemp, and on the alternate days give a similar quantity of crushed sponge cake with four drops of sherry and two of cod liver oil emulsion well mixed in it and sprinkled with gold of pleasure seed. Give a spray of chickweed daily. In the drinking water give as much Epsom salts as will cover a sixpence and six drops of lemon juice for two days; and after this dissolve a pennyworth of citrate of iron and quinine—obtainable from any chemist—in a tablespoonful of sherry, and give twenty drops of this in the water every second day until the moulting ceases. Allow the bird to bathe as freely as it likes in mild weather.

Wheezing Canary.

George Spearey.—If you had gone into a little more details about your management, feeding, and where you keep the bird, I should have been in a much better position to help you. As it is, I can only surmise what the conditions are and give you a little general advice. First of all, see that bird is not kept near a fire in a warm kitchen, nor in or near a window, nor in any position where it will be exposed to cold draughts or violent fluctuations of heat and cold. Avoid a position near or over burning lights in the evenings. Keep the bird in a box cage in a cosy but not overheated place, where the temperature is as equable as possible, and the air is always pure and fresh without being draughty. See that the cage is not infested with red mites, and keep it nicely strewn with clean gritty sand. Feed on a mixture of three parts canary to one part summer rape as a staple. Twice each week give separately half a teaspoonful of a mixture of equal parts hemp, black rape, inga, and teazle. Every second day for a fortnight, when not giving the mixed seeds, give a piece of bread the size of a hazel nut scalded in milk, drained, and sprinkled with moist sugar. Give a spray of green food daily. In the drinking water give six drops of syrup of rhubarb and a pinch of Epsom salts for two days, and after that give twenty drops of whisky, six of syrup of squills, and two of encalyptus oil well shaken together two days in every three for a week, and every second day for another week afterwards. Carry out these instructions implicitly and report progress in a month.

The Trials of a Breeder.

C. Smith.—The weather was doubtless responsible for your first trouble, and in the second nest I rather suspect you disturbed the hen too much, so that she did not really start feeding at all. I am also undecided from your letter whether you supplied the soft food for rearing the young to the birds separately, or expected them to rear the young on the mixed seeds. Your feeding, again, I do not care for as a regular diet. Let the birds go to nest again in the usual way. When the hen commences to sit; take the cock away from her and keep him out of sight, and also, if convenient, out of hearing of her, leaving her to hatch and rear the young by herself. Give a staple of three parts canary to one part summer rape whilst sitting, with a small pinch of the mixed seed, and half a teaspoonful of egg food once each per week. On the thirteenth day give half a teaspoonful of egg food, or you may substitute the food you have been using, making it crumbly moist with a drop or two of water, and continue giving this quantity morning and afternoon each day afterwards, gradually increasing it from day to day as the young get older and require more food. Add a spray of freshly-gathered green food two or three times a day after the third day from hatching. When the young are ten days old you may begin to give a little cracked hemp seed. Interfere with them as little as possible, and leave the hen and the nest severely alone when about hatching, and you should do better next time.

Hen Out of Condition.

Hard Luck.—The bird must be in a very low condition, unless you have made some mistako about the growth of the tail feathers. Under normal conditions, the feathers should have been full grown at least a fortnight ago, even assuming they were lost immediately before the bird came into your possession. Keep her caged separately in a box cage in a nice bright position, but not near the window, and in a comfortable temperature as equahle as possible. Do not overheat, nor yet keep her on the cold side. Try to strike the happy medium. See she is quite free from draughts, and not exposed to the fumes of burning lights in the evenings. Feed on plain canary only as a staple. Every second day give separately half a teaspoonful of summer rape, and on the alternato days a piece of bread and milk the size of a hazel nut, with two drops of cod liver oil emulsion dropped on it and dusted over with soft sugar. Give two leaves of dandelion or spray of chickweed daily. Limit the diet to this for two or three weeks. Keep cage strewn with clean gritty sand. In the drinking water give six drops of syrup of rhubarb and a pinch of Epsom salts every second day for a week, and in the second week give by same means a crystal of sulphato of soda, the size of a split pea, a crystal of sulphate of iron half as big, and six drops of dilute sulphuric acid every second day. Stop all other drugs, and treat solely as above for time named, and if bird is not then quite well report progress, mentioning this reply.

Canary Querists should send to our publisher for "Canary Breeding for Beginners," 7d.; "House's Canary Manual," 1/2; and "Yorkshire Canaries," 1/-, post free.

Feeding Rollers whilst Breeding.

Homer.—It's rather a tall order, but here it is—in a nutshell. During uesting, staple two parts, canary to one part summer rape. Every second day teaspoonful of egg food per pair, with pinch of gold of pleasure and sesame mixed in equal parts, if birds are backwards. On the alternate days similar quantity of a mixture of equal parts hemp and inga. Green food daily—daudelion for preference if birds are backward. During sitting: The same staple seed diet, plus a small teaspoonful of egg food if the pair are left together, or half the quantity to the hen if by herself, once a week. The merest scrap of green food—not daudelion—may be given once a week, but is not necessary. When feeding young: On the thirteenth day after incubation has commenced give a small teaspoonful of egg food, and every day afterwards give a fresh supply two or three times, regulating the quantity given so that the birds just clear up before next supply is due. The first few days the above quantity will be rather more than is needed. After the third day begin to give a spray of freshly-gathered green food two or three times a day. From ten to twelve days old you may add a supply of cracked hemp, and also a little soaked rape if hen shows any signs of flagging in feeding. The usnal staple supply of seeds must be left on cage the whole of the time. Hard boiled egg should be fresh at least every day, if possible; to save waste, an egg may be cut cleanly in two, the cut surface turned down flat on clean plate, and the whole buried with fine oatmeal, to exclude air. If kept in a cold, dry place it will then do for use next day. Of course, you could hope to rear young on the foods you name; it is quite possible to do so. It is not necessary to moisten hard-boiled egg. This should never be done. There is enough moisture in the egg itself.

Brevities.

Correction. Changing Food.—In the reply to "Only a Novice" on this subject last week, the word "egg" in the tenth line should read "bread crumbs." The error, which was probably a slip of the pen, was, I trust, sufficiently obvious to be understood correctly by any reader.

Green Food Whilst Sitting (A. B. C.).—You may give a small piece of green food, preferably chickweed, watercress, or groundsel, now and again, say, about three times a week, when the weather is nice and mild. Do not give more than will be cleared up in a few minutes, especially if the cock is not present to help it to disappear, and withhold it altogether in cold, damp, and chilly weather.

Boil on Back (Nellie).—If it is situated right at the bottom of the back immediately over the base of the tail, it is probably nothing but the oil gland in a perfectly nominal condition, and you did wrong to prick it. If it now appears sore, anoint it slightly with a little pure vaseline once or twice at intervals of the day, but do not interfere further, unless, indeed, it should develop to something clearly abnormal, when you should write again and describe it minutely.

Misplaced Energy (Novice).—I suspect the hen which sat for twelve days and then tore her nest to pieces wanted to go to nest again. Perhaps you were feeding too high after she commenced sitting, but you say nothing on this point; or it may be due to the cock being left with her, and he, too, being in too high condition. Next time, remove the cock right out of sight of her when she commences to sit, and feed as you will see advised in detail to another querist this week, leaving her to hatch and bring up the young by herself.

Outdoor Aviary (L. Y.).—(1) No harm would result from allowing the Roller in question having a third nest. (2) With constant attention to cleanliness, changing the covering of the floor, etc., the aviary will accommodate 120 birds the size of a Canary. The glass frames on top are likely to cause overheating in the summer if the sun shines on them any considerable time. Instead of removing them altogether I would advise you to have them made loose and fixed on hinges, with a racket on the opposite end, so that you could raise or lower the whole frame at will to suit prevailing circumstances. You would, of course, have to place wire netting underneath, to prevent the escape of birds when frames were raised.

Which, and Why? (Norwich).—I scarcely see the utility of your question as to which brood of young is best to keep for future breeding, and why. If you are breeding common birds or songsters, the best grown, healthiest, and strongest birds, which meet your ideal as to colour and general type, are best to keep—whether they come from the first, second, third, or fourth round of nests does not matter a jot. If breeding pure-breds, those which meet the above requirements, and come nearest the standard of perfection for the variety should be kept, again irrespective of the brood they come in. By the way, you should not have fourth rounds, except in quite exceptional cases.

Cure for Plucking (E. F. S., Bradford).—Am sorry I cannot give you a "cut and dried and guaranteed genuine" cure for this vice. See reply to "J. E. Seager" for a kind of remedy or preventive, which I have been told by those who have tried it will correct the vice. You did right to remove them to a separate cage, as they were old enough to get along without the hen brooding them, but you might first have tried the effect of putting in another nest-pan and supply of nesting material. This will sometimes stop the plucking by diverting the hen's attention. Next time you should drop dandelion as green food, and give instead chickweed, groundsel, lettuce, or watercress.

Hen Plucking Young (F. E. S.).—I have some recollection of answering this question recently. Better look through replies for the last week or two. You seem to have done quite correctly, and should leave the young in the show cage, seeing that the latter is in such a position on the front of the breeder that the parents may readily feed the young through the wires, but cannot easily reach them to pluck them. Supply a saucer of egg food, fresh daily, and also a saucer of cracked seed in the show cage for the young to peck at, and as soon as you find these being consumed in fair quantity for the number of birds in the cage, you may remove them from the breeder, and after another week or so in the same show cage transfer them to a flight cage.

Why, Indeed? (Canaries).—I cannot tell why your birds cannot or will not find their mates and breed in the aviary in question. This simple "why" involves so large a question that I might write columns of speculation, and not hit the real point, as you do not give a scrap of information as to your management, or the birds, or their environment. For one thing, it is early enough yet for birds in aviaries to begin. Are you sure of the sexes of your birds? How are the sexes proportioned? And are they healthy and active, and the cocks in song? And is the conservatory heated or otherwise? If you will repeat your query, and give some information on these points, I shall be pleased to help you.

Roller Run Down (Noah).—I am inclined to think the bird may be about dropping into moult. Bathe his feet for a minute or two in a rather warm solution of boracic acid—say, a small teaspoonful of acid dissolved in half a teacupful of hot water. Dry gently, and anoint with a little zinc ointment. Continue your present feeding, but give a piece of bread and milk the size of a hazel nut, sprinkled with soft sugar every second day for a week. In the drinking water give as much Epsom salts as will cover a sixpence, and ten drops of lemon juice daily for three days, and after that six drops of tincture of gentian and four of aromatic sulphuric acid every second day for a week.

A Deserter (Deserted Nest).—Your feeding seems to have been correct, and as the cock was not with the hen I can only suggest that perhaps he was in the same room, where he could hear, if not actually see, her, and that he may have unduly excited her by singing and calling to her. It is just possible the weather may be the cause, but the above is the most likely circumstance. In any case, you can do nothing in such a case but transfer the eggs carefully at night to a more careful foster-parent. Next time you might try leaving the cock with her whilst sitting, but endeavour also to have another hen or two going to nest at same time. The constipation you refer to is more apparent than real. It is a normal condition of sitting hens. If it has not quite disappeared by now since leaving the eggs, give her a rather liberal supply of chickweed for a day or two.

Ailing Yorkshire (Yorkshire Joe).—You might with advantage read remarks to "George Spearey," and see if you cannot improve the bird's position as regards heat and draughts. Put him on a diet of plain canary seed only, allowing a teaspoonful per day of this for a fortnight. Twice during the first week reduce the quantity by one-half, and make up the original amount with summer rape, and in the second week drop the canary altogether on two different days, and give half a teaspoonful of rape and a small piece of bread and milk sprinkled with soft sugar. Give a supply of green food daily. In the drinking water give six drops of syrup of rhubarb and as much Epsom salts as will cover a sixpence every second day for the first week, and in the following week give six drops of tincture of gentian and four of aromatic sulphuric acid every second day. If not quite well at the end of that time write again, and refer to this reply. Do not attempt to breed with him until he is quite well.

Leg Weakness (B. N.).—It is impossible to say with certainty what is wrong with the bird without seeing it, but I suspect it is either a slight attack of paralysis or connected with some internal injury or disorder. Keep it by itself in a moderate-sized cage, and in a quiet place, so as to induce it to take as much absolute rest as possible for a week or two. Place its perch low down, in such a position that it can reach it with the least amount of difficulty. Feed on plain canary seed only as a staple, and every second day give half a teaspoonful of crushed sponge cake with four drops of chemical food and two of cod liver oil emulsion well mixed in it, and a spray of chickweed on the alternate days. In the drinking water give thirty drops of fluid magnesia every second day for a week, and on the alternate days ten drops of tincture of gentian in each half-ounce of which you have got the chemist to mix fifteen drops of tincture of nux vomica. Continue the latter on alternate days for a fortnight, and then report result.

Protracted Moult and Not Singing (G. C.).—It will not resume singing until the moulting is stopped. First see it is quite free from draughts and frequent extremes of heat and cold, and do not allow its cage to hang above or near burning lights. Treat as follows for a month: As a staple give a mixture of three parts canary to one part summer rape; every second day half a teaspoonful of crushed sponge cake with four drops of sherry and two of cod liver oil emulsion well mixed in it. After the first fortnight stop this, and give instead a piece of bread and milk about the size of a hazel nut, sprinkled with soft sugar; on the alternate days a few grains of hemp. Give a little chickweed or dandelion daily. In the drinking water give a pinch of Epsom salts for two days, and afterwards six drops of tincture of gentian and four of tincture of steel every second day until the feather cease dropping. On the alternate days for a fortnight give twenty drops of whisky, six of oxymel of squills, and two of encalyptus oil, well shaken together.

Plucking Young and Fertility (J. E. Seager).—You omit to say how old the young were when the hen began to pluck them, or whether the cock was with her or not. If the young were getting nicely fledged, so that they could do without the constant brooding of the hen, you should have placed the nest in a nursery cage and hung in on the front of the breeding cage, in such a position that the parents could easily get at the gaping beaks of the young to feed them through the wires. If too young to do this, when the plucking is serious, the best way out of the difficulty is to distribute the young among more careful parents to be reared, or you might try fastening a tiny scrap of raw, lean beef or mutton to the end of a perch for the hen to peck. I have heard of this curing the habit, but have not had an opportunity to try it—thank goodness. As regards the fertility of the eggs, it is quite possible that both the eggs laid after the cock was removed may be fertile, and I should certainly expect one of them to be so.

Young Dead in Shell (W. H. Marshall).—It is quite probable the recent spells of bad weather were responsible for your losses. But as the same thing has occurred on two consecutive occasions it would be advisable for you to look into the questions of shocks, such as may be occasioned by violent slammings of doors, or similar sudden vibratory noises. It is also possible the young were too weak to chip the shell, but you give no idea how far they seemed to be developed. Anyway, to be on the safe side next time, on the evening of the twelfth day after commencing to sit immerse the eggs just for a moment one at a time in a cup of warm water. Repeat the process on the following morning, and again in the evening, and on this occasion, if you steady the eggs in the water, and then, when quite still, watch them, you will be able to judge by their "bobbing" whether they contain living young or not. If they do, you may attempt any further interference in the way of assisting them to hatch you like, not earlier than the fourteenth day. Personally, I prefer to leave them alone after moistening them as above.

An Outdoor Aviary (D.A.W.S.).—You do not give any idea of the position or aspect, nor whether it is partly open to the elements. Still, I have no doubt you could breed Canaries in it successfully if you take the first essential precaution of starting with birds which have already been accustomed to normal treatment as regards temperature. But you would probably fail if you start with birds which have been accustomed to artificial conditions and never kept below a certain comfortable degree of heat. You could have birds bred indoors, of course, provided they have been kept regularly in a room where no form of artificial heat is used, and in this case, if your aviary is open to the air, you should not put the birds in it until about the middle of this month, and choose a spell of fine weather for doing so. Given these conditions, the birds would succeed without any heat during the winter. The place must be quite free from damp, and draughts, and should be well ventilated, by means which you can control to suit prevailing circumstances. A concrete floor would be best to keep out vermin. Otherwise, have a wooden one, and cover to a depth of one inch with clean gritty sand.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S. M.B.N.H.S., etc.

Foreigners for Cage.

A. B. C.—I am taking it you do not wish to attempt breeding but merely a few brightly clad, attractive pets. You could not do better than procure pairs of Zebra Waxbills, Red Avadavats, Green Avadavats, St. Helena Waxbills, and Zebra Finches; the latter will probably breed if you put up several cocoanut shell nests and supply a little nesting material. Diet: Canary and white millet seeds; spray millet, a small piece of ripe fruit to pick over, and greenfood, while available, flowering or seeding grass is par excellence for these minute ornamental Finches, and can be given ad. lib. In the summer time a spray from either rose or fruit tree, or any non-poisonous bush or shrub, that is covered with greenfly, will be greatly appreciated, and tend to the birds' welfare. Water for drinking and bathing should be regularly supplied, the bath should be outside the cage, hung over the open door. A piece of clean cuttlefish hanging in the cage is also a valuable adjunct in helping to keep them fit.

Grey Parrot Plucking Itself.

Mrs. E. C.—First sprinkle the birds on the bare places with warm water, so as to properly cleanse these areas, then, after allowing them to become partially dry, paint with Spratt's "Pannakura." Give this bird a liberal supply of such ripe fruit as it will take, also a few nuts. Give several doses of Dinneford's magnesia—one teaspoonful of magnesia to 3 of water—let this form the only drinking fluid for the day, at any rate till the whole is consumed; give this every other day so long as the voidings are not watery-loose; when this occurs allow a few days to lapse, and then supply again with three days' interval between the doses. The bleeding will somewhat weaken the bird, so put the chemical food in the water when not giving the magnesia. You can use a camel-hair brush to paint the bird with; it should be well cleansed for each occasion. Do not give tea, coffee, or milk sops, table scraps, nor yet any kind of animal food. I do not think there is any need to destroy the bird. Report progress in about ten days' time.

Foreign Bird Querists will find in our handbook, "Foreign Birds for Beginners," 1/1, and "Budgerigars and Cockatiels," 6d. post free; a mine of information of use and interest.

Food for Firefinches.

F. W. B.—The circumstances you name are very interesting, but it will not be the first time Firefinches have bred in a cage. Supply the usual seed mixture, greenfood ad. lib., such as flowering grass (seeding grass), chickweed, lettuce, etc.; also a little of any kind of ripe fruit they will take, and some good soft food mixture, to which should be added a good portion of crumbled sponge cake. A few ants' eggs (cocoons) should also be given, but they should first be moistened by steaming. If you can obtain greenly (blight) from any non-poisonous tree or plant, this will be greatly appreciated, and certainly help towards the successful rearing of any young that may be hatched; any kind of plant lice may be given; they can either be brushed off with a camel-hair brush or a spray of the infested foliage or herbage put in the cage, leaving the birds to help themselves. If you notice any of the other birds intruding, or attempting to

do so, into the nest box, they must at all risks be removed; but if there is no interference it will be best to leave them altogether as they are. I should keep up a supply of spray millet while the young are being reared. This species are not commonly bred, so that it will be worth while taking a little trouble to endeavour a successful result. It will be easy to omit from the above dietary anything the birds show a distaste for; in fact, at such times pandering to their tastes is good policy. Observe your birds closely, and act on your observations; it is such tactics that spell success.

Brevities.

About Sprossers (V. A. G.).—The price is variable. I have seen them offered as low as 15/-, and also as much as 35/- asked for them. The autumn would be the best time, but I should keep a watch on the advert. columns, especially of those dealers which make a speciality of Continental birds, and purchase as opportunity offers.

Toucan with Growth on Shin (W. Lunnon).—It is difficult how to advise in such a case. A local vet. or experienced fancier would be the best to advise you after seeing the bird. However, if neither of these is available, keep the part well by bathing with hot (not sufficiently hot to cause the bird inconvenience) water, and paint with tincture of iodine. The probability is that the growth will be shed or fall away in due course. If it is permanent, it will certainly penalise the bird to some extent whenever it catches the judge's eye. Report progress a fortnight hence.

Treatment of Grey (E. Smith).—(1) It is always customary to refill the bird's seed tin daily, and oftener if it should require it; it is customary to keep a continuous supply of seed for parrots and other birds; in addition they should have ripe fruit, a few nuts, and a piece of plain biscuit can also be given. I do not think you need fear overfeeding if you attend to the warning against slops and sops appearing almost weekly in this column. (2) I think it will be better if you content yourself with whistling to it. (3) The first moult is usually quite a protracted affair, and as soon as the weather is genial I should spray the bird with quassia solution in case there should be any parasites.

Spice Birds (Timid).—The differences in plumage are infinitesimal; the hen is not quite so light as the male, she is also slightly slimmer, and her beak is narrower at the base and more pointed than that of the male—the distinction is most apparent when viewed in profile. The great difficulty in sexing birds which are practically alike in plumage is that you get quite young birds mixed up with those fully adult, which is a very misleading factor, and comparing the shape of the beak you will find the most reliable means to adopt. The eye soon acquires skill in noting these subtle distinctions in shape, and the expression, "I sex my birds by their features," is not altogether a fairy tale. In an ordinary double-breeding cage I should only attempt breeding with a single pair in each cage.

Bird to Cross with Canary (Foreign Finch).—I think the green singing Finch or a Yellow-rumped Seed-eater would meet your case as well as any, as both species are brightly clad in olive green and bright yellow, value 5/- to 7/6. The Aurora Finch is also a pleasing Finch of Mannikin-like appearance, with a good song, and it has been crossed with the Canary on several occasions; value 10/- to 12/6. The grey singing Finch is a sprightly little bird, clad in sober grey, but very chastely marked; a sweet singer, and crosses with the Canary fairly readily, and the resulting hybrid is a sweet singer. Almost any of the genus Serinus would cross with the Canary; all are good songsters, and but few of them deserve the designation "plain," while many are really handsome and beautifully arrayed in olive and yellow.

Will it Talk? ("Megalla").—The Roseate Cockatoo does not enjoy a great reputation as a talker in this country, though in its native land it ranks high in this respect. I have met with several and heard of others which were quite accomplished linguists, so there is certainly hope for your bird. The first thing is to properly tame it, be very steady when feeding, cleaning, etc., and though it should be kept in your midst where it can hear plenty of conversation, and be talked to and fondled with from time to time, yet hasty movements or anything calculated to scare the bird should be avoided in its vicinity. As soon as it is tame, talk to it both casually, and also constantly, repeating the same word or sentence. With patience, steadiness, and kindness, the bird should certainly talk to some extent.

What Species of Weaver? (E. A. M.).—It is the Half-masked Weaver, a handsome Senegambian species; it will, I think, be yet brighter on the upper parts and the yellows of the under-surface will also be much intensified. I have found this species fairly amiable in a mixed community, though in the breeding season it exhibits a strong antipathy to birds of similar colouration to itself. They are very fond of lettuce and seeding (flowering) grass, and this can be supplied ad. lib., a couple of mealworms per bird per diem should be regularly supplied, and in addition, during the summer months, almost any insect the garden or hedgerow supplies. Canary, white millet, and spray millet in addition will about fill the simple "bill of fare."

Budgerigar with Swelling (Yoker).—Isolate this bird and keep it in a warmish room for a few days, the temperature should be even; it will have to be gradually "hardened off" again before putting out of doors. These are not heavy drinkers, therefore it will be best to give a dose or two of Dinneford's magnesia—one part each magnesia and water—so as to give relief. If the swelling is hard, you might try painting it with tincture of iodide. It is only when she is in full breeding condition that the cere of the female is brown; at other times her cere is blue, but not usually of so deep a hue as that of the male. By the way, his cere is also of a deeper hue when in full breeding condition. I should continue to treat it with hot water previous to the painting, but the skin should be dried before this takes place. The bird has probably caught a bad chill in travelling.

Young Budgerigars not Feathering (Budge).—This trouble frequently arises from in-breeding, and the remedy is the introduction of new blood. Again, the same result is brought about by permitting the adult birds to exhaust themselves by almost continuous breeding; in such case a separation of the sexes for a few months would restore their vigour. As regards the young birds you speak about, leave them alone, and I opine that in the course of a couple of months, or at the first moult, they will don a complete garment. To obviate a repetition of the occurrence I would advise the changing of the male bird of the pair which have the partially feathered brood, that is if the same thing occurs again. Very probably the weather has had much to do with your trouble, and that with the advent of a higher temperature and more sun the trouble will disappear.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. Weston.

Hand-Rearing and Feeding Jays.

Kedger.—The procedure for hand-rearing Jays is the same as for Magpies; see reply to P. Cunningham this week. When adult, a very simple and economical method of feeding is to utilise table scraps largely. As a stock food, you could use broken-up dog biscuits, or puppy cakes, or "Melox" (or other dog meal). Soak with hot water, giving it crumbly moist, and mixing with it table scraps, cooked meat, potatoes, greens, gravy, etc. Give a few trapped mice, young and old Sparrows, and the like (if you can capture them), but not over much raw meat. You will find them accommodating in the matter of food. Eggs (raw and cooked), nuts (cracked), of various kinds, also berries, fruit, worms. Beetles are other things they will eat. Jays I always find very partial to ripe fruit, and it is excellent for them.

Best Muling Couple for Novice.

Novice (A.T.).—I have an idea that I answered this query a week or so ago. All things considered, I should say a healthy, steady, house-moulted cock Linnet is about the best bird a novice can select to commence Mule-breeding with. Generally they are inoffensive as regards meddling with eggs and nest, and make good husbands. I have an old bird now which will both sit on the eggs and help feed the young. It sometimes happens, however, that one will pull the nest about (especially when the hen is building and sitting), and occasionally they will either break or throw out the eggs. Even these birds, however, will often make good fathers

British Bird Queriists should purchase our "British Bird Manual," published in two parts, "Hardbills" and "Softbills," price 1/- each, or in cloth cover together, 2/3 post free.

once the young hatch out. You must, as with all other Finches, get to know your birds' dispositions, and act accordingly. It is often dangerous, it should be noted, to try and run a Linnet with two hens in one season, for generally they do not appreciate a second wife providing the first one is to their liking. Some Goldfinches are models of good behaviour in the breeding cage; and so are odd Greenfinches. With such birds, of course, the beginner's part would be equally easy. Still, I plump for the Linnet as the novices "very own bird."

Moulting Chaffinch and Redpoll.

A. S.—I seem to be very frequently giving the method of treating Chaffinches. As a staple seed mixture give the following: Canary and teazle four parts each, summer rape, charlock and linseed one part each. In addition give a good feed of white sunflower seed or safflower seed (or these two mixed) daily; or put one part amongst the stock mixture. Smashed walnuts (and other nuts) are greatly relished also and should be given occasionally in the light of a special treat. A small feed of hemp can be given once or twice a week. Give a mealworm or two every day, varying same with flies, smooth caterpillars, small grubs, earwigs, spiders, aphides, wasp grubs, etc., as obtainable. Chaffinches will eat most kinds of live food. These birds nibble with appreciation a sprig of shepherd's purse, chickweed, groundsel, dandelion, etc. Radish, turnip, and summer rape seedlings, are usually eagerly devoured when just sprouting, which they soon begin to do when soaked in cold water. A big cage, plenty of clean water for bathing purposes, and a free supply of the wild seeding weeds are the great essentials (not forgetting live-food) for birds moulting into "show form" (i.e., carrying a good "bloom"). Treat the Redpoll on the same lines, though he will not be so fond of sunflower and safflower seeds (unless cracked), nor will he need them freely. If you believe in colour-feeding, you can rub a little sweet pepper (made rather oily) amongst the seeds; or the Chaffinch will eat it amongst a little soft food (insectile mixture).

Skylark with Insects.

Caledonia.—The Skylark is very apt to get infested with insects, unfortunately, and will not thrive until they have been got rid of, especially when "over-run" as you put it. These birds should always have a dust-bath containing a good dash of insect powder (or, better still, Izal disinfectant powder), and be sprayed at least once weekly. The bird may have been affected when you bought it; or you may have put it into an affected cage. The insects are the grey bird louse. Their presence in such numbers causes feather trouble, and they will soon cause worse troubles if not exterminated. The bird should be dusted thoroughly with Keating's insect powder (or the Izal disinfectant powder), especially under the wings, at root of tail and round the neck, then wrapped in a piece of flannel for about 15 minutes; then put into a temporary cage. The powder must be worked well amongst the plumage; a small camel hair "mop" brush is handy. Keep it out of the eyes of the bird if at all possible. The old cage should be painted all over with turpentine (or paraffin), letting it run into every crack and crevice, whether in front or otherwise; when dry, distemper it out. Perches, seed and water vessels, must also be washed and cleansed. To complete the cure the bird wants skilfully hand-washing with carbolic soap. Don't you know some experienced fancier who would do it for you? Half measures are no good if one wishes to exterminate lice. See that the tail feathers are thoroughly washed, for it is on them that these lice seem particularly fond (or so my investigations lead me to think) of depositing their eggs.

Hand-Rearing Finches.

E. E.—You will not find it "easy" to hand-feed Chaffinches, Goldfinches, and Linnets, that is, if you are tackling them all at once, for it will take up a lot of your time. To take the young birds at a day old would only add to your troubles; you would gain nothing by doing so, even if you succeeded in rearing them, which is doubtful. I don't believe in taking any young Finches from their parents at too early an age; let them show their feathers nicely before you remove them. I would sooner have to "cram" them at first. Up to the twelfth day (from the 10th to 12th) is safe enough. The food to be used is the usual kind—that is, egg and biscuit. Crush two Osborne biscuits, and well mix with them a hard-boiled egg, using a fork to do this with, one with thin prongs. Mince the egg up finely and the whole can be passed through a potato "squeezer," (or masher). When feeding take the required quantity of this mixture, and make it the consistency of thin paste (or of cream) with new milk. See that it is always sweet and free from the slightest taint of sourness. The egg-food must be made fresh at least once daily. Often I put in a good pinch of Plasmon powder, which I am never without in my bird-room. A few small cut-up pieces of mealworm may be dipped in milk and popped into their mouths pretty frequently; likewise any house flies you can capture should also be fed to them. As the youngsters grow, add a little soaked and just sprouting summer rape to the stock food. Steep the rape seed in cold water, which thoroughly change every day. It will soon begin to germinate (burst), and is then ready for use, dabbing it as dry as possible in a cloth before mixing it in the food. Note other replies given this week.

Hand-Rearing Magpies.

P. Cunningham.—My own hand-fed Magpies have commenced to imitate sounds and the human voice at a very early age. Once they have moulted they quickly pick up things. I have now a last year bird (pink-eyed, too), which is very smart and quick, and acquiring quite a lengthy vocabulary. I think both sexes talk equally well. You should have no trouble in hand-rearing a Magpie. If you mix finely-minced hard-boiled egg with an equal quantity of very stale bread crumb, and moisten it with new milk when feeding, you should get along all right. If you get several young ones, however, you will find it cheaper to use scalded and mashed up puppy biscuits (of best quality), with which you can mix the egg in the proportion of three parts biscuit to one of egg. You can give the youngsters mealworms, by all means, and smallish garden worms, cut into suitable pieces, should also certainly be supplied. Also you can frequently chop up a piece of lean mutton or beef (mince it up finely) and give amongst the food; or a little tender cooked meat can be given. Personally, however, I fight shy of meat as much as possible (especially so for very young birds), for I am certain it upsets the stomach of most birds (sets up diarrhœa), especially when much is used raw. I prefer boiled or stewed rabbit flesh to all other, when obtainable. Mix a good big pinch of fine grit amongst the food now and again, or about half a teaspoonful of powdered cuttlefish bone. You can give the birds a drink of plain water after each meal, if you like. If any nestling should get a touch of diarrhœa (which is unlikely if you give the cuttlefish or grit), well mix a saltspoonful of prepared chalk powder (from any good chemist) amongst a portion of the food fed to it. Repeat after an interval, if it seems necessary. Keep the bird very clean.

Hand-Feeding Again.

County Palatine.—You ought to hand-rear the Linnets alright. But I tell you candidly that it is not worth the trouble. Of all birds, hand-reared or Canary-reared, Linuets are the most unsatisfactory; they are generally as wild as Hawks, strange though this statement may seem. It is not difficult, providing one's patience stands the test. No one can expect to be successful with every bird he tries to hand-rear, but a large proportion should certainly survive. Finches should have a little soaked (just sprouting) summer rape seed mixed among their soft food from the day they are taken (nine or ten days old). It gets "mashed" by the fork in the process of mixing. It can be increased from day to day until a good proportion is present. I have known many Finches reared on this and soaked bread alone. Of course, being more or less moist, the more soaked rape one uses the less the food wants moistening with milk (or water). As the birds get older it should not be given so "sloppy" as at first. Don't forget to mix in every two days or so a small quantity (say, a tiny saltspoonful) of crushed cuttlefish, or very small particles of grit. I always think the young birds seem to feel the cold, during very inclement weather, especially when they commence to roost outside the nest, and at this period they should be kept very cosy (especially at night), their cage covered with a warm cloth, and stood in a warmed room when possible. It is a very good plan to at first lightly colour the drinking water with Parrish's Chemical Food, a fine tonic and strengthening medicine for birds. When they commence to pick about for themselves, offer (in addition to soft food and soaked rape) maw seed, lightly cracked Canary and hemp seeds, groats, or coarse oatmeal, shelled and broken up sunflower seed; also seeding heads of chickweed, shepherd's purse, and groundsel, and thistles in season. Don't, at the same time, forget grit and cuttlefish, likewise old, crushed mortar.

Brevities.

Hand-rearing Linnets (R. N. S. T.).—Follow the advice given "E.E." this week; it applies to all the smaller Finches. I cannot *recommend* a cheaper diet. Several replies this week may interest you.

Green Linnets and Shepherd's Purse (Novice, W.M.).—A Greenfinch and a Green Linnet are one and the same bird; the former is the correct name. You will find an illustration and full description of shepherd's purse (and all other useful wild weeds) given in the book entitled "Seeds, Foods, and Wild Plants for Cage Birds," which is published by Cage Birds (post free 1/2). Shepherd's purse has been several times illustrated in "C.B." already.

Hand-rearing Rooks and Crows (F. D. S.).—Good heavens! What a dose of questions this week about hand-rearing birds. It looks as though there will soon be some busy people in the world. Rooks and Crows can be hand-reared in the same way as advised P. Cunningham this week for Magpies. They ought to agree in the garden with Jackdaws; adult "Jacks," however, might possibly attack them when very young, if given the chance. Let them have access to good-sized grit, by all means.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 2, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 21s. Subjects for post mortem examination must be sent packed in a box direct to Mr. Yates, with the fee, this and any accompanying letter being kept from contact with the dead bird. Any bodies sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

A. A. Llewellyn.—Hen Canary died from hæmoptysis, or pulmonary hæmorrhage, arising from the rupture of small blood vessels supplying the lung tissues. This discharge of blood is in itself not a disease, but only an accompaniment of other disease or weakness of the parts in which hæmorrhage occurs. From your history I see this hæmorrhage has occurred before, with loss of voice. Death you see in this case is accidental, and you have nothing to fear with your remaining birds.

F. J. Dick.—Siberian cock Goldfinch succumbed to pneumonia, involving both lungs. He had been ailing some days, as you remark, and in almost all such cases death occurs suddenly, even though a bird may have appeared only slightly indisposed. The respiratory mechanism of birds is highly complex, and extremely delicate, which, when affected, invariably ends fatally, this occurring often suddenly without any premonition. The history you give me fully accords with post-mortem symptoms. The recent cold, windy weather, together with moist air recently experienced, are evidently the primary factors in the cause of the disease.

A. B. McClenaghan.—Cock Bullfinch died of capillary bronchitis, commencing in the first instance in bronchitis, and gradually extending so as to involve the smaller bronchial tubes and lung tissue. I have every reason for believing that with appropriate early treatment a cure might have been effected. Bronchitis itself is not necessarily a fatal disease, but when it is allowed to extend to the capillary bronchioles death invariably occurs. A little carbonate of ammonia (six grains) given in the drinking water night and morning would have been the correct treatment.

Parrakeet.—Cause of death was pneumonia arising from climatic influences, together with recent transit. The illness was of recent date, death occurring from this cause very rapidly; this is a feature of pneumonia as affecting birds. It was a hen bird. The sex of these birds is very easy to differentiate; in the female the cere or soft part at the base of the beak is of a light brown colour, and bright blue in the male; besides this, I have determined to which sex it belongs by its anatomical features. These distinguishing external characteristics are well marked in adults. In the young it is not always an easy matter to distinguish the sex by external appearances to the amateur. General appearances indicate to me that she was adult, possibly a 1908 bird. Your next question is an enigma, and one that I am not quite prepared to answer. You can better answer this yourself when you consider the price you gave for her. Thousands of these birds are bred on the Continent, and are imported and sold here very cheaply; whilst aviary-bred birds here fetch several more shillings per pair. If it is an imported bird I should say that its importation is not of recent date.

Mrs. Maconechy.—Advanced liver disease caused its death. This organ had undergone fatty degenerative changes, due to an alteration or conversion of its normal cell tissue into fatty particles. Such alterations upset its normal physiological actions, bile formation, its glycogenic function all being arrested. When the disease becomes so far advanced death must ensue, as it is an all-important organ, which, when put out of working order, necessitates the arrest of the remaining working mechanism. This state is generally induced by the too frequent application of some drugs given for any length of time. It is sometimes induced by a diet too rich in fats and oils. The hen contained a large quantity of internal fat, and was altogether in a too gross condition. The gall bladder was almost devoid of contents, and the proventriculus, or true stomach, was in a slight inflammatory state. Its onset would be insidious; you would hardly notice much alteration in her health until latterly.

GENERAL.

Answered by the Editor.

A Suggestion (A. F. F.).—Many thanks for the suggestion, which we will certainly adopt, so kindly send us the promised photograph.

An Illustration (W. H. Steele).—Thanks for sending the cutting. Illustrations, however, are copyright, so we could not reproduce the picture of the Parrot in our pages.

A Seed Crushing Machine (G. Smith).—We are sorry, but it seems to us that the description you give is hardly explicit enough to enable readers to make a similar machine.

Water Bottle for Aviary (C. Nickson).—Yes, we have illustrated this water bottle previously. Thanks for your very kindly-worded letter.

Wake Up Fanciers (H. Jenkins).—While we are in entire agreement with some of the sentiments expressed in your letter, on the whole we think it of too "political" and personal a character to be inserted. Ours, remember, is a journal devoted to the cage bird hobby.

Binding "Cage-bird Hybrids" and "Our Canaries" (F. Broadhurst).—Yes; it is our intention to supply binding-cases for these works when complete; also to bind the parts for any readers who may desire us to do so. The charges will be very moderate.

Seeds, Foods & Wild Plants
FOR
Cage Birds
By Various Leading Authorities.
Price **1/2** post free.
A comprehensive and complete manual giving information on the various seeds suitable for all varieties of cage birds, their food-values, uses, etc. Descriptions and illustrations of the various wild plants that are indispensable to the successful keeping of British and other birds are fully given. Postal Orders only to
"CAGE BIRDS," 154, Fleet St., London, E.C.

Foreign Birds
FOR
Beginners.
By W. T. PAGE, F.Z.S., etc. Foreign Bird Expert to "Cage Birds."
Price 1/1 post free.
A highly instructive Manual, written from personal observations made during a lifetime's experience. Contains a magnificent coloured plate and a number of black and white illustrations. Indispensable to all keepers of Foreign Birds. A book replete with useful hints and reminders, especially instructive and useful for beginners.
Send Postal Order to—
CAGE BIRDS, 154, Fleet Street, London, E.C.

LIVE BIRD LABELS
For use When Sending your Birds by rail or to the Shows.
24, 3d.; 50, 6d.; POST FREE.
"Cage Birds" 154 Fleet Street, London, E.C.

Correspondence.

A Nest that Served a Double Purpose.

SIR,—As a constant reader of CAGE BIRDS for many years, I thought it might interest some of the other readers to know that a Thrush has built its nest in my garden hedge. On having the hedge clipped the Thrush forsook the nest. Now a Blackbird has come and lined the nest and laid her eggs, and is going on all right.

JOE SHAW.

A Federation in Staffordshire.

Sir,—I am pleased to inform you that a meeting was held on April 30th, at the Albion Hotel, Hanley, and the Hanley, Longton, Leek, and Tunstall Cage Bird Societies were federated for the annual shows. There is every prospect of some good shows being held this next season, as the bird Fancy is growing rapidly round this district, Tunstall alone having six new members.

S. BROUGH, Sec. Tunstall C.B.S.

Prize Money at Camborne Show

SIR,—I should like to know if any fanciers who exhibited at the late Camborne Show (Cornwall), November 4th, 1909, have not received their prize money? I won a first in Class 9, fourth in Class 10, and a special, which I have not received up to the present. I have a post-card dated December 16th last saying all prize money will be posted the following week. Could the judge, or any fancier, let me know if my birds won the prizes, or were the cards put up by mistake? I cannot afford to lose the amount. I am a well-known fancier, having been showing for the last ten years, and this is the first time I have had any reason to make a complaint.

H. WILLS (Wills and Sons).

Goldfinches at Menai Bridge.

SIR,—Mr. Griffiths speaks of the society and exhibitors "suffering" by reason of the unfortunate blunder which occurred in connection with this show. Why he should have intervened I know not. My explanation of the matter was accepted by the exhibitor who suffered, and in the report which I wrote for CAGE BIRDS I gave this gentleman's bird credit as being the one which I intended for second prize. Further, I sent the value of the 2nd prize to Mr. Roberts, the hon. secretary, so that neither the society nor the owner of the bird No. 11 should suffer through the error which was made in marking my judging book. Had the mistake not been made, Mr. Griffiths' bird would not have received any higher position than it did, therefore it is a matter of no moment to him. No one has suffered; but on the contrary someone has benefited, as two fanciers receive 2nd prize money.

C. A. HOUSE.

The Proposed Open Show for Glasgow.

SIR,—I was glad to see "Delegate's" letter regarding the proposed open show for Glasgow. He touches on some points, and more now appears than what is on the surface. I am in favour of a New Year show in Glasgow, but let the Fancy go about it in a straightforward way. Let us have none of this hole-and-corner work. We have had too much of it in the past. Select your judges from across the border, and let everyone have an honest run for his money. For years back we have had too much of the "scratch-my-back-and-I'll-scratch-yours" policy, which is ever known to the veriest tyro. Cease your wire-pulling; bury your differences; and go straight, and success will attend your efforts.

BORDER FANCIER.

SIR,—A meeting of the whole of the fanciers of Glasgow and District will be held on Tuesday next, May 17th, in the Co-operative Hall, Glasgow Cross, at 8 p.m., when the proposals made by the delegates at their meeting will be put before those present for their final decision. Should this meeting decide on the formation of an Association, the following business will be proceeded with: Election of office bearers; rules, classification, etc. I take this opportunity for making a final appeal to the fanciers of Glasgow for their attendance at this meeting, and it is for them to decide whether the second city of the Empire can support two open shows.

F. BOWMAN, Sec. pro tem.

SIR,—It has come to my knowledge that a certain section of Glasgow fanciers intend to be present at the meeting in connection with the above, for the purpose of voting a well-known Glasgow bird dealer to the position of show secretary. I hope to see all fanciers who have the interest of the new association at heart present at that meeting, if only to defeat the unsportsmanlike action of these so-called fanciers, especially after the time, trouble and expense the present secretary pro tem. must have been put to. Mr. Bowman, as secretary to the late Glasgow and West of Scotland Open Show, has the experience necessary for the position, and I trust fanciers will show their appreciation of this when the meeting comes round. To avoid any personal ill-feeling, allow me to sign myself

ONE IN THE KNOW.

Proposed Show and Society for Pentre and District.

SIR,—The first meeting respecting the above society was held on May 7th. Will all fanciers who are interested in cage birds kindly attend a meeting to be held in the Queen's Hotel on Saturday, May 14th, at 7.30 o'clock? We earnestly invite fanciers from Blaenshondda, Treherbert, Treorchy; also from Mardy and Ferndale. It is hoped all fanciers will make a special effort to attend, so that they may choose a special night to hold meetings.

INTERESTED FANCIER.

Should the First Eggs be Taken Away from Hens?

SIR,—I should be glad if some of your readers will give their opinions as to whether it is best to take away the first three eggs from hen Canaries? I find my hens do not settle down to sit till after the third egg is laid, but are on and off the nest all day, sometimes sitting on the first and second egg all night, and again not sitting fast the following day. Will some of your readers say if the hen sitting one night, and allowing the egg to become cold next morning, would be likely to spoil it? Also, will they say the best time to return the cock to the hen, if she has been sitting alone?

H. BASHFORD.

Wake Up! Millom and District.

SIR,—I think it is about time the fanciers in the district were waking up, as at the meetings of the Millom and District C.B.A. there are only two or three members to do business, including secretary and treasurer. I think the association deserves better support than this, seeing that they give a cup and medal to be competed for at their show, and have a hall and room for show and meetings lent gratis. Our subscription is only 2s. 6d. yearly, and we are open to receive any person that is a fancier. There will be a general meeting on May 30th, when all intending members are asked to be present, or to kindly forward name and subscription, which will be gratefully accepted. Now, Millom, wake up!

W. J. THOMAS, Sec.
83, Lonsdale Road, Millom.

The Hand-rearing of Hawfinches.

SIR,—Last year I tried unsuccessfully to hand-rear a nest of young Hawfinches. The birds seemed to do very well for a time, but I was unable to get them to pick up for themselves, and just at the time when they should have been "doing for themselves" they all died, one after the other. I also know of two other fanciers who had similar experiences. I should be extremely grateful if some fellow reader who has been successful in rearing young Finches would kindly give us the benefit of his experience by stating what he considers the best method of treating these youngsters; also name the most suitable food for the purpose, as I intend to have another try this season.

SALOPIAN.

"Medicines for Cage Birds."

SIR,—I have had much valuable information from the series of articles written by Mr. Yates, but in the last article there are one or two slight errors, which I am sure that gentleman will pardon my pointing out, viz., sodium and calcium hypophosphate should be hypophosphite: also in the prescription he gives, the acid in the syrup of squills neutralises the ammonia in the salvolatile; if the stimulating effect of the ammonia is required, it is advisable to use tincture of squills, which contain no acid.

T. C. CRAWHALL.

We submitted the above letter to Mr. Yates, who replies:—

SIR,—I thank Mr. Crawhall for pointing out the mistake (evidently a printer's error) consisting in the substitution of one letter for another, viz., that sodium and calcium hypophosphate should read hypophosphite. The slight chemical reaction occurring between the acetic acid contained in the syrup of squills, and the ammonia in the aromatic spirits of ammonia is scarcely worthy of mention, and does not affect its practical utility. I have dispensed and prescribed it for some years with good results. To a student in chemistry, or a chemist himself whose duty it is to dispense medicines, such a combination would no doubt appear alarming, but to a clinician who not only dispenses but notes the action of these medicines, their beneficial effects are determined. My articles were intended not as a manual or text book on chemistry, but as a short guide of practical utility to fanciers.

GEO. YATES, M.R.C.V.S.

A Red Mite Preventive.

SIR,—Trouble comes in many bird rooms during the breeding season in the form of the little red mite. I may say that where cages are stacked one on top of another, or placed in racks, a useful preventive is made by cutting out a piece of leather the size and shape of a shilling piece—about 3-16ths of an inch in thickness—and placing same at each end of the cage, thus allowing a free passage of air through.

A. ACKROYD.

Wake Up, Fanciers!

SIR,—I should like to say a few words in reply to Mr. A. R. Coe's letter. Perhaps it would be of interest to him to know that I am a Nonconformist—and am not a "sanctimonious humbug," as Mr. Coe politely terms it; also, that I am only one of hundreds who are breeders and fanciers. I also think that the many Nonconformist ministers who often write interesting articles in CAGE BIRDS, are greatly offended at Mr. Coe's insulting remarks.

W. V. GOLDWIN.

[Our correspondent takes the remarks of Mr. Coe too literally; but we hereby give warning to all whom it may concern, that any future references to politics and religion will be "blue-pencilled" with the utmost severity.—EDITOR.]

SIR,—I have a good deal of travelling up and down the country, and see in a good many ways how our bird laws work. Might I endorse what your correspondent Mr. C. Elkerton says? I think bird-keepers owe our Editor a debt of gratitude for opening his columns to help ward off an attack on the British Bird Fancy. A correspondent, Mr. A. R. Coe, accuses CAGE BIRDS of political bias in one of his letters, when he is the first to bring in politics. Might I suggest to him that there is such a thing as "Criticism without Cant." In my opinion, and that of several fancier friends, he owes an apology to "C.B." for his absurd suggestions.

S. SHEW.

SIR,—I am more than surprised to find week after week the senseless, one-sided arguments of Mr. A. R. Coe, inserted in your valuable paper. After reading the letters by Miss Constance Fitzmaurice, Mr. Walter Connell, and others, I thought A. R. C. would have considered himself (to use a vulgar expression) "choked off." But, oh, dear no! He still continues his incoherent, rambling statements. Instead of keeping to the question at point, viz., the Preston and Flowers case, he charges others with trying to introduce a political controversy in the colnmns of CAGE BIRDS, he himself being alone guilty. In your issue dated April 23rd, A. R. C. continues his twaddle, which I do not think I am far wrong in stating is not of an interesting or elevating nature to us birdy men. I think Mr. Coe should seek other fields for his "political" fight, and I think I am voicing the opinion of most fanciers in saying that "C.B." has no space for idle twaddle on "class war," etc., such as A. R. C. has been giving us lately. I think I could sum up that gentleman in a few words; but "nuff said."

REGINALD HASSELL.

The Yorkshire County British Bird and Mule Club.

SIR,—I was pleased to see the letter in last week's correspondence from one of the original members of the above club, Mr. T. H. Inman. Without doubt, this gentleman has done well for the club, and has worked hard, but at the same time I cannot quite agree with all he writes. In the first place, the club was not formed solely for Bradford or the Yorkshire Union Shows. Certainly I fully expected to see some Bradford Shows take the birds up. They did, and with some success, but having got the wedge in, the Britishers made the mistake of putting up the number of classes before they had got a hold upon the societies and fanciers, with the result that they were then dropped. Had the classification been left the same, Halifax would not have been the nearest show to our friend's address. Then he says, "Seeing we know British and Mules are strong outside Bradford, we ought to interest ourselves a little more at home." This, to me, is all the more reason why we should try and get these outsiders in with us. We in Bradford, barring one or two, are absolutely raw and unversed in the difficult art of keeping and exhibiting British, etc., and require these outsiders to join us, interest us, and instruct us in this great art, not to drive or keep them away, so that we can have all the "plums" ourselves. Another little cut of our friend is this: "I don't think we ought to go to the Zoo either." Surely our Mr. Inman does not think he can answer for all on this point? Some few weeks ago I mentioned that if the Y.C.B.B. and M.C. could get up a little trip to the Halifax Zoo it would interest, and perhaps instruct, some of its members and friends, besides getting a goodly number of fanciers together, and maybe add to the membership of the society. Several have informed me they would like to go, in company of fanciers. The British and Mule section is one that requires to be governed on broader lines than any other branch of the Fancy, so varied and different are its requirements, and any attempt to narrow its limits will cause destruction.

STRAIGHT 'UN.

A Recipe for a Washable Distemper.

SIR,—When I sent you the recipe for a washable distemper I hoped it would be of use to fellow amateur decorators. I have made and used it myself and found it most successful for outdoor work and the inside of cages. I did not know there were two forms of size. On enquiry I find that ½lb. packet of "Groco" size powder equals 3lbs. of jelly size and would do just as well. This distemper costs about 1s. for 12lbs. of materials—considerably cheaper than those mentioned by Mr. John England—and is quite harmless to birds. Can Mr. England guarantee the same for those he mentions?

(Miss) M. LATHAM.

SIR,—As I noticed in CAGE BIRDS a recipe for making a washable distemper, I might say that no distemper will exactly stand the test of washing; and as regards the oil and turpentine, I have never heard of such a thing in my life, although it can be made to set very hard and fast. I hope Miss M. L. will not be offended at me for writing so, but oil will not mix—it floats on top. Now, this is a branch of my trade, and should there be any reader who does not know, I will give him a recipe to make his own at a very trifling cost—one which will look equal to any he can buy and will be as durable. And he can also make any colour he requires, and a disinfectant at the same time—just suitable for bird-rooms and bird cages.

W. WRIGHT.

The Cage Bird Fancy in Belfast.

SIR,—I was much interested in reading Mr. J. Barclay's communication under the above heading in your issue of May 7th, and with most of his statements I am in perfect accord. However, I do not agree with him that the subscription paid in Belfast for membership of the clubs is too high. In fact, in my opinion, it is too low, and would be raised, only we want to keep the membership open to any working-man fancier who likes to join. Mr. Barclay truly states the subscription is fixed at 10s. per annum, with 2s. entrance fee. The latter clause is liable to misinterpretation, as it may be thought that it applies to birds being shown, but it is only applicable to each new member joining. Now, judged by the regular rate of subscription paid in England, this may seem a high rate, but let us examine the privileges attached before coming to a conclusion. In the month of November each year the club holds a young bird show, which must consist exclusively of birds reared during the previous season by the members. The show generally consists of the following classes:—Crest and Crestbred, 4; Norwich Plainheads, 12; Yorkshire, 8; Mules, 2; British birds, 2—a grand total of twenty-eight classes. In each class a member is entitled to show two birds, for which no extra charge is made. Surely no one can say that that is not good value for 10s. After the show the club is wound up financially, and all the money in the treasurer's hands is paid out as prize money to the successful exhibitors, which reaches down to fourth prize birds, in order to ensure an equitable distribution of the funds. Now, I have given fanciers some idea of how our club is worked, and I will leave it to them to say how it could be carried on for a smaller subscription than 10s. per annum. I have now dealt with the principal portion of Mr. Barclay's letter, and a few words will answer the remainder. He speaks of lectures. But will any fancier who reads CAGE BIRDS say they have not got plenty of lectures. The Canary is not too prolific a text, and it has been so exhaustively treated these past few years that I think it almost impossible to find anything new to say on the subject. As regards strangers residing in Belfast for years before knowing there were Canary clubs in it—that statement requires to be taken *cum grano salis*. Considering there are two club shows and one large open show held annually, all well advertised locally, how anyone could be in Belfast for years without hearing of such passes my comprehension. In reference to the other matters in your correspondent's letter I am in entire sympathy with him, but I would suggest that he joins one of the clubs, where he will get favourable consideration for all his proposals and every opportunity for putting his theories into practice—nest feather shows, matched pairs, washing exhibitions, judging competitions, etc.

JAMES E. ADAMS
(President Belfast Norwich, Crest, and Yorkshire Canary Club).

To Sellers and Buyers of Canaries.

SIR,—Seeing Mr. W. H. Morris' note in your valuable paper, re Sellers and Buyers, I am also one who has been sent hens for cocks, and they were stamped with the sender's name on the wing. Being away from home all day, I put a pair I sent to Norwich along with a pair I had given to me, that I knew had bred (being a novice, I trusted him to send me a pair of Norwich, a Buff cock and Yellow hen). The result is, they are both hens; one has laid five eggs and the other four, and the one I had given to me has laid four. One has got two young, the others three each, and they are sitting again now, one with four and the other five eggs. I hope this will meet the eye of the seller of hens for cocks, as I paid him his price. I shall deposit with the Editor in future when I require more birds, as I am going in for show birds, having a room 12ft. square. So I think I have plenty of room. I have fitted a nine compartment cage at one end and am going to fit the other end with a flight cage. I wish your very valuable paper, CAGE BIRDS, every success. I am having the plates for the last 12 months framed for my bird-room.

JOHN PYATT.

[Our correspondent apparently overlooks the fact that even the most experienced of fanciers cannot always accurately tell the sex of *young* Canaries (i.e., birds that have never been bred with); hence that he himself should receive a hen for a cock was most likely a pure inadvertence, and seeing that both the birds were stamped on the wing, we are of opinion that the seller would have put the matter right had our correspondent notified him of the mistake.—EDITOR.]

Novices at Yorkshire Union Shows.

SIR,—Kindly allow me a few words in reply to "Straight 'Un" as regards my remarks on the Skelmanthorpe scandal. To begin with, I am exceedingly sorry at having expressed my opinion; better if I had thought it only. However, I will give Mr. "Straight 'Un" the benefit, and admit that I am in oblivion as to management of shows and the routine, although I have been personally acquainted with a few judges, and visited shows invariably for 22 years; that will do for this part of the subject. Now, just before Christmas I was at a social in Bradford, timed to be there at 6.30, but I did not arrive till 8.30. In the passage I observed a large case, very large. Then I heard a few birds chattering. Of course, I was not settled till I was introduced to the owner of this case, and introduced in the usual manner. "I presume you have Canaries in this case?" "Yes, I have just been to a show with six." "My word! you have had some trade on; have you had success?" "No, not with one single bird; and, strange to say, three of them two weeks ago had both first and second. Can't understand it, just my luck; would not have cared if one had counted. What do you think about it, Mr. J.?" "Well, I am not in a position to explain the poor luck," I said, "but let us re-fill our glasses with peppermint, and join the merry throng; better luck next time, no doubt." Next, re novices being able to win medals right and left, that would not be right; nor would it be right to line their pockets with gold. Mr. "Straight 'Un" is correct there, decidedly. This rule will have to be enforced, and a most difficult rule to be observed it will prove. I should like to see this clause a little overcome, all the same, if it is possible. Would "Novice's" suggestion be of any use? If so, I would like to deal with the word. NOVICE: At all times it is not a very pleasing word. Would it not be better to have A Section, B Section, and C Section? It may sound more business and show-like. But perhaps, again, I shall be putting my foot in it; so in conclusion I will apologise for my simple-mindedness, and hope I have no wrong with anyone. If I have, I will do all in my power to try to put things right, and for all breeders (either in A, B or C Section) my wish is that they will have a good and prosperous season.

JOHN H. JOWETT.

Mainly Sentimental.

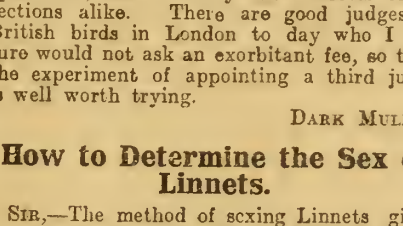
SIR,—In reply to the letter of Mr. John Hocking, I wish to state that I never sneer at religion. I have never yet treated a minister of the gospel with disrespect. He mentions the name of the Rev. C. D. Farrar. Now, this gentleman has no greater admirer than myself, and I remember once writing to the Editor of CAGE BIRDS saying how I enjoyed the interesting articles written by him, and I know others who love to read the articles written by this broad-minded minister of the gospel. And I always find the articles written by that well-known gentleman the Rev. Bernard Wilton, very interesting too. As regards parsons' wives, I mentioned that if they were not fanciers they should not be let inside the bird-room. Of these I could say hard things, but I will refrain. In answer to Mr. Hocking's query, "And what woman is not a fancier?" I say their number is legion, and I am sure that many of the opposite sex will agree with me when I say that a great number of women seem so ignorant as regards the beauties of Nature, such as birds, insects, and flowers, that one can hardly understand how it is. But to meet with a woman who is a bird fancier or a student of Nature, is to meet one of the most interesting persons imaginable, and she is often more enthusiastic than mere man. I stood amidst orange and lemon trees, on which hung rich-coloured fruit, and above towered some gigantic ferns. I did not stand alone; I was in company of a lady. She was a bird fancier, and a parson's wife had told her I was fond of birds. This was our meeting place, and we could meet here and talk about birds alone. She was so nice, I liked her; I more than liked her. Her father is now a Knight. He caught me with his daughter in her bird-room. I was helping her with her birds, of course. Tender affections have sweet remembrance. It was early spring, and I had been walking in company with a maiden. We were ever alert to catch the sight of any bird, or anything of interest. We enjoyed ourselves during this bright spring day. We stood looking at a tree where the Woodpecker had been very busy. While looking at the chips on the ground I saw flowers of that tiny messenger of spring the primrose. These I picked and gave to my fair companion. We wandered over fields, and at last came to a bed of clover, near a rookery where the rooks were very busy. She said that if anyone found a four-leaved clover they could have whatever they wished. I searched, but searched in vain. I have tried to breed hybrids, but in vain. She searched and found a four-leaved clover; she was pleased, and so was I.

WILLIAM P. BELL.

[Tender recollections of the fair sex are all very well to sigh over when one is alone and feels in the mood to entertain such disturbing fancies, but we must ask correspondents to kindly remember that ours is a sternly practical journal.—EDITOR.]

The Battersea and District Open C.B.A. Show.

SIR,—Allow me an answer to our friend, "Visitor" (although I would much rather address him in his proper name). I am sure he is endeavouring to point out something to our advantage, and we welcome it, and are pleased to think that there is at least one who is interested in our welfare. We can assure him that it is the wish of the Battersea Society to cater for all, visitors and exhibitors alike, and at the same time to save ourselves from being crushed out of existence. We admit there was a delay in judging, also that there were nearly 800 exhibits, but there is no guarantee that that number will not be reached this year because there are only two judges already appointed (for more information on this point see club reports column). Nobody yet knows where the specialist clubs' patronage will go. Catalogues were late, I am sorry to say. But whether judging be early or late, it is the difficulty experienced at many shows to be able to get a prompt and correct delivery of catalogues. We shall, however, as we go on, gain experience which will benefit all concerned; this is the hope of Battersea, which has to its credit two show innovations (which need not here be mentioned), and a third which is in view for our next show. "Visitor" says, "if there are any fanciers of the same opinion as himself, would they express their views?" I take it he would not think them unkind if they were not of the same opinion. I thank him very much for his thoughtfulness, and I shall for one do my best to make our show more comfortable for all our visitors; and I invite "Visitor' to assist us by becoming a member.



W. J. HONEYSETT.
Chairman Battersea Open C.B.A.

SIR,—With reference to "Visitor's" letter in CAGE BIRDS issue of May 7, re Show Judges, your correspondent's views, and those of myself, are akin. One would think that with only three short of eight hundred entries the Battersea C.B.A. could well afford three judges. Taking last year's catalogue as correct, we find Mr. Pattrick judging the Yorkshire and Mr. Robson all other varieties. This means that the former gentleman had 290 exhibits, and the latter 507. In my opinion there was plenty of work for a third judge, and when we find 205 entries in eleven classes of British and two classes of Hybrids, or an average of over 15 per class, one does not wonder that the British bird exhibitors ask for a special judge. Had a third judge been appointed last year, the classes could have been nicely divided as follows: Yorkshire, Mr. Pattrick, 290 entries; British, Hybrids and Foreign, Mr. "Another," 213 entries; all other varieties, Mr. Robson, 294 entries. I cannot help thinking that some officials look upon a judge more as a machine than a man, and that you have only to lubricate him to keep him going for as many hours as an eight-day clock. Now, sir, is it fair to the exhibitor, birds, or judge to find the latter at 7.30 p.m. trying with the aid of electric light to determine, which of two champion Goldfinches, or which of two champion Linnets, is the better in colour. I maintain that no artificial light can compare with daylight for judging purposes; therefore a judge should not be given more work than he can get through during the hours of daylight. In conclusion, I would advise the Battersea C.B.A. to be sportsmen, and to study the interests of all sections alike. There are good judges of British birds in London to day who I feel sure would not ask an exorbitant fee, so that the experiment of appointing a third judge is well worth trying.

DARK MULE.

How to Determine the Sex of Linnets.

SIR,—The method of sexing Linnets given by several correspondents I have found to be quite unreliable. Many undoubted cocks have very poor "whites" in their wings, and many hens have good wings. The distinguishing mark I always look for is the marking of

This sketch (drawn by Mr. G. E. Weston) depicts on the left hand a feather from the breast of a cock Linnet, showing the reddish "mooning" near the tip, and on the right hand one from a hen, showing the disposition of blackish colour down (round) the quill, these being distinguishing sexual markings. The shading at the top represents the dark "underflue."

the breast feathers (which Mr. G. E. Weston also advises in his answers to queries). On the cocks these feathers have a distinct thumb-nail mark, or, if you like, "mooning" of reddish colour. In the hen the shaft of the breast feather has a dark line, which runs through to the tip. This line is entirely absent from the cock's feathers. I forward a few specimen feathers taken from wild moulted birds, which you may be able to illustrate.

J. F. SMITH.

The Type of the Lancashire Canary.

SIR,—I notice in your valuable paper a lettor signed E. Thompson. I have carefully gone over it, and I call it "town jealousy of the Lizard," which is quite another thing altogether to the Lancashire. I see Mr. Thompson says it has come to be his turn to be amongst the slain." I fail to follow you here at all, Mr. T., as I have yet to see you amongst the warriors or those gentlemen whom you said you belonged to, the L. and L.F.A. I also see he asks why not try to get the confidence of the exhibitors? I may tell him I have got it by such good fanciers congratulating me on my appointment as specialist judge, as Messrs. John and Walter Dewsnap, John Smith, W. Lawton, and that old but true fancier John Wrigley; also the whole of the members of the L. and L.F.A., with the exception of you. Now, Mr. T., be a man, and try to be a fancier, and be true to yourself, as I know full well who wrote the letter signed "Lizard." I should have been very pleased to have seen you at our social at Hyde, which is only seven miles away, and not too far I hope for you to travel. Then you would have had the pleasure (I hope) of seeing the minutes passed unanimously as the L. and L.F.A. like the man and not the letter-writer. I will enlighten you here a little: I lost my noviceship 20 years ago at Manchester, by winning the special for most points in the show. I was breeding and exhibiting Lizards before you were born. Anyone who "knows the ropes" of showing has had my reason for not showing Lancashires—even your prompter. I do believe you when you say that if you have not a more successful career than me you will clear out of it. But I am not made that way. I have had my room cleared by fever; but what is that to a fancier? No, Mr. T., no clearing out for Teddy. It is my life study, and small things do not upset me. Now, Mr. T., in conclusion, you as a novice and youngster in the Fancy, don't quite see clear how you are being led by the nose by Mr. F. I have seen it for some time; when I won at the Palace, when I beat him at Glossop, where the local paper is his salvation, and now to elect me as judge, has done it! You kn he is a bad loser, but a good winner. J weigh things up a little, and you will between the lines, and come amongst truo fanciers and be a man. This is my l letter on this present correspondence to y or your friend, as you seem to be unkno out of Glossop.

E. FULLER.

SIR,—I am surprised at the attitude tak up by people calling themselves fanciers. think it would be much better if they wou leave personalities out of the question al gether, as I think there is plenty of sco in the Lancashire Canary; we can discuss t true type of the Lancashire without bei personal. If my memory serves me right, was our old and esteemed friend Mr. Ful who introduced this correspondence, and p sonally I think Mr. Fuller was right criticising judges who have put to the fro birds in Lancashire classes, showing "cre properties." The Lancashire Canary Ass ciation have a rule that all birds showi "crest properties" shall be disqualified, a yet at the last Rochdale Town Hall Sho a bird figured in the money which u doubtedly showed "crest properties," and th same bird stood first at Manchester. I w much surprised when I saw the bird at bo shows figuring in the honours list, at t same time both judges being specialist jndg of the L.C.A. and L. and L.F.A. I was su prised when I saw it at Rochdale becau Mr. House has repeatedly put down bir showing the least signs of "crest" blood their veins. The Lancashire Canary is bird wihch has been much improved sin the formation of the L.C.A., and every sho season seems to bring an improvement the type of the bird. It is very rare th we see those short thick-bodied birds, wi round heads, standing across the perch wi feather like a bunch of rags. These are n typical Lancashire birds. We want a La cashire standing well up on the perch wi good long legs and a broad, long, and fl head, with plenty of feather on it, goo thick neck, nice round back, with good wi carriage. The longer the bird the bette Its tail should slightly droop when taking side view of the bird. A good Lancashi should have plenty of feather, but it shou lie closely to the body, and not bulge ou like a newly-burst cotton pad.

J. OLDHAM.
Middleton Junction.

In Praise of the Bullfinch.

SIR,—The Bullfinch is a very beautiful litt bird; in fact, one of the prettiest of our En lish Finches. The food of Bullie consis chiefly of seeds, kernels, and buds. Th female is duller and paler in all her tint than the male. In its natural state, this bir feeds on seeds during the summer and autumn but in spring and winter it supports itse chiefly on buds of trees, especially those of th pear, peach, and plum, and is often the caus of extensive mischief. The eggs of the Bulfinc are generally five in number, are a bluish white in colour, spotted with pale orange brown. The young are hatched at the en of May or June, and there are often tw broods in the year. When reared from a nest it is very tame indeed, and can be taught to d tricks, and, therefore, makes a charming littl pet. Although the natnral note of a Bullfinc is only a soft twittering, it may be taugh to whistle musical airs with extraordinar precision and sweetness of tone, and a grea many are annually trained in Germany fo the purpose of sale, many being imported int our country. Some can whistle three distinc airs without confusing them, these fetchin a big price, but few can execute more tha a single air or a short prelude. I know Bullfinch belonging to a friend that coul whistle one verse of "Wait till the clouds rol by" and "Auld Lang Syne." But he was beautiful creature. Bullie should be kept i a roomy cage, which must be clean; the wate pots should be washed out daily, and, wit plenty of good seed he will live in perfec health, plumage, and song, to be admired b all who see him, especially his own mistress Bullie not only breeds with his own specie in captivity, but sometimes will cross with hen Canary, these hybrids being extremel rare; but they were obtained by Dr. Jassy, o Frankfort. A hen Bullfinch will more ofte cross with a cock Canary, as it also will wit a Redpoll, these hybrids being very beaut ful.

The Future of the Cage Bird Union.

What is it to be? Some Opinions from Our Readers.

SIR,—I stated in my last letter (which you held over) that I did not intend to write anything further respecting Rule 22, but I feel compelled to again refer to it after reading a communication in your last issue signed "One Who Knows." This writer states, "as it stands, the rule at first looks unfair, and those who talk glibly and foolishly of 'coercion' and 'freedom' may fancy they have a case, but I can prove they have not." How easy it must be for anyone to write under cover of a nom-de-plume, and say that anyone else whose opinions do not coincide with theirs talks glibly and foolishly. Does "One Who Knows" never wonder how it is that those fanciers who oppose Rule 22 never say that those who favour it write "glibly" and "foolishly"? Shall I tell him? It is simply because we recognise that every man has a perfect right to his own opinion, and we do not think it right that because the opinions of those who favour the rule do not coincide with ours, we should turn round and say that they talk "glibly" and "foolishly." Then why should "One Who Knows" do so, especially when he has not the courage to sign his name, which makes his statement more contemptible still? I could say with perfect truth that in the opinion of many fanciers most of the suggestions of "One Who Knows" are utterly impossible, yet I certainly would not do so, simply because, as I said before, every man has a right to his opinion, and if "One Who Knows" believes his suggestions are practicable then he has a perfect right to voice them through the columns of CAGE BIRDS, but it would be much better if he were to append his own name to his communication, and let fanciers know whose suggestions they are considering. This Cage Bird Union is a public affair now, so far as the Fancy is concerned, and it is the opinion of a great many fanciers that those who take part in the discussion should put their names to their correspondence. If it is the wish of the Fancy that the Union should stand, is it not much better that the weak places which have existed during the past four years should be brought to the public notice, with the object of having the weak places either strengthened or entirely done away with? Is that not much better than trying to gloss over the faults of the Union, and building it up again without having the faults eradicated? "One Who Knows" states that he can prove we have no case when we object to Rule 22, but he forgets to prove it; in fact, he does not even try to prove it. No wonder! I think that those who have opposed the rule have conclusively proved over and over again that it is utterly unworkable, at least under the past management of the Cage Bird Union. Before I conclude, Sir, I would like to say that several fanciers have suggested that if "One Who Knows" does not care to sign his name he ought at least to add "very little" to his nom-de-plume.

W. REID.

SIR,—Mr. Reid says that I seem to have a certain antipathy to Mr. Crawhall. I am sure he is wrong, because, like Mr. Reid, I dont know him from Adam. But, as I said before, Mr. Crawhall was a strong supporter of the Union until they deservedly trod on his toes, when he turned right round and now openly abuses them. No, Sir, I have no antipatby to Mr. Crawhall, but I do like a man to be consistent. Mr. Reid says I am wide of the mark when I state that Newcastle seceded as a protest against the suspension of Mr. Crawhall. The mere fact of its being raised at a subsequent meeting of the society proclaims the fact that the seed of dissension was sown, and the antipatbic growth began from that time to reach a climax when the Executive Council couldn't see its way to be ruled by them. Mr. Reid seems to think that Mr. Crawhall didn't know when he made his entries that the said show was an unlicensed one. If it had been licensed, the Union rules would have been in the schedule, and surely to goodness anyone can see them; but the old proverb is perhaps appropriate: "There is none so blind, etc." If Mr. Crawhall had not been punished, couldn't every offender have adopted the same plea: "Please, Sir, I didn't see the Union rules in the schedule"? I still maintain that the Union did its duty, and that they would have been justified in giving Mr. Crawhall a longer sentence, not, Sir, *because* he was previously a strong supporter, but in spite of it. Mr. Reid says that other Union members offended in the same way as Mr. Crawhall without being punished, although, he says, the delegates knew very well what was going on; and then he asks if I don't think they ought to have been punished as well, and wouldn't I like to know why they weren't?" To both questions I answer "Yes." But it doesn't speak well for the honesty and straightforwardness of the delegates of No. 1 district if the cases were reported to them; and if the delegates now on the district have not the backbone in them to do their duty honestly and fearlessly, then they ought to be uprooted absolutely, and better and more capable men—men who will do their duty fearlesaly—be put in their places. What the Northern societies ought to have done, was not to have seceded, but to have had a general spring cleaning. Mr. Reid says it is cases like these that have made the Union a laughing stock among Northern fanciers. It is an anomaly to me why fanciers should vote for and appoint men as delegates, and because they don't do their duty, laugh at them. I think they themselves are the laughing stock. Who put them in their places? I don't see why the whole of the Union should be the laughing stock because of the incompetency of No. 1 district. With regard to the Birchley affair, I can assure Mr. Reid that I am fully conversant with the facts of the case. Mr. Reid seems to misunderstand me here. I want him to bear in mind that Mr. Birchley was not punished for staining the bird. I don't know very much about law (excepting that it is an ass), but I do know that the C.B. Union can't touch either Mr. Birchley, myself, or Mr. Reid, for staining a bird any colour we like so long as we don't cause it unnecessary suffering, and then the Royal Society for the Prevention of Cruelty to Animals steps in. Now I hope he understands that Mr. Birchley was not punished for staining the bird, but for exhibiting a stained bird; and it makes no difference whether Mr. Birchley saw the bird before it went to the show or not. The fact remains, he exhibited it. He was the guilty party. Mr. Reid can think otherwise or not. If (I say if advisedly) Mr. Birchley had stained the bird, and not exhibited it, would he have been punished? Decidedly not. Then, Sir, the crime must have been for exhibiting the bird, and not for staining. It would be easy for anyone to dish up the defence that he had only just bought the bird and didn't know it was stained, if the Union were to let everyone off then. Therefore, I repeat, justice was done, and not "done brown." Anyhow, justice or not, I should think it will have taught Mr. Birchley two things for the future: Not to enter a bird for a show until it becomes his own bona-fide property, and not to send a bird to a show until he has seen it in broad daylight. I should advise him to go in for Canaries.

T. JOHNSON.

SIR,—Why the discussion on the Cage Bird Union should centre around the Newcastle Society I cannot understand, unless it is that your correspondents have had the courage of their convictions, and have opposed to the very last, as any honest society would do, an act of injustice; fortunate for them that they are a powerful society and able to stand in spite of attack. What would have happened if it had been a smaller club? I'm seriously afraid they would have entered oblivion ere now. Mr. Robson and I are old friends, and I owe him a debt of gratitude which I can never repay for all his kindness to me when I entered the Fancy, and I know that our slight differences of opinion will in no way sever that friendship. In my previous letters I have pointed out the failings of the C.B.U., but have not suggested any remedy, which was my meaning when I wrote that "neither your article nor the numerous letters throw any light on the subject," that is, the subject of reconstruction. The general concensus of opinion as expressed in your article and your correspondents' letters is that reconstruction is necessary if the Union is to live—by "live" I do not mean to exist merely, but to live a healthy life of usefulness to the Fancy. Mr. Robson is slightly mistaken as to my suspension. He says I deserted; but that is not correct. When I received sentence I considered that a person who was guilty of an offence such as deserved a six months' suspension was not fit and proper to be a member of any honourable society; I therefore sent my resignation to six societies of which I was a member, and they each and all refused to accept it, and expressed the opinion that the sentence was unduly harsh. Thereupon I resumed membership until some months afterwards, when, being a member of the Yorkshire C.C., and also of the Open Norwich P.C., and wishing to show under the rules at shows which were not affiliated or licensed, I had no other course but to resign from all affiliated societies or risk further suspension. And for this I am charged with being inconsistent. I did not appeal to the Executive Council of the Union, but I did appeal to my brother fanciers, and the secretary of the Union knew the result of the local society's opinion; so that the executive knew of the local feeling when they upheld No. 1 District Committee's decision. And I still feel the confidence placed in me by the local clubs is of far more weight in the eyes of the world than any damage done to me by the Union. Perhaps here I may explain that in the early days of the Union I always pointed out in defending the then Rule 17 that the wording of it was "shall be liable to suspension," not "shall be suspended"; thus leaving room for discretion on the part of the committee according to the gravity of the case. Further, I always recognised the individual hardship, but defended it on the strength of the power it gave the Union over defaulting societies. I recognise now more than ever the individual hardship to the honest exhibitor, as it has been proved that the unscrupulous can ride the proverbial "horse and cart" through it, whilst the honest man who shows in his own name and admits it in spite of the fact that there were many ways of objecting to the methods by which the case was trumped up, is severely dealt with. The latter part of Mr. Robson's letter is entirely impraticable; he is simply advising what has been found to be unworkable, only in a more aggravated form he advises the lowering of the income from the smaller societies and the increasing of the expenses by paying delegates' expenses, in spite of the fact that the once reasonable balance has now almost reached vanishing point. He would prevent non-Union members from showing at Union shows; in other words, Union shows would be putting the noose round their own necks and taking a leap which would be another case of suicide. Nay, that suggestion has come too late; had it been included in the rule at first it might have been workable, but not now. Clubs want all the entries they can get at their shows, and neither the Palace nor the tiniest show can afford to refuse entries. No, the Union has had its chance, which it has missed. If it has to live now it will have to live by good works, not by coercion. With regard to Mr. MacPartling's letter, that gentleman has suffered more from his *nom-de-plume* would-be friends than from his more or less ignorant opponents. Most people who know Mr. MacP. know that he is the essence of uprightness and honesty of purpose. Personally I regret very much that he should have taken the reference to him in my letter amiss. I am sure that he will believe me that I had no intention of belittling him or taunting him when I wrote it and purposely used the expression "our representative" rather than use his name. He has given his answer to the question almost verbatim, and still I contend that he evaded the question, and left the impression that it was not a universal decision. By "universal" I mean not a full meeting of the executive. We all respect our representative, and know that he does all for the best, but why not say how many there were present when the case was decided. He was our representative chosen by us; he gives us reports upon the meetings which he attends, most truthful reports even when the tale is against himself. A paragraph at the end of Mr. MacPartling's letter calls for a reply. He says before I can have his full confidence I will have to be more consistent. Sir, I contend that it is Mr. MacPartling who is inconsistent. He says the verdict was not in accordance with his sense of justice. Yet he advises us to hand the special over. Would that not be an act of injustice? Would it not be eating humble pie? Could any self-respecting man or society do a thing which in his conscience he believes to be wrong and retain his self-respect? Or perhaps his charge of inconsistency is because I was once in favour of the Union and am now against it? But I should not be against it if its actions were right. I could give still another case of a graver injustice done a fancier, but out of respect for our friend I will refrain. I am not vindictive because of its actions towards me personally, and if its present supporters can resuscitate it they will find in me a warm supporter. But it rests with them to make it acceptable to the larger body of fanciers. I purposely refrained from answering the letter of a gentleman who took to himself the *nom-de-plume* of "Newcastle's Motto," but whose writings are of a Scotch flavour, because as a general rule writers under assumed names are not worthy of a reply. But let me tell this gentleman that both Mr. Hutchinson and Mr. MacPartling are getting blamed for writing this letter; also some which appeared previously; but I for one know that these two gentlemen are far too honourable to resort to such a style of writing. Before closing I will briefly reply to Mr. Reid's questions: (1) April 15th received by me April 18th, 1910. (2) Yes. (3) Yes. (4) No. (5) March 24th, 1910. The show at which the dispute arose was held in October, 1907. Is comment necessary?

T. C. CRAWHALL.

SIR,—Mr. Ramsden in his reply to me does not prove my statement in reference to himself and the London and Provincial O.S. incorrect. No one doubts that all his letters have been accepted as official communications, whatever notepaper they might be written upon. My statement was that the L. and P.O.S. beyond merely announcing their secession in the Press, had given no clue of their grievance, and that their delegate, who was a member of the executive, had made no suggestion to that body to remedy the trouble which caused his society's action. This was written April 11. I have no feelings whatever against Mr. Ramsden for doubting this, and if he can prove it incorrect, and say he had written the Union secretary with any clue of the L. and P.O.S. grievance or giving any suggestions, I shall be pleased, as the letters can be looked up, and we shall then know the reason of one society's withdrawal; to get this from all the seceding societies was one object of my original letter, with a view to the grievances being remedied. I see several further secessions announced, but in only one or two in-

E. A. BANNISTER'S

NOTED

BEDDING PLANTS.

LADIES AND GENTLEMEN.—Again I have the pleasure of offering you my well-known Bedding Plants. This year, at my new Nurseries, I have the finest crop of plants I have ever grown: all the finest varieties and strong vigorous plants with plenty of good roots. All will give a grand show of first-class blooms in a week or two. All plants have been well-hardened off, and will transplant well. All orders packed in damp moss, in strong boxes, and carriage paid to your door. Satisfaction guaranteed.

GERANIUMS ! GERANIUMS ! !

I have a grand lot of these fine plants, all the finest varieties. Double and Single, all colours, mixed, strong plants. These will make a grand show of bloom in a week or so. 12 for 1s.; 50 for 3s. 6d.; 100 for 6s. 6d.; carriage paid.

FUCHSIAS, large strong plants, all the finest varieties, and colours, mixed, 12 for 1s.; 50 for 3s. 6d.; 100 for 6s. 6d.; carriage paid.

IVY-LEAF GERANIUMS, large strong plants, 12 for 1s.; 50 for 3s. 6d.; 100 for 6s. 6d.; carriage paid.

MARGUERITES, for Window Boxes, white or yellow, strong plants, 12 for 1s.; 50 for 2s.; 100 for 4s. 6d.; carriage paid.

MARGUERITES, for Bedding, 18 inches, new colours, crimson, white, mauve, yellow, pink, blue, and many other grand colours, mixed; strong plants, 24 for 1s.; 50 for 2s.; 100 for 3s. 6d.; carriage paid.

PETUNIAS, Grand Prize Strain. This is the largest flowering Petunia in cultivation. Double and Single, grand mixture of colours, fringed flowers; strong plants, 24s. for 1s.; 50 for 2s.; 100 for 3s. 6d.; carriage paid.

CALCEOLARIAS, yellow or brown, strong plants, 24 for 1s.; 50 for 2s.; 100 for 3s. 9d.; carriage paid.

ZINNIAS.—I have a grand new strain of this lovely bedding plant, handsome mixture of colours. No garden should be without this beautiful plant; easy grower. Strong plants, 50 for 1s.; 100 for 2s.; carriage paid.

E. A. BANNISTER,

Plant Nurseries,

5, Grotto Road, Twickenham.

stances is any reason given. It would seem as if there were no valid reasons, but simply an attempt to end the Union, without any effort to mend it. The Union was thought a good thing for the Fancy two or three years back. Why not now? In reply to Mr. Reid's queries, they don't need any answer. It was the Council's decision against the Newcastle Society on the question of the Lister special which they could not accept, and not the fact that they laid themselves open to suspension. This decision was finally come to in August this year, after several considerations, and the Council couldn't very well enforce the decision until the 1910 show season arrived. Mr. Reid refers to this decision in his letter appearing April 16, as the origination of the crisis in the affairs of the C.B.U. in the North, and as I pointed out, here is a society apparently favourable to the Union, but rather than accept an adverse desision, resigns, although this decision only upholds the regulations appearing in all show schedules. Mr. Robson thinks the Council should have rectified the judge's error in awarding the special wrongly, but I believe the Council followed the universal practice, and followed the regulations no doubt laid down in the Newcastle Show schedule, viz., "The judges decision shall be final." Mr. MacPartling, although himself the only one against it, says if the case was plainly stated before the Fancy, he believed the Council would be upheld. He also asks the members to accept the decision. Still in face of all this, they resign, no doubt many other clubs in the North followed their lead, and according to Mr. Reid, originate the crisis in the affairs of the C.B.U. in the North. Several very valuable suggestions have appeared in your issue of the last two weeks, which should be considered, and I still would like an expression of opinion as to holding an adjourned delegates meeting, including the seceding socicties, when I believe all difficulties could be solved.

A DELEGATE.

Several letters unavoidably held over.

SOME BREEDING RESULTS OF THE 1910 SEASON.

Notes on the results of the present breeding season, or of any interesting happenings, are invited from the secretaries of societies and others, and must be accompanied by the sender's name and address in every case.

Grantham Cage Bird Society.

The breeding results to date are fairly good, viz.: Allen, 11 nice Yorks, doing well; Bond, 17 Norwich, some on the sticks; Lowther, 8 Norwich doing nicely; Ratcliff, 24 Norwich; Mann, 11 Norwich, also doing well; Craig, 2 Yorkshire; Waite, 9 Yorkshires; Messrs. Kirkby, Parson, Holmes, Askew have not started yet, but trust to breed a few good Mules and Hybrids later on.—W. RATCLIFF, secretary, Grantham C.B.S.

Glossop, Hadfield and District.

Having had a stroll round a few well-known fanciers' rooms in Glossop, I find the majority are doing very badly. No doubt it is the cold wintry weather that is the chief cause. On May 8th we had a very heavy snowstorm, and it looks as if we shall have more. The majority of fanciers are getting good eggs, but these generally won't hatch, and what young are secured are starved to death. I had a great surprise when I got into the room of Mr. Lawton's, the well-known Lizard breeder. He had over 40 young ones, and half of them doing for themselves. It seems he cannot go wrong. While I was in the room every hen was feeding, and "not half." It did not matter if I stood in front of the cage, they kept on feeding just the same. He told me he is using four eggs a day and biscuits. I notice Mr. Lawton is a great believer in dandelion. Well, the young ones are a really grand lot; they will make someone sit up this next show season if they have luck. He has plenty of size in his birds, which was always a good fault in his stock; and the colour is exceptionally good. The nest that took my fancy was one of four from the same parents as bred the last year's Manchester winner, which I bought from him. They are as nice a four as ever I saw, and ought to be heard of again. He has also a few Norwich, but they don't seem to be of the same class as his Lizards. As for myself, I have 16 hens and only six young ones. Yet I have had plenty hatched; but the parents have let them die through sitting on them too much. And clear eggs I have had. But I am hoping to do better as the weather gets warmer, as all my birds are in the pink of condition. I wish CAGE BIRDS every success.—HECTOR OLIVER (Glossop).

Meating-Off and Feeding Softbills

By JOHN FROSTICK.

No lover of insectivorous birds who wishes to succeed in his hobby can afford to be without a copy of this practical Handbook. It also contains notes on Bird Trapping, Cages, etc.

Price 6½d. (postal order) post free, from CAGE BIRDS, 154, Fleet Street, London, E.C.

ON THE TOP RUNG:

And How I Got There.

[That well known Scottish artist and fancier, Mr. Thos. Aitken, has undertaken a commission for CAGE BIRDS to visit within the next few weeks two or three prominent breeders North of the Border, and put on record for the benefit of our readers brief details of the methods by which they have attained success in the hobby.—Editor.]

Mr. Alexander MacFarlane (Glasgow).

Mr. Alex. MacFarlane (among his birdy friends termed "Mac") is a well-known personality in Norwich Plainhead circles in Scotland, having been a fancier of the variety for over twenty years and won upwards of 2,000 prizes with his birds.

Mr. Alex. MacFarlane.

During my interview with him, Mr. MacFarlane showed me a number of the handsome cups he had captured, most of which had to be won three times in succession before becoming his property, and one at least seven times! He impressed me as being a true and keen fancier, ever ready to impart his knowledge of birds to others when desired, being straightforward and to the point when answering all questions put to him.

Mr. MacFarlane's room is really an ideal one for the Canary breeder who has to be content with living in a city. It is a well-ventilated, top-storey attic, facing south-east, enabling the birds to get the full benefit of the early morning sun, which (its owner holds) is most essential for the breeding of good, strong, healthy birds. The cages are arranged in tiers, and are of the usual "box" pattern, with sliding doors in front, seed-boxes and water-bottles fixed outside, and removable sand-drawers, and they are painted white inside and black out. The floor of the room is covered with oilcloth. There is never a fire (nor any other artificial heat) in the room, while the top half of the window is always kept down four inches or so, a piece of wire-netting being stretched over this opening.

Coming now to the birds, Mr. MacFarlane has twenty-four pairs of Norwich Plainheads, twenty of which at the time of my visit were sitting on eggs. Besides these he also has half-a-dozen muling pairs, from which he is expecting something good. He is a great upholder of the Bullfinch type of Norwich, always giving type first consideration, then quality, then colour.

What do I feed my birds on? Well! I give principally the best Canary seed I can buy, and egg-food, which I make up of boiled eggs and sponge biscuit. I give, too, a little dandelion; also rape and maw seeds.

How do I put my birds up for breeding? I generally put up a buff cock with a yellow hen; or, of course, vice versa. I believe, however, in double-buffing. Some of my best birds have been bred from two buffs. Yes; and I inbreed a bit too, but not much. I am not afraid to pair a brother with a sister, provided they have got the right qualities in them.

I noticed that Mr. MacFarlane had the nest-pan corner of his breeding cages (which, by the way, measure something like 22 x 14 x 10) sheltered with a piece of card-board; also that he used the round, shallow nest-pans. Questioned as regards the latter, he informed me that he did not believe in the deep pans, as the youngsters were not able to reach far enough up to drop their excreta over the edge; they were thus compelled to sit in dirty surroundings, and not infrequently died through the evil effects of this.

Up to the age of nine or ten days Mr. MacFarlane feeds the young on dandelion, and then gradually weans them off.

Colour-feeding? I don't like colour-feeding at all, but in these days one has to do it. I should like to see colour-feeding done away with altogether, as it not only harms the birds, but is very troublesome and expensive. I use a good brand of red feed, and start with it when the young are ten weeks old, keeping it up till they are finished.

I start training the young for exhibition when they are six weeks old. I like the round top show-cage, as it not only shows up the bird better, but enables one to see over on to the back. The square top cage tends to make the bird "crouch," also it hides many a fault in some birds.

No, I am never troubled with red mite. I don't see why anyone should be provided the cages are cleaned out regularly.

"Are you troubled with sweating hens?"—"Yes, sometimes; but I have a good remedy."

"Let me have it, please."—"I get a cork and shape it into a rounded form, a little larger than the young ones, and drop it into the nest, which makes it impossible for the hen to crowd up her young ones together and sit close on them. The cork is light and does not crush the young; as the youngsters grow I substitute a larger cork."

Here are two more little tips: "If a hen shows signs of egg-binding a little millet seed is a good thing." "A piece of suet stuck in between the wires for the birds to peck at will keep them healthy and safeguard them from colds."

The Young Naturalist.

Prizes of 1s. and two of 6d. each will be given weekly for the best three anecdotes about birds written on postcards. Competitors must be under sixteen years of age, and state whence stories are taken. Two stars indicate the Winning Contribution; one star the runners up.

**The Skylark's Song.

Up in the lift we go,
Te-hee, Te-hee, Te-hee, Te-hee;
There's not a shoemaker on the earth
Can make a shoe for me!
Why so, why so, why so?
Because my heel is as long as my toe!

Sent by Leonard Green (age13), 14, Milburn Road, Gillingham, Kent.

*A Clever Polly.

A friend of ours has a Parrot that can talk beautifully. It will imitate, and calls out to passers by as if it were a human being. It has a grey plumage with a red hooked beak and claws, with a little piece of fringe on its head. Its owner has had it for many years and would not part with it for a great deal. It is a great favourite with all the customers of the shop where it lives, and never a day passes without someone bringing in a tit-bit for Polly.—Sent by Florence V. Tanner, 2, India Road, Diamond Road, Slough, Bucks.

*A Queer Nesting Place.

At the foundry of Messrs. Bradshaw and Son, Retford, for the third year in succession a Robin has built its nest in the wall close to the cupola. There, despite the sparks and fumes, she has raised a family, and flies backwards and forwards without heeding the men constantly at work in the shed beneath the nest, or the fierce heat which is generated at the base of the cupola only a few feet from the nest. The men at the foundry have taken a great interest in the Robin and its family, and in order to protect the nest from sparks have fixed up a shelter of sheet iron.—Taken from the "Sheffield Daily Independent," and sent by Mary Ann Townsend (age 12), 79, Doncaster Road, Conisbro', near Rotherham.

"Our Canaries": Part 1 of the best book ever published about domesticated Canaries is now on sale. Post free, 7d.

Books for Bird Lovers.

Brief particulars of some of "Cage Birds" SPECIAL PUBLICATIONS for keepers of birds, with post free prices.

THE HYGIENE OF BIRD-KEEPING, 1/1.—By W. Geo. Creswell, M.D. Thoroughly treats of modern hygiene (the science of health) in bird-keeping.

SEPTIC FEVER OR CANARY PLAGUE, 7d.—By R. H. Clarke, M.D. The only booklet published concerning this dread disease, which Dr. Clarke has given very special study.

THE NORWICH PLAINHEAD CANARY, 1½d.—By J. H. Payne. Pronounced by all experts to be a most valuable pamphlet concerning the breeding of the variety; written by one of our leading judges.

CANARY BREEDING FOR BEGINNERS, 7d.—By Claude St. John. A Practical, up-to-date guide to Canary breeding, designed specially for the use of the beginner. Deals very fully with the choice, sexing, and mating of the birds, feeding for condition, the cages and their fittings, the bird-room, egg-food, nest-building, rearing and moulting the young, colour-feeding, training for show, and all the difficulties likely to confront the breeder.

MEATING-OFF AND FEEDING SOFTBILLS, 6½d.—By John Frostick. No fancier of Insectivorous Birds who wishes to succeed in his hobby can afford to be without a copy. It also contains notes on Bird Trapping, Cages, etc.

SEEDS, FOODS, AND WILD PLANTS FOR CAGE BIRDS, 1/2. — By various leading authors. Full information on the seeds suitable for all cage birds, their food values, uses, etc., with descriptions and illustrations of the wild plants indispensable to the successful keeping of British and other birds.

HOUSE'S CANARY MANUAL, 1/2.—By C. A. House. A thorough, practical guide to the general management and breeding of Canaries, dealing fully with the breeding, etc., of every member of the Canary family, including the Roller (or Singing) Canary. An illustration of each bird, by the master Canary artist, Mr. H. Norman; exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge.

BUDGERIGARS AND COCKATEELS, 6d.—By C. P. Arthur. The breeding of Budgerigars and Cockateels is recognised as one of the most profitable and pleasure-giving sides of foreign bird-keeping. This eminent authority gives very full details upon how to keep, feed, breed, tame, and teach them to talk.

PET RABBITS, CAVIES, AND MICE, 1/1½.—By George Gardner. Full information on housing, feeding, breeding, exhibiting, and keeping for profit. A complete practical guide, with illustrations from photographs.

FOREIGN BIRDS FOR BEGINNERS, 1/1.—By W. T. Page, F.Z.S., etc., Foreign Bird Expert to "Cage Birds." A highly instructive Manual. It contains a magnificent coloured plate and a number of black and white illustrations. Indispensable to all keepers of Foreign Birds. Replete with useful hints.

BRITISH BIRD MANUAL, 2/3 (cloth bound).—By H. Norman; or may be had in two parts. Part 1: "Hardbills," and Part 2: "Softbills." Either Part, price 1/1, post free. Each part contains a beautiful and life-like coloured plate and numerous illustrations of birds and cages. Up-to-date information on the keeping of British Birds; full of extremely valuable hints.

COLOUR FEEDING OF CANARIES AND OTHER BIRDS, 8½d.—By J. W. Ramsden. Tells you how to mix the colour-food, and how to moult the birds to get the richest possible colour.

THE STOCK BOOK, 7d.—By G. E. Weston. Of our invaluable "Breeding Room Register" a well-known fancier has said:—"It makes bird-breeding easy." No breeder of birds can possibly afford to be without it. It simplifies the operations in the bird-room and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred. Contains both Pedigree, Breeding, Young Bird, and Show Registers of simple and unique character, in addition to useful account pages, and many invaluable "Hints for Emergencies."

AVIARIES, BIRD-ROOMS, AND CAGES, 2/3 (cloth gilt).—By H. Norman. Contains ten lovely full page photographic plates. A practical guide which deals thoroughly with the proper Building, Fitting, and Management of Aviaries and Bird-rooms, and the making of Cages.

YORKSHIRE CANARIES, 1/1½.—By H. W. Battye (Past President of the Yorkshire Union). Absolutely the very best Handbook dealing with the Yorkshire and its sub-varieties. Contains complete instructions upon Pairing, Breeding, Moulting, and successful Exhibiting, also how to treat in both health and disease.

NORWICH CANARIES, 1/1.—By C. A. House. Tells the fancier all that he needs to know to enable him to become successful as a breeder, and exhibitor of the Norwich Plainhead. The chapters on "**Forming a Stud,**" and "**How to Produce the Ideal**" are worth the cost of the whole book many times over.

BIRDS OF THE COUNTRYSIDE, 5/4.—By Frank Finn, B.A., F.Z.S. A handbook to the wild life of all our familiar British birds; their appearance and habits accurately described. With 12 beautiful coloured plates, and 118 photographic illustrations. A charming gift book.

PETS, AND HOW TO KEEP THEM, 5/4.—By Frank Finn, B.A., F.Z.S. Gives the correct method of housing, feeding, and managing every kind of pet; all sorts of animals are dealt with—monkeys, dogs, cats, lizards, tortoises, also gold and other fancy fish, while there is a large section devoted to birds. Contains many coloured plates and illustrations from photographs. Another charming gift book.

FANCIERS' PRINTING.—Fanciers requiring business notepaper, postcards, trade envelopes, etc., should write us for a quotation. We are now in a position to supply these at specially low rates combined with first-class work. Artistic memos., with block of any desired bird, and fancier's name, address, and 12 words of description, 250 2/-, 500 2/6, carriage paid.

Medicines for Cage Birds: Their Application and Doses.

By GEO. YATES, M.R.C.V.S.

(Continued from page 395).

Chlorodyne, technically known as "Tincture of Chloroform" and "Morphine Co.," seems to be very little used in the Fancy. Why this should be I cannot say. Perhaps its composition and odour make a difference. The latter is the only objection, although owing to its sweet taste, many birds will readily take it. It deserves far more attention than it has yet received, and will be found a valuable stock medicine.

To allow fanciers to see what they are using when administering this I give a list of its ingredients, omitting their respective measures and its method of preparation, as the compounding of these needs the skill of a chemist. Its ingredients are:—Chloroform, Ether, Tincture of Capsicum, Powdered Tragacanth, Morphine Hydrochlor, Atropine Sulphate, Extract Licorice, Oleum Menth Pip., Prussic Acid, and Treacle or Glycerine and Water. The term chlorodyne tells the novice very little, the same with many other preparations consisting of several ingredients. Its brown colour is due to the black treacle contained within it. A clearer preparation can be made by using simple syrup or glycerine in place of the treacle. Its uses are manifold. It is anti-dyspeptic, anodyne, astringent, hypnotic, and expectorant. Given for diarrhœa, from whatever cause, especially when accompanied by pain, in enteritis, peritonitis, etc., great relief is afforded.

Its principal specific use is that of an expectorant and anodyne, by its action on the nerve centre in painful chest affections, disorders of the breathing organs, colds, catarrh, asthma, bronchitis and pneumonia. The colourless preparation is perhaps the best for birds given in doses of 3 drops to every tablespoonful of water. As it so quickly affords relief there is no necessity, nor is it desirable, to repeat it for more than a few days. As an astringent in the treatment of diarrhœa and dysentery, it may need longer continuance.

A Popular but Dangerous Medicine.

Tincture of Aconite, used largely in the Fancy for catarrhal conditions, and affections of the respiratory organs, is a very popular remedy, but needs great care in its use. There are two preparations, the one of the British Pharmacopœia, and another known as Fleming's Tincture; the latter is several times more potent than the former, so for safety's sake the former is preferable. It should be accurately measured, and should not be given to a bird that is in an advanced stage of disease, but only in the primary or fevered condition, when it acts by reducing temperature, increasing the secretion of the body, both skin and kidneys. It lessens the frequency and force of the heart's action, and is useful in painful conditions. If given in too large doses or too rapidly the effect is increased. Great weakness and muscular inactivity follow, and so reduce the strength of the patient. Three or four drops in the drinking water night and morning for two days are quite sufficient for the smaller cage birds.

Calumba Root constitutes one of the vegetable tonics, and is rather bitter, owing to its neutral principal calumbin, but not sufficiently so when its preparations, the tincture and infusion, are well diluted. It has the advantage of being readily compatible with many other drugs, which most of the other vegetable tonics have not; e.g. it is compatible with the salts of iron. In addition to its recuperative action, it is an anthelmintic, having the power of destroying threadworms, or small round worms which inhabit the intestines of birds. The infusion is made by steeping 1 part of the root in 20 parts of cold water for some time. The tincture is made from 1 part of the root to 10 parts of alchohol 60 per cent., but of course is dearer. It is a splendid tonic. Owing to its action on the glands and vessels of the proventriculus the appetite is increased, and weakly or debilitated birds rapidly thrive with its use. Ten drops may be given night and morning in the drinking water for four or five days, or it may be again continued by allowing a period of a week to elapse. Continued for too great a length of time it upsets digestion; a few days should suffice to bring about the desired result.

Like Calumba, orange peel made into a tincture, 1 part in 4 parts of 90 per cent. Alchohol, composes a really good bitter tonic; 10 drops may be given in drinking water night and morning, or the infusion made of 1 part of dried orange peel in 20 parts of boiling water. It has only a feeble bitter taste, which disappears on solution in the above proportion. The syrup made of 1 part of the peel to 7 of syrup in the same doses may be prescribed where inappetence is pronounced owing to its pleasant flavour.

Opium I note is a much favoured remedy, although I do not often use it myself, as its smell is most unpleasant, and there are many other drugs which are quite as useful and less expensive. Its active ingredients are Morphine, Codeine, Narcotine, Thebaine, and several others. It owes its action to these agents, which are at first excitant, and secondly hypnotic. It is principally employed in the form of the Tincture, made of Opium, Alchohol, and water, and is used for diarrhœa and dysentery. Its action on the bowels is distinctly sedative and relieves pain. The Ammoniated Tincture, known as "Scotch Paregoric," contains, in addition, Benzoic Acid, Oil of Aniseed, and Solution of Ammonia. Either may be used—the former 5 drops in drinking water night and morning, the latter in doses of 10 drops.

Quassia prepared as an infusion, 1 part of the chips in 100 parts of cold water, is another of the bitter tonics, but owing to its excessive bitterness, it is of no use for internal administration. As a surface dressing for destroying bird lice, acari, etc., a small quantity in the bath may be advantageously employed.

Oil of Eucalyptus, owing to its insolubility in water and its pungent odour, is not a suitable form of medicine for birds. Its action as an expectorant is over estimated.

Cinchona bark includes another of the more useful bitter tonics, due to its active principal, Quinine. The other alkaloids contained within it are Cinchonine, Quinoidine, etc. It is incompatible with Ammonia, lime water and metallic salts. Its principal preparations are: Tincture Cinchona Co., Sulphate of Quinine, Citrate of Iron and Quinine, and Ammoniated Tincture of Quinine the two latter of which have been previously dealt with under the metallic preparations. Their actions resemble those of Calumba and Gentian, inasmuch as they act as bitter tonics, improving appetite and aiding digestion, whilst in addition to this they play an important role in specific or microbial diseases, being credited with this specific action owing to the remarkable effect produced in malaria and other diseases.

Where contagious disease is imminent the administration of Cinchona as a precautionary measure often wards off the disease or fortifies the bird's system to resist contagion. It markedly lowers the body temperature; its action in this respect is unquestionable. This action is referable not to increased loss of heat, but to diminished production of heat in the body. The tincture may be given in doses of six drops night and morning in the drinking water, and safely continued.

The Sulphate of Quinine is insoluble in water, or only very slightly so, but is entirely so when a little mineral acid is added. To attempt to place this in the drinking water would be analogous to placing stick sulphur in drinking water (as is commonly done) when one might just as well try to dissolve a stone. Quinine and its preparations are amongst the most valuable medicinal agents we possess.

The Crested Canary: Its Management Month by Month.

By A. F. FIFIELD (Oxford.)

(Concluded from page 427.)

June.

Most of the young birds should by June be on the perches, and doing for themselves. When they are about a month old I take them away from the old birds and put them in the flight cages. I still continue the egg-food, and supply plenty of crushed seed on the bottom of the cages for them to pick over; by this means I gradually wean them on to hard seed (canary seed only).

I discontinue giving green food to the young ones now, but keep them to canary seed till after the moult. I never give young birds any water in the raw state, but always dilute it well with Parrish's Chemical Food (a thing I am never without in the bird room). This I continue to do right up to the moult, as I find by this means I prevent inflammation setting in through the birds drinking too much, a thing which all young birds are more or less apt to do. I can strongly recommend this plan, as I have seldom lost any young when once on the perches since I adopted this method. If things have been going on smoothly, the second round should be hatching out now, and if the system laid down in the first round is followed out, good results should follow, failing accidents, of course, which cannot be foreseen.

When the second round batch of young can do for themselves, I transfer the lot from the first round from the flight cages to the aviary, and put the second lot in the flights.

July.

The third round should now be in progress, with the exception of a few backward birds. Any birds that are "run down," or showing signs of flagging, I take away and put in the aviary, as it is no good overtaxing their strength, especially if the birds are valuable ones; if you do so you will probably lose them in the moult.

I gradually break up the pairs at the end of August, and turn them into the aviary, so as to give them a little exercise before they start moulting. I now look over the young ones, and pick out the most promising, and cage them off in twos to moult. All the old birds I put through a treatment of weak Epsom salts and water for a week, so as to thoroughly cleanse the system; but don't overdo this or you will weaken the birds.

August.

Most of the birds will now be showing signs of moulting, and I again substitute saw dust for sand on the bottoms of the cages, not forgetting to give sand in a separate vessel. Any birds that are likely to be good enough for exhibition I cage off separately. Great care must now be taken to avoid draughts, as the birds are more susceptible to catching chills now than at any time, and if not properly looked after they will soon be taken off. Should any of my birds get wheezy I put two or three drops of eucalyptus oil in their drinking water, on alternate days, and I find this generally effects a cure.

In the meantime, I keep my eyes on the young stock, and should I see any looking "soft," I cage them off, and put them on a diet of bread and milk for a day or two, giving a pinch of maw seed on it daily. This will also apply to any of the old birds that are ailing.

September.

All birds should now be in a deep moult, and, as I use no artificial heat, I draw a curtain across them at night time, as the temperature fluctuates so at this time of the year, being hot in the daytime and cold at nights. So it is essential to keep them warm at night time to assure a good moult.

I now commence to give a little linseed in addition to the staple diet, as the oil from this imparts a gloss to the new feathers, and puts the finishing touch to the moult. This I continue till the moult is finished.

October.

The birds should now begin to fine down, and you can get some idea of how they are going to turn out. Any that I think are good enough for exhibition I run into a show cage frequently, to get them used to it, as nothing looks worse than a wild Crest in a show cage, because they are such feathery birds. As the birds finish moulting I scrub out the cages again, also nest pans, etc., and pack them away for the winter. I also look up the show cages, cases, etc., and give them all a good clean up, so that they may do service for the showing season. Any surplus stock I have on hand I now begin to advertise in Cage Birds, to help pay the expenses of the breeding season.

November.

I now cage off all the cocks singly, and turn the hens into the flight cages and aviary for the winter. In addition to the staple diet, I now give a little watercress or apple twice a week.

When my birds come back from a show I always give a dose of chemical food in the drinking water, as this acts as a pick-me-up, and prevents any ill-effects if the birds drink too much after travelling.

December.

Keep to the same diet as that prescribed for the preceding month, with the exception that you should give a little more hemp seed on very cold days, as this tends to keep them warm.

By following out these conditions, and with a little luck, I always reckon to make the Crested Canary hobby pay for itself. My motto is, "Patience and perseverance."

Canary Breeding for Beginners

By CLAUDE ST. JOHN.
Post Free 7d.

A practical, up-to-date guide to Canary Breeding, designed specially for the use of the beginner in the hobby.

Contains many helpful illustrations, and deals very fully, and in an easily-understandable manner, with the choice, sexing, and mating of the birds, feeding for condition, the cages and their fittings, the bird-room, egg-food, nest-building, rearing, and moulting the young, colour-feeding, training for show, etc.

All the details of bird-breeding explained, while it shows the way out of all difficulties likely to confront the breeder.

CAGE BIRDS, 154, Fleet St., London, E.C.

Some Seasonable Topics Considered.

By F. J. WEAVER (Wolverhampton).

A Lecture delivered before the West Bromwich Cage Bird Society on April 12.

The West Bromwich and District C.B.S. had a very interesting lecture, entitled "Seasonable Topics," at headquarters, Dartmouth Hotel, West Bromwich, on April 12th, Mr. G. Ley in the chair. It was given by Mr. Weaver, chairman of our sister society at Wolverhampton, before a good muster of members and friends. There were not as many present as we should like to have seen, but I expect the wet evening kept a good few fanciers away. I can assure readers of CAGE BIRDS it was well worth coming out in the wet to have heard the lecture, and those members who were absent missed a treat not very soon to be forgotten. Mr. Weaver delivered his lecture with the utmost of freedom. He was speaking for well nigh two hours without a break, and if it were not for his having to catch a train I think he could have gone on all night.

Mr. Weaver received great applause on rising. He started with thanks for the society's invitation, and said it was always a pleasure to him, when he could, to do good for a sister society like West Bromwich, or, at least, to try to do good for its members.

Causes of Birds Not Mating.

The lecturer began by an onquiry into the causes of birds not mating—a very seasonable topic. There were many reasonable causes, he said, which could be prevented by a proper method of pairing-up. There are, he continued, many fanciers both novices and "old hands," who do everything that is necessary in the way of preparing the stock birds, the cages and the bird-room, but who make the one false step of doing just the wrong thing when actually pairing the birds up. Many keep their cock birds in the breeding cages. Quite right, too. It is my way. And the hens are kept in large flights. Right again, if you want to keep them in condition all the winter, and then build them up to commence breeding operations. When making up their minds to start the birds off on the season's work, some fanciers simply catch up the hens from the flights, put them into the cages with the cocks, put in the nesting material and the box or bowl, and, in effect, say, "Well, there you are; I have done my part, now get on and do yours." What is the result of that haphazard way of starting? They bring about the very thing they have been preventing all the winter round—the birds soon get out of condition through so much fighting; you soon see feathers flying about; and, what is more, valuable time is wasted through the birds not settling down perhaps for weeks.

I will next give you my method, and I can tell you I have found it quite successful too, for while you could hear most fanciers say they were doing "pretty fair," I have generally been able to say, I am doing "great," and when they have said they were going on "middling," I have generally had the pleasure of saying, I am going on "rather decent." That has been the state of things in our district, at all events, and I think my method well worth the trying; at least, it would do you no harm to try.

Here is my way: Put the hens in their breeding quarters for at least ten days; then slip in the sliding partition (I prefer to have the double breeding cages); run in the cock bird in the one side, and leave the hen in the other. Then I gradually pull out the slide and leave a small space at the back of the cage after they have been there for a day or two. Then as you see they are becoming acquainted with each other, you will also notice that they will be feeding one another through the ½in. of space which you have left them by pulling the partition away from the back of the cage; they will get on very comfortable terms by the time they have been so placed for, say, seven days. Weather permitting, etc., and all in their favour, the slide may then be drawn altogether, and the birds will invariably "go to nest" right away.

I have never failed to get my first eggs within a week by these simple plans. To my mind, if not to that of others, this plan is much more profitable in the long run, and, what is more, there are no feathers knocking about my room. Again, there is no loss stamina which the bird must keep if you are going to have a successful season both in breeding and on the show-bench.

Other Causes.

Now, which is the best and safest plan to adopt? Ask yourself the question. Of course, there are many other causes of the failure to mate-up. Some young fanciers, perhaps, have not the necessary breeding cages, and so have to adopt the plan of putting the cock and hen together straight away. I advise them in that case to get the proper cages as soon as possible, as it will be the cheapest in the finish.

Another cause is the bad weather, which none of us can avoid. And yet another cause is the cocks mating-up to other hens, the two constantly calling to each other. In this case I should advise you to remove the offending birds from the room when at all possible, or else you will find, at least in a good many instances, that they will scarcely ever do any good as long as they can hear one another calling. I will give you furthr advice: do not put your breeding cages where the birds in other cages can see them. I mean, get all your cages on the one side of your room.

There is one matter which I have omitted to mention, and that is, what is the cause of birds not mating properly? I have already said that the birds commence fighting if you adopt the old method of putting the birds together straight away; now, it is the loss of the feathers by the constant tugging at one another that puts the birds out of condition. That is the cause, and they are therefore not in a fit state for breeding operations. The effects of this trouble at this time are perhaps felt throughout the season, so that valuable time and great expense are wasted.

My method, if such proved to be the case, would be to get the birds into condition again. First of all part them and give them time. Perhaps you may do good later, but do not spare any pains in trying to get them into condition again.

Concerning Nests and Nesting Material.

With regard to nests and nesting material, this is a case of choice. For the nests some use boxes and some bowls. The lecturer termed this topic "boxes versus bowls." If I were to use boxes, he said, I should prefer to have them shaped in the inside so that all the corners were well filled up. You will sometimes find in the square box that the corners are not properly filled with material, and when the hen gets her brood of eggs in, and starts "riggling" round in the box, one of the eggs occasionally will be missing. What is the cause? Why, the boxes, not being filled in the corners with the material, the egg generally gets stuffed into that space and so is spoilt and probably a valuable youngster lost.

The lecturer related that he went into an old fancier's room in his own district and found that he was using the old-fashioned nest baskets, and with good results too. Do not depart from any method, we were told, if you find you are successful with it, as that is the point that it is our ambition to gain. If you use the boxes do not under any consideration use those with perforated zinc bottoms. These have been the cause of many a fancier's loss of valuable youngsters; the young birds get their claws stuck in the holes of the zinc, and perhaps break their legs, or die consequently of fright, not being able to release themselves quickly enough. I should advise you to have wood bottoms to the boxes the same as the sides; bore one or two holes in to allow sufficient air to pass through.

Nest-bowl Linings and and Covers.

I will now show you what I use. Mr. Weaver here fetched an unglazed bowl from his pocket and said there is nothing like the unglazed bowls for the hens, both for sanitary purposes and comfort.

At this point the lecturer gave us a very good illustration of the nest-bowl he uses. But I do not use the wires, he said, as I make them all like this (showing same), it is so easy for the novice to take the bowl away without fear of tipping up the eggs. This, I am sure (Mr. Weaver explained how he did it), is the simplest of methods:—Get a piece of wire the same size as the bowl; twist it round, and then solder it securely, leaving the two ends of the wire hook shape, so that they can be easily put into two staples or hooks that are fastened on the side of the cage for that purpose. I make these all myself, and so save time and expense. Some fanciers say, "Oh! I am not going to that trouble; I will get the wires already made." But you do not get them always made to your own liking; at any rate, they are not made to my liking. To make the nest-bowl doubly secure and very rigid, I place the perch directly underneath the edge of the bowl.

(To be continued.)

Wild Bird Life.

May Bird Notes.

The weather is still cold and wet, and anything but pleasant for quiet country rambles, for one wants to stop and watch, and closely examine the doings of wild birds, especially at this season, when there is so much to see and interest. In spite of the inclement conditions, our resident birds have been busy, and nests in all stages of construction are easily located, besides others with eggs and young ones. Many youngsters are out of the nest and taking care of themselves. This remark applies especially to young Thrushes, some of which are almost as big as their parents, and are only distinguished by their more youthful appearance and somewhat shorter tail. Where young birds are located, either in the nest or perching, the old birds are very noisy and demonstrative, and anyone who is at all conversant with the doings of wild birds is soon made aware of the state of the domestic arrangements. Even the Finches are not able to conceal their feelings, and one can tell by the note and behaviour of the birds how matters are progressing. Of these, I think the Greenbird is the most easily understood. His long-drawn plaintive note and evident anxiety, as he keeps well in view of the intruder, show the merest novice that the nest is handy. Although the Greenfinch is such a plentiful species, and common everywhere, he is quite a favourite of mine, and I love to hear his song-talk along the breezy hedgerows in early summer. He is an exemplary parent and feeds his lusty brood to repletion. The nest is snugly lined with hair and wool, and generally placed in a well-sheltered position. The majority of birds have no doubt a liking for special sites to build in if obtainable, and I have frequently noticed the nest of the Greenbird so placed that the drooping foliage of the wild clematis effectually screens it from view, and also from heavy rains and wind. Such a position calls to one's memory the lines of the poem:—

"A cradle for the Greenbird's bed,
A flowery covert for her head,
A forked pine supplies."

Although the bird books tell us that the Robin's nest may be found in a variety of situations, I have noticed that he has a great preference for an ivy-covered bank, and of some half-dozen nests found this season, five of them were so placed.

The Jay in Scotland.

The Jay is an exceedingly local species in Scotland; so much so that many people say it does not exist in that country as they have never seen or heard of one.

Moving Northward.

The Hawfinch is moving northward. At one time it was almost unknown in Yorkshire, and now the Westmoreland County Council is obliged to include the bird in the schedule of protected species, to save it.

Great Spotted Cuckoo.

The only European breeding resort of the Great Spotted Cuckoo is the South of France, where it is parasitic upon various species of Crows and Magpies. The Blue-winged Magpie is most generally chosen as a foster parent, the Cuckoo often depositing several of its own eggs in one nest of the Magpie.

Variety in Sea Fowl.

The study of wild fowl is most interesting. Besides the different sizes and shapes and the various modes of living, there is an endless change of colour as the different species are seen. Black, white, and grey are common, and colours resembling the sea and rocks, besides some very brilliant metallic hues among the Ducks, Teal, etc., are to be observed.

The Little Owl.

The Little Owl was at one time only known as an occasional visitor to these shores, but many have been released and have done well, but unfortunately are killed on sight by the "man with the gun." The bird is no bigger than a Thrush, is somewhat spotted, and unlike most Owls flies by day as well as by night. It has, too, a very graceful and easy bight.

Feathered Gipsies.

The little Long-tailed Tits might well be called the gipsies of the feathered race. They are never in one locality for any length of time, and do not appear to have any homing instinct. As soon as the brood is large enough to travel, they quit the neighbourhood of the nest, and wander hither and thither all through the autumn, winter, and early spring, and wherever they are at the nesting time they seek a suitable site, and remain there just long enough to nest and rear a brood, when they are off again "to fresh fields and pastures new."

The Great Secret of How To Breed Clear Mules

Is revealed in Part 2 of

"CAGE BIRD HYBRIDS"

(On Sale Everywhere to-day.)

This notable work by that great expert and authority CHARLES HOULTON (associate editors C. E. Weston and C. A. House) is being published in 8 Monthly Parts, SIXPENCE EACH.

TWO COLOURED AND TWO ART PLATES WITH EACH PART.

This is a standard work, written by an acknowledged expert, and prepared for publication by experts. It has been designed as an authoritative and carefully practical work, embodying in the simplest and most straightforward language all that there is to be known on the peculiarly difficult and scientific subject of Hybrid Breeding.

There are no less than Sixteen Coloured and Sixteen Art Plates. EACH PLATE IS A PERFECT STUDY OF AN INDIVIDUAL HYBRID—not a pretty group suitable for a children's picture-book, but a plate that shows the correct colour, the correct shape, the present-day type and general characteristics of modern hybrids.

A PRACTICAL BOOK FOR PRACTICAL FANCIERS.

It will, we feel sure, be generally conceded that "Cage Birds" has produced in "CAGE BIRD HYBRIDS" a dignified book on a difficult subject—a standard work of the highest merit and a fitting monument of the hybrid breeder's art.

Part 2 is now on Sale. It tells the secret of the breeding of clear and even-marked Canary Mules and Exhibition Dark Goldfinch-Canary Mules. The Two Lovely Coloured Plates depict (1) a Clear Yellow Goldfinch-Canary Mule and a Dark Yellow Goldfinch-Canary Mule (2) the Bramblefinch-Chaffinch Hybrid.

Ask for Part 2 "CAGE BIRD HYBRIDS," at all Bookstalls or Newsagents, or fill up the attached Order Form and we will send it you packed flat in cardboard, post free for 7d. (Postal Order).

Part I can also be obtained on the same terms; or for 4/6 prepaid, we will take orders to supply the complete work—in parts as published. Send your order at once, with remittance to

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bona-fides* of either buyers or sellers In all transactions the adoption of our Deposit System should be insistedupon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-datcd Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit will be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—6d. for the first sixteen words. One Halfpenny per Word for each word over sixteen. MINIMUM, 16 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first Sixteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines 6d., 9d., 1/-, 1/6 according to size.

Small prepaid advertisements of a general nature and not connected in any way with the Cage Bird Trade are inserted at the rate of ½d. per word throughout. Minimum 12 words 6d.

Advertisements must in all cases bear the bona fide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

APPLIANCES.

IMPROVED hoppers, machine bent, glass fronts, japanned, 2½ in. 1/6, 3 in. 1/9 dozen: Allerton, Bordesley Green, Birmingham.

DOUBLE breeding cages, with solid backs, of all kinds, made to order, 4/6, 5/2, 5/8 each, seed box, water glasses; price list free; the oldest maker in the trade: Job Hargreaves, 37, Chapel Walk, Eccles-hill, Bradford.

PORTABLE bird houses, outdoor aviaries, special Budgerigar aviaries, wire flights: Portable Building Co., Shoreham, Sussex. Catalogue.

CAGES.—Norwich, Yorkshire, and Border show cages, 1/3 each, six for 6/6, 12/- per dozen: McKeand, Cage Manufacturer, Castle-Douglas.

BOX cages, well made and finished, for boxing off Canaries, etc., 1/6 each; set of materials for making same, 9d.: Allerton, Bordesley Green, Birmingham.

NOTICE.—Grand new Palace-shaped, three-compartment, drawing-room aviary, 3ft. long, 3ft. high, fitted with sand bottoms, movable partitions 10/6 carriage paid: worth 40/-; approval: McKeand, Cage Manufacturer, Castle-Douglas.

"AVIARIES, Bird-rooms, and Cages: Their Construction and Furnishing." A practical up-to-date guide on this most interesting subject, by Mr. H. Normau. It is fully illustrated with ten full-page photographic plates, and numerous helpful sketches, bound in cloth, gilt, 2/3 post free: From the Publisher, CAGE BIRDS, 154, Fleet-st., London, E.C.

250 Nightingale traps, out of sight, latest, 10d. each, wire 1/6; 500 spring net self-acting traps, 9d., wire 1/3; 100 pair clapnets, 9ft. by 4ft., each net all complete, 4/-, wire 8/6: thousands of approved appliances, cheap; birdlime, 4d. box; catalogue, 48 pages, also book on catchers' feeding, 7d., post free: Samuel Young, Net Manufacturer, Crewkerne, Somerset.

R. KREMNER, 104, Tib Street, MANCHESTER.

EVERYTHING!

The word, **"EVERYTHING,"** puts the whole matter in a "nutshell," For it matters not what you may require for Aviary or Bird-room I have it; whether Articles, Egg Foods, Seeds, Medicines, Red or Yellow Feeds, Pedigree Rings, etc., all will be found in my **Original** Catalogue. Remember I was the first to ever publish a Catalogue of this description; others are all more or less mere imitations. Sent free on receipt of address.

W. RUDD, THE Bird Specialist, NORWICH.

BOARDS FOR CAGE MAKING.

Cut and planed ready for nailing; fronts made to fit same; stamp ready.—Joshua Naylor, cage maker, Police-st., Brighouse.

SUPERIOR ALUMINIUM RINGS

METHODICAL BREEDERS should not omit to mark their birds with these high-grade rings; they are the lightest, neatest and most reliable made, yet inexpensive. The rims are perfectly round and smooth, and the numbers cannot fill with dirt. These are the reasons why they have been used and recommended for years by leading fanciers. "Cage Birds" says:—"One of the best samples we have seen." 150 for **4/-**, 100 for **2/9**, 75 for **2/3**, 50 for **1/6**, 25 for **10d.**, post free, carefully packed. Consecutively numbered with or without year. Supplied **with or without flanges.** Give them a trial this season, and test their superiority for yourself. **Breeding-room Registers, 7d.** each, post free.

TO ADVERTISERS:-

When communicating respecting the Repetition, etc., of Advertisements, please state clearly the Number of the Page, and the Column in which the Advertisement last appeared.

Various Canaries

If you require any of the following Varieties, you will find them such value as cannot possibly be — procured elsewhere.—

NORWICH PLAINHEADS. Cocks, Clear Yellow, 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, 30/- upwards. Clear Buff, 6/-, 6/6, 8/6, 10/6, 12/6, 15/-, 20/-, upwards. Marked, 5/6, 6/6, 7/6, 10/6, 12/6, 15/-, upwards. Hens Clear Yellow, 3/6, 4/-, 4/6, 5/-, 7/6, 10/6, 15/-, 20/-, 30/-. Clear Buff, 3/3, 4/-, 5/-, 7/6, 10/-, 15/-, 20/-. Marked, 3/-, 4/-, 5/-, 7/6, 10/-, 15/-. Pairs Norwich Plainheads, matched for immediate breeding, 7/6, 8/6, 9/6, 10/6, 12/6, 15/-, 20/-.

CRESTS.—12/6 15/-, 20/-, upwards per pair.

YORKSHIRES. When I say Yorkshires, I mean it — not something with feathers on merely, the breed of which would puzzle anyone to define cocks, 6/6, 7/6, 8/6, 10/6, 15/-, 20/-, 30/-; hens, 3/-, 3/6, 4/-, 4/6, 5/6, 7/6, 10/6, 15/-; pairs matched for breeding, 8/6, 9/6, 10/6, 12/6, 15/-, 20/-, upwards. These birds possess length, type and quality, and have no equal elsewhere, at anything approaching similar prices.

SONGSTERS, par excellence. These cannot be touched elsewhere for quality and value; sing anywhere, pure bred Yorks., Norwich or Mules, 6/6, 7/6, 8/6, 10/6; thousands to select from.

MULING HENS.—For light or dark muling, grand Sib hens, mostly clear buff, and of pink-eyed strain, 4/- and 5/- each; a few yellows, same strain, 6/6, 7/6; no dark blood in them; light Mule breeding, 3/6; dark, 3/-, 4/-; feeding hens, 2/6, 3/-, 4/- each.

CINNAMONS.—12/6, 15/-, 20/- pair; hens, 4/-, 5/-, 6/- upwards.

DUTCH FRILLS.—30/-, 40/-, 60/- each.

LIZARDS.—10/6, 12/6, 15/- pair.

Goldfinches, Bullfinches, Linnets, Parrots, Budgerigars, best and cheapest procurable. Travelling cages in all cases 3d. extra. All birds on approval. A few 1910 Norwich cocks and hens ready.

W. RUDD, THE Bird Specialist, NORWICH.

FOREIGN BIRDS.

BUDGERIGARS, young, outdoor bred, 3/6 pair: Moore, Dentist, Cambridge.

BOOKLET FREE.

Finest Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all time to send my Parrots on four week's trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among Grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all Parrot buyers. Full details of our original system of selling Parrots on four weeks' trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard. Telephone No. 40 Morecambe.
PARROT AVIARIES, MORECAMBE

JOHN D. HAMLYN,

221, St. George's Street, London Docks.

Arrival of Australian Birds.

AUSTRALIAN SHELL PARROTS or BUDGERIGARS. NOTICE! ALTERATION IN PRICES.

Only few birds left. These are Australian Budgerigars, from the Adelaide district, and are strongly recommended for fresh blood, being the first imported birds received here for years. To be continually breeding from the present French, inbred stock is dangerous, for it is only a question of time before the youngsters will sicken and die. I have received a few enquiries for so-called "tame" Budgerigars, these I do not supply. In the next issue I shall give away the so-called trick of taming Budgerigars. How these poor "faked" birds are brought to the perfection of so-called tameness:

One pair for 4/-, including package.
Six pairs for 18/-, including package.
Six hens for 15/-, including package.

Only sold in above quantities; cash will be returned if not approved, but birds must be returned same day.

INDIAN STOCK.

One Ourang-Outang—otherwise "Mrs. Kelly"—still for sale. A very amusing article concerning this interesting animal appeared in the "Morning Leader," 18th inst., her price is £50; one Chimpanzee, female, good size, £40; 25 Rhesus Monkeys, 25/6; 14 monster males and females; only 2 singing cock Shamahs left, 40/6 each; 2 Green Bulbuls, or Fly Catchers, 40/6 each 2 White-crested Babblers, 25/6 each; 3 White-throated Thrushes, 25/6 each; Violet Tanagers, cocks, 12/6; hens, 12/6; Golden-shouldered hen, 25/6; Pietris Tanager, 25/6; Rufous-throated Tanager, 20/6; pair Cuban Finches, 40/6; cock Virginian, 25/6; Green Cardinal, 30/6; pair Tovi Parrakeets, 40/6; pair Mexican Jays, 50/6; cock Blue-throated European Warbler, very fine, 10/6; Long-tailed Glossy Starling, 30/6; American Bunting, 15/6; Zebra Finches, only a few, 6/6; Ruficauda, 10/6; Long-tailed Grass, 10/6; Yellow-rumped, 14/6 pair; Cutthroats, 3/-; Cordon Bleus, 3/6; Waxbills, 2/6; 12 splendid mixed birds, 12/6; Amazon Parrot, 40/6; Macaw, 70/6; Hornbill, 100/6; Rock Parrot, 20/6. The largest variety of Foreign birds in Great Britain. Visitors to London are respectfully requested to call and view stock and judge for themselves as to who are naturalists and who are not.

Kindly note, all my stock is kept without any artificial heat. Cleanliness, with fresh air treatment is thoroughly studied at **221, St. George's Street, London Docks.**

TO DEALERS ONLY.

100 pairs of Senegal birds, same assortment as sold in Bordeaux for £5 5s.; 50 pairs, 60/6, or 12/6 dozen; cash with order only.

HEALTH & STRENGTH

No lover of insectivorous birds who wishes to succeed in his hobby can afford to be without a copy of this practical Handbook. It also contains notes on Bird Trapping, Cages, etc.

Price 6½d. (postal order) post free, from CAGE BIRDS, 154, Fleet Street, London, E.C.

LATE NEWS.

Being desirous of disturbing our readers' holiday arrangements as little as we possibly could, we last week made no announcement of the necessity for going to press with this issue of our paper one day earlier than usual—a necessity arising out of the arrangements made for the funeral of our late revered Sovereign King Edward the Seventh. Our plan of leaving them with Whit-Monday free and inserting such advertisements and news as reached us on the Wednesday morning under the respective special headings of "Late Advertisements (unclassified)" and "Late News," upon pages specially kept open for their inclusion, is one which, we trust, will prove an acceptable solution to the somewhat difficult position.—Editor.

Kindly note my change of address, writes Mr. R. J. Adams, from Pickwick Street, to 109, Tithebarn Street, Liverpool.

At the time of going to press, but too late to effect the alteration, we are requested by Messrs. Ogden Bros., of Bradford, to withdraw from their advertisement, the two special Yorkshire cocks, priced respectively at 40s. and 35s.

We have engaged Messrs. Vardy and Houlton to judge at our open show on November 25th and 26th, writes Mr. Jas. Irlam, hon. secretary, Sale and Dis. Open C.B.S. Also our subscription is now 4s. per annum instead of 5s. as before, all members to pay same, which is due before July 2nd. Intending members should write to me at 97, Cross Street, Sale, for particulars.

I have been appointed secretary of the Greenwich and Deptford C.B.S., succeeding Mr. Putner, writes Mr. H. R. Heine, 11, Hardman Road, Charlton S.O., Kent. The annual country ramble of the society is to take place at Hildenboro', Kent, on Sunday next, the 22nd inst. Members and friends meet at New Cross Station (S.E. Railway) in time to catch the 9.25 a.m. train.

A Ramble at Torbay.

The Torbay O.S., writes Mr. J. N. Jeffery, the hon. secretary, had arranged for a ramble on May 11th, but as it was abandoned, Mr. P. W. Mugford, the well-known Mule breeder and British exhibitor, and myself, decided to "do" the course. Leaving Paignton at 2.10 we reached Torre at 2.30, and continued on the Newton Abbot road as far as Laws Bridge, where we entered the grounds (a most lovely wooded estate) of Squire Brown, and emerged above the picturesque hamlet of Daccombe. Passing through this latter place we came to a stiff climb of half a mile, and after crossing the old Newton road, we made for Hacombe. This is undoubtedly one of the loveliest parts of Devonshire from a birdy man's point of view. Passing on the outskirts of Hacombe Woods we were attracted by a rather gruesome sight; we found suspended from a hazel branch and fastened in a horizontal position between two fir trees a Rook, a Kestral Hawk, and six Stoats. Having secured a wing of the Hawk, we continued our journey on a "carpet" of beech nut husks for several hundred yards. Having now reached a spot called "No Man's Land," we turned off in a grassy lane and came across several nests. A Blackbird brooding her young was most interesting, as she was loath to leave her brood. There were four young nearly a week old. A little farther on we came across a bird of the same species that had just left its nest, and we were able to get quite near them. Next we came across two fledged Robins who had evidently left their parents. We were now nearing Coombe-in-Teign-head, and quickly passed through the village on to Coombe Cellars, a famous hotel on the banks of the river Teign, for picnic and coaching parties to stop at, this being the place where our society had arranged to take tea. Having attended to the inner man and drunk to the health of King George, we made for Milburn Hill, and found Chiff Chaffs and Yellowhammers plentiful; and after a most lovely, if rather tiring walk, we reached Newton Abbot station at 7.30, and entrained for Paignton. We reached home just after 8 o'clock.

CLUB NOTICES.

Choppington C.B.S.—May 21, Railway Hotel. Last meeting to enrol new members, etc.—G. H. Seely.

Midland Roller C. May 26, Headquarters, Swan and Peacock, Wolverhampton, 8. Translation by Mr. Jacquemin.—J. W. Willows.

GREENWICH AND DEPTFORD.

Monthly meeting (Mr. E. Meades in the chair) held at the Cecil Rooms, Woolwich Road, East Greenwich, on 12th May, at 8 p.m., when a goodly number of members were present. Among the general business was the election of secretary to succeed Mr. F. Putner, who has found it necessary to resign owing to pressure of other engagements. Mr. H. R. Hearn, 11, Hardman Road, Charlton, S.O., Kent, takes over the office. Mr. Putner was thanked for the very capable manner in which he had discharged the duties of secretary. The annual country ramble takes place at Hildenboro', Kent, on the 22nd inst., when it is hoped that as many members as possible will attend. Those wishing to be present should send in their names to Mr. Hearn at once in order that the necessary arrangements may be made. The train leaves New Cross Station, S.E. Rly., at 9.25 a.m. The outing will be about 3s. inclusive. The return journey will be made by the train leaving Tonbridge at 8.9 p.m. J. H. Benn, Esq., M.P., has very kindly consented to officiate as president of the society. Young Bird show date, 21st July, Mr. Robson judge. As matters stand at present, the season promises to be a very favourable one.—H. R. Hearn, Sec.

LATE NEWS: Continued on page 479.

Club Reports.

LEEDS C.B.S.

Meeting held at "Lockhart's," May 7. There was only a moderate attendance of members, which is to be regretted, as Mr. C. Hunt's paper on "Britishers" was undoubtedly the most instructive lecture on the subject that has been given to the society of late years. The classes for table shows to be held on 4th June were arranged as follows:—Yorks 2, Nor. 2, A.O.V. Can. 1, Lin. 1, Gold. 1, A.O.S. Brit. 1. No schedules are to be sent out, and birds are to be entered same evening as show at 7 p.m. Judge, Mr. W. Hornby. The following four fanciers were elected members:—Messrs. Eastwood, Long, Waind, and Leahy. J. CHAMBERS, Hon. Sec.

SWANSEA AND DISTRICT C.B.A.

Monthly meeting held on May 10th, Mr. J. W. Ford in the chair. Owing to local attractions on June 10th it was decided to alter the date of the first feather show to July 2nd. The classification was then proceeded with, and it was decided to give 34 classes. Two specials were given, one by Mr. D. A. S. Longden for the best British, and the other by Mr. E. M. Evans for the best Norwich; and there were promises of several by the next monthly meeting. The spirit of the meeting leaves the impression that our first feather show will prove one of the most successful the society has held. Two new members were made in Messrs. J. Mock and J. E. Jefferies. At the next monthly meeting the remaining classification of the table shows will be dealt with, judge Mr. H. Jenkins.—S. H. GEORGE.

METROPOLITAN C.B.A.

Monthly meeting held at Crown Hotel, Lavender Hill, S.W. A discussion took place regarding a class for Crests and Crest-breds at our young bird show; and it was decided to provide one. Mr. Macgregor, our chairman, then called upon Mr. G. Gardner to give us his promised lecture on the Norwich Plainhead. Mr. Gardner said he liked the Norwich to be perfect in shape and quality first, and then to possess good colour; also he did not like the body to be produced by a quantity of hemp seed. A marked improvement was to be seen this last season in the head of the yellows at the Crystal Palace, but the buffs were still very bad. A most interesting discussion followed, and many questions were asked and ably answered. A well-known N.P.H. breeder in the person of Mr. Curtis, was present, and made the evening very interesting.—G. HARWOOD, Hon. Sec.

WIGAN AND DISTRICT C.B.S.

Usual monthly meeting, held May 7th, at headquarters, Legs of Man Hotel, Mr. E. Ball in chair. There was a very good attendance. A very heated discussion took place over young bird show. It was carried that show be held on June 11th. The Cage Bird Union matter was up for discussion, and seeing the people at the head of affairs seem to be trying to straighten the tangle out, we decided to retain our membership. The secretary was instructed to pay fee for the year. A class each for Goldfinches and Bullfinches was added to young bird schedule. Four specials were promised by members present. We had a discussion on the merits of greenfood, its advantages and disadvantages; in which good old dandelion "held its own." After passing a vote of sympathy with the Royal Family in their great sorrow, a very pleasant and instructive meeting was brought to a close.—WM. DYER, Assistant Sec.

CITY OF GLASGOW O.A.

Committee meeting held on May 14th, Mr. D. Black (President) in the chair, supported by Mr. G. Marlin (Vice-President), and a good turn-out of members of committee. The meeting was held to deliberate upon the business of the half-yearly general meeting on May 21st. After a good deal of discussion it was agreed to recommend to the general meeting that: "The meeting pass a resolution not to allow visitors to the hall on the Thursday previous to the show, and all exhibits brought to the hall on that evening be handled and staged by the officials in attendance for that purpose. That the staging be so altered that visitors may not be in such close proximity to the judges during judging." It was also agreed to recommend that an information board be erected. A long discussion took place on the classification, and it was agreed to recommend that in the Belgian section Classes 20 and 21 be made one; in Norwich section, that Classes 31 and 32, and classes 33 and 34 be made into two; that Classes 43 and 44 be made 4 instead of 2 as at present; that in the British section classes 84 and 85 be abolished, and a class substituted, namely, any other variety small British bird not otherwise classified; and that Class 91 be altered to read: "Foreign birds, small, not larger than Java Sparrow." The meagre attendance at our general meetings in the past year or two was commented upon, and the committee think it is not widely enough known; that the general meeting is open, not only to past members, but to all fanciers intending to join, and they appeal to all such to come forward and show their interest in this, the oldest society in Great Britain.—ALEX. MACDONALD, Sec.

MIDLAND COUNTIES Y.C.C.

General meeting held at the Crown Hotel, May 12th, when there was a good attendance. Mr. Wells occupied the chair. The meeting passed a resolution of sympathy with the Royal Family on the lamented death of His Majesty King Edward VII. In submitting the first annual report, the Secretary took the opportunity of congratulating the club on the success which had attended their labours during the past show season. He pointed out the trying times experienced at the beginning of the club's history and the heavy amount of detail work necessary to get everything into thorough working order, but that thanks chiefly to a hardworking and conscientious committee these difficulties had been surmounted. The Secretary submitted the averages of entries at the shows which secured the club's patronage. These worked out at 13.79 for champions and 14.83 for novice sections. The clubs to receive the patronage last year were: Hanley, Wolverhampton, West Bromwich, City of Birmingham, Tamworth, and Long Eaton; and the displays of the variety as seen at these shows have never been approached in the Midlands. The sectional winners proved to be Messrs. P. V. Williams in champion, and E. J. Evans, novice, to whom the Secretary offered congratulations, as well as to Mr. J. C. Caine, who, in his first effort with the variety, achieved the distinction of taking second place in the novice section. The probable winners in each section were in doubt right up to the last show. One point which is fully borne out by statistics is that clubs securing our patronage are secure against anything approaching failure in the section which has at the patronage shows been the feature of the exhibitions. The balance-sheet, showing a balance of revenue over expenditure of 7s. 4d., was adopted. The following office-bearers were elected; Mr. P. V. Williams (President), Mr. W. C. Wells (Chairman), Mr. A. Paddock (Hon. Sec. and Treas.), Messrs. Burke, Beck, Mole, Allen, Uzzell, and Steventon Birmingham representatives on committee, and Messrs. Foster, Evans, Raybould, Lawton, Hawley, and Tipping outside representatives. The following resolution was carried unanimously: "That the club promote a challenge trophy, to be won three times, not necessarily in succession, before becoming the property of the winner, and that Mr. P. V. Williams's success of last season count towards the three." About 40s. was given or promised in the room. The following new members were elected: Mr. T. Widdowson (Loughboro'), and Mr. W. Andrews (West Bromwich). Votes of thanks to Mr. A. E. Bishop and Mr. Webb concluded the meeting.—A. PADDOCK, Hon. Sec., 9, All Saints Road, King's Heath.

SCOTTISH METROPOLITAN OPEN DERBY.

On March last we sent out to nearly five hundred Scotch Fancy and Belgian breeders—most of whom had exhibited during the season 1909—a copy of our membership ticket for this year, requesting those who intended joining to send in their reply by the first week in May. This was done with a view to save further printing and postages. Unfortunately this has not worked out as expected. So there had to be sent out a very large number of recall notices, and I am glad to inform you that from the satisfactory replies received up till to-day, the 12th, our membership is being well maintained with that of last year. The cards yet to be accounted for exceed 350. Now, we would appeal to these gentlemen not to return their cards without giving the matter their serious consideration, and they will realise it to be their duty to support this "Derby." I have finally decided to resign the secretaryship at the close of the season. It is for this reason that I am personally anxious, as regards my own official work, to make this year the best of the three. Can this be done? Yes. Out of these 350 there should be sufficient to bring this about.—J. R. MEIKLE, Sec.

SOUTH LONDON COL. AND F.A.

General meting held at headquarters on May 12th. Present: Mr. A. Leyer, in the chair, Messrs. T. J. Child, N. Caunter, A. Denny, W. Lucas, G. H. Phillips, W. Whitman, J. W. Jeffries, J. Clerk, A. Wood, J. Blackmore, C. Cornish, J. A. Roberts, and the Hon. Sec. The following were elected: Mr. J. Collins (Toubridge), Mr. A. Wood (Southwark), and the following nominated: Mr. A. Reggler (Deptford), Mr. R. Grant (Coventry), Mr. H. Clymber (Lewisham), and Mr. A. Beard (Bermondsey). The balance-sheet showed a cash balance brought forward of £24 15s. 9½d. the receipts totalled £98 6s. 10½d., while the payments were £69 13s. 7½d., leaving the cash balance in hand December 31st, 1909, £28 13s. 3d., with assets valued at £24 1s., totalling £52 14s. 3d.; liabilities to members for annual show prize money, £20 8s. 4d., leaving an actual cash balance in hand, £8 5s. 11d. The balance-sheet was accepted. The judge elected to officiate at the annual show, November 23rd, was Mr. J. Robson. Mr. A. Lever then appealed to the members on behalf of the widow of the late Mr. W. Westbrook (Rotherhithe), who died leaving eight children unprovided for. It was proposed and carried unanimously that 10s. 6d. be given to Mrs. Westbrook from the funds of the Society for her immediate needs.—G. A. JEFFERYS, Hon. Sec.

GLASGOW WEST END C.B.C.

Usual monthly meeting held in Clarendon Hall on May 13th, Mr. A. Miller presiding over a fair attendance. The President made reference to the death of our late beloved Sovereign, who was a lover of all kinds of birds and a true fancier; and from the office-bearers and members of this club our sincere and respectful sympathy goes out to-day to Her Majesty Queen Alexandra, their Majesties the King and Queen, and all the other members of the Royal Family in their bereavement. The business was proceeded with. We were honoured by the presence of our Hon. President, Mr. Douglas Pearson, who is very enthusiastic in all that pertains to the Fancy, and was with us till the close of the meeting. A large amount of club business was got through in good time. Three new members were enrolled, viz., Messrs. Hart, Munro, and Davidson. A letter was read from Mr. F. Bowman, secretary pro tem., on "Proposed Open Association" for Glasgow. Our delegates' report of the meeting of the Association held on 19th April, was also received and discussed. The model of prize cards for annual members' show was also decided on. The various other items relating to the annual members' show was left for the committee to arrange and submit same at next monthly meeting. The prize cards and specials were then presented to each of the winners at last monthly show. A hearty vote of thanks to the Chairman and to our Hon. President brought the meeting to a close.—WM. PROUDFOOT, Sec. and Treas.

YORKSHIRE COUNTY B.B. & M.C

Annual Meeting.

Third annual meeting held in the Market Tavern, Bradford, on April 30, Mr. D. Duncan, junr., in the chair. The secretary read the balance sheet and gave a resume of the year's work. He pointed out that we had run the season at a loss of about 36s., but a few fanciers instantly put their hands "down" and reduced it by about 10s. As to the show season, we, as a society, had done very well indeed, as at the seven shows where our patronage was given, a grand total of 285 entries was received for British and Mule classes, or an average of over 40 per show. Another feature was that the society which gave the best classification received the better support pro rata. This was considered very gratifying. We then elected officers for the ensuing year. Mr. D. Duncan was again elected president, proposed by Mr. Inman and seconded by Mr. Isherwood. The secretary then stated that he wished to retire owing to pressure of business. This was accepted with regret, and Messrs. J. Lane and P. Jowett were elected provisionally, on Mr. Lane seeing his way to accept office. I have been notified since that Mr. Lane is willing to accept the position along with Mr. Jowett. Messrs. Inman, Cowgill, Isherwood, and Archer, were elected vice-presidents; and Messrs. L. Bean, T. Wood, C. Ross, W. R. Myers (Bradford District), J. Wilson (Malton), B. H. Wilson (Bramley), J. Nicholson (Skipton), J. Bescoby (Doncaster), H. Stake (Brighouse), J. Thomas (Otley), J. S. Clarkson (Halifax), Potter (Hull), J. Beattie (Scholes), Wilkinson (Yarm-on-Tees), J. Woods (Pickering), outside Bradford district committee. Messrs. R. Halliday and S. Dean were re-elected auditors. Mr. Duncan proposed and Mr. Taylor seconded, that the best thanks be given to secretary for his past services, etc. Mr. Myers suitably replied. The rules were revised, but these will be given fully through the Fancy Press by the newly-elected secretaries. It was also decided, if it could be arranged, to have a table show for members only at one of the first feather shows. Mr. Myers said he would see the Great Horton O.S. re this matter. I may say that I think it will be held in conjunction with their first feather show.—W. RILEY MYERS, late Hon. Sec.

SCOTCH FANCY CANARY NATIONAL DERBY O.A.

The following are the members who have joined this year up to the 16th May:—Airdrie, J. W. Wynnes and A. Russell; Blackhall, W. Thornton; Broughty Ferry, R. Carmyllie; Cambuslang, W. Jenkins; Clydebank, R. Prentice and J. Hay; Corkerhill, W. Montgomery; Cowdenbeath, J. Cook; Dalkeith, J. Carson; Dumfries, G. Byers; Dundee, W. Beattie; Duns, Miss Brown; Edinburgh, C. R. Drysdale, W. Finnie, J. McMillan, and A. Stavert; Glasgow, E. B. Bullions, J. Calder, A. Galston, W. Lees, J. McMahon, James Orr, John Orr, J. Shannon, and T. Smith; Govan, D. Black, J. Gaw, A. McLauchlan, J. Miller, and J. Smith; Greenock, R. Wright; Helensburgh, H. Crawford; Kirkmuirhill, T. Jackson and L. Jackson; Lesmahagow, J. Burnside; Leith, J. Dalgleish; Maxwelltown, J. Ramsay; Mossend, R. Douglas; Musselburgh, R. Johnstone; Oakley, J. Hogg; Paisley, W. Hart, W. McArthur, and J. Kennedy; Rutherglen, A. Lang; Shettleston, A. Buchannau; Thornton, A. Leslie; Wishaw, W. Gibb; and Yoker, W. Prentice. A large number of gentlemen have to account for the tickets sent them, and I take this liberty of reminding them that the membership closes on 31st May. The executive will take it as a favour if those who have to account for tickets will do so before that date, and thereby avoid not only labour, but save expense in postage stamps. We confidently hope that the Fancy will make the membership of this year the record. Long live the Scotch Fancy Canary.—THOMAS SMITH, Secretary.

The Shows.

EAST HAM F.S.

Second monthly show held at "The Earl of Wakefield" on May 9th. Mr. Hammons judged cage birds. YORKS: 1, 2, 3, vhc, Skinner. HARDBILL, BRIT.: (1): 1, spl. given by Mr. Blayton for best Goldfinch, Skinner; 2 (Linnet), Burton; 3, (Linnet) B. C. Smith; vhc (Bramble) Rutter; hc (Bullfinch), Culpeck; c (Linnet), Taylor; Nos. 34 and 35 empty, Arnett. Members please note that on May 23, 8 p.m., Mr. C. A. House will lecture on "Inbreeding."—H. RUTTER, Hon. Sec.

Singing Contests.

LEEDS.

Usual weekly quality Linnet contest held at Prince Albert Hotel, Cambridge-street, on May 15th, when 20 birds sang for three good prizes. Results: Butler 1st, Chippendale 2nd, Sellars 3rd. Judges, Messrs. Towers and Dean; timekeeper, F. Callaghan. —A. TURNER, Hon. Sec.

BLACKBURN.

Our All-England Whitsuntide contest took place at the Old Red Lion, Snig Brook, on May 14th, when 36 birds faced the judges. We had birds from Wigan, Atherton, Preston, Great Harwood; in fact, from places too numerous to mention. Result:—1st D. Bentley (Great Harwood), 2nd Barns (Wigan), 3rd Jones (Atherton), 4th Jobson (Blackburn), 5th Pickering (Preston), 6th W. B. Bentley (Great Harwood). Judges: Messrs. J. W. Barnes (Wigan) and R. Feuder; referee, Mr. E. Christopherson; timekeeper, Mr. T. Slater; birdkeeper, Mr. P. Blackshaw. —T. SLATER, Sec.

GLASSHOUGHTON.

We held an open Linnet sing at the Bath Inn, Wheldale Lane, on May 15th, when 14 birds were entered. 1, J. Higgins, 30 secs.; 2nd and 3rd shared between A. Longfield and W. Dobson, 25 secs. Also on May 16th, when we sang for the cup with 12 birds. W. Dobson was 1st, 43 secs.; 2nd, B. Nelson, 37 secs.; 3, B. Nelson, 31 secs.; 4, J. Higgins, 28 secs. There will be an open Linnet sing at the Britannia Inn, Lock Lane, on May 28th.—A. LONGFIELD, Sec.

RYHOPE.

Linnet singing contest held at Queen's Head, April 30th, when 51 birds faced the judge, and some good singing was heard. There were birds from all over the county, and strangers said they never saw a better conducted contest. Prizes: 1st £1, 2nd 7s. 6d., 3rd 2s. 6d., and 6d. entries. 1, 2, 3, Punten. Judge, Mr. R. Spencer; timekeeper, Mr. G. Miller; hookkeeper, Mr. J. Cope. At the Ship Inn, May 14; prizes: 1st £1, 2nd 7s. 6d., 3rd 2s. 6d.; entry fee 6d.; there were 33 entries. Mr. Spencer judged, and gave every satisfaction. Timekeeper, Mr. J. Jackson; bookkeeper, Mr. W. Day.—J. COPE.

CASTLEFORD.

Whitsuntide contest held at the Brittania Inn, Lock Lane; 33 birds sang for four good prizes and specials, there being the best attendance of the year. Result:—1, 2, Dobson; Caddy and Morley tied for 3rd prize, but they sang off and Caddy got 3rd and Morley 4th. Next sing at the Britannia Inn on May 21st. We hope all members will attend and bring friends.—WALTER DOBSON, Sec.

NELSON.

In connection with the Palatine Working Men's Club, Norfolk-street, Nelson, the 5th annual Lark singing contest was held on May 14th, when prizes to the value of £5 were competed for, which brought together 21 of the best singing birds heard for a good few years. There were birds from almost all parts of Lancashire, also some from Yorkshire. No fewer than 12 birds sang over 9 minutes and a half out of the allotted time, 10 minutes. 1, Airey (£2 10s.), 10min. full; 2, B. Sutcliffe (£1 5s.), 9min. 59sec.; 3, P. Pollard (12s.), 9min. 58sec.; 4, M. Brierley (8s.), 9min. 56sec.; 5, S. Bannister (5s.), 9min. 55sec.; also was good singing, 9.54, 9.49, 9.40, and 9.37. Judges, Messrs. J. T. Burnett and D. Greenwood.—J. LOFTHOUSE, Sec.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

THE MYSTERIES OF HYBRID BREEDING

Will all be found revealed in

"CAGE BIRD HYBRIDS."

The Coloured Plates are Magnificent.

Part 2 is now on Sale. Price 7d., post free.

Books for Bird Lovers.

Brief particulars of some of "Cage Birds" SPECIAL PUBLICATIONS for keepers of birds, with post free prices.

THE HYGIENE OF BIRD-KEEPING, 1/1.—By W. Geo. Creswell, M.D. Thoroughly treats of modern hygieue (the science of health) in bird-keepiug.

SEPTIC FEVER OR CANARY PLAGUE, 7d.—By R. H. Clarke, M.D. The only booklet published concerning this dread disease, which Dr. Clarke has given very special study.

THE NORWICH PLAINHEAD CANARY, 1½d.—By J. H. Payne. Pronounced by all experts to be a most valuable pamphlet concerning the breeding of the variety; written by one of our leading judges.

CANARY BREEDING FOR BEGINNERS, 7d.—By Claude St. John. A Practical, up-to-date guide to Canary breeding, designed specially for the use of the beginner. Deals very fully with the choice, sexing, and mating of the birds, feeding for condition, the cages and their fittings, the bird-room, egg-food, nest-building, rearing and moulting the young, colour-feeding, training for show, and all the difficulties likely to confront the breeder.

MEATING-OFF AND FEEDING SOFTBILLS, 6½d.—By John Frostick. No fancier of Insectivorous Birds who wishes to succeed in his hobby can afford to be witbout a copy. It also contains notes on Bird Trapping, Cages, etc.

SEEDS, FOODS, AND WILD PLANTS FOR CAGE BIRDS, 1/2. — By various leading authors. Full information on the seeds suitable for all cage birds, their food values, uses, etc., with descriptions and illustrations of the wild plants indispensable to the successful keeping of British and other birds.

HOUSE'S CANARY MANUAL, 1/2.—By C. A. House. A thorough, practical guide to the general management and breeding of Canaries, dealing fully with the breeding, etc., of every member of the Canary family, including the Roller (or Singing) Canary. An illustration of each bird, by the master Canary artist, Mr. H. Norman; exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge.

BUDGERIGARS AND COCKATEELS, 6d.—By C. P. Arthur. The breeding of Budgerigars and Cockateels is recognised as one of the most profitable and pleasure-giving sides of foreign bird-keeping. This eminent authority gives very full details upon how to keep, feed, breed, tame, and teach them to talk.

PET RABBITS, CAVIES, AND MICE, 1/1½.—By George Gardner. Full information on housing, feeding, breeding, exhibiting, and keeping for profit. A complete practical guide, with illustrations from photographs.

FOREIGN BIRDS FOR BEGINNERS, 1/1.—By W. T. Page, F.Z.S., etc., Foreign Bird Expert to "Cage Birds." A highly instructive Manual. It contains a magnificent coloured plate and a number of black and white illustrations. Indispensable to all keepers of Foreign Birds. Replete with useful hints.

BRITISH BIRD MANUAL, 2/3 (cloth bound).—By H. Norman; or may be had in two parts. Part 1: "Hardbills," and Part 2: "Softbills." Either Part, price 1/1, post free. Each part contains a beautiful and life-like coloured plate and numerous illustrations of birds and cages. Up-to-date information on the keeping of British Birds; full of extremely valuable hints.

COLOUR FEEDING OF CANARIES AND OTHER BIRDS, 3½d.—By J. W. Ramsden. Tells you how to mix the colour-food, and how to moult the birds to get the richest possible colour.

THE STOCK BOOK, 7d.—By G. E. Weston. Of our invaluable "Breeding Room Register" a well-known fancier has said:—"It makes bird breeding easy." No breeder of birds can possibly afford to be without it. It simplifies the operations in the bird-room and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred. Contains both Pedigree, Breeding, Young Bird, and Show Registers of simple and unique character, in addition to useful account pages, and many invaluable "Hints for Emergencies."

AVIARIES, BIRD-ROOMS, AND CAGES, 2/3 (cloth gilt).—By H. Norman. Contains ten lovely full-page photographic plates. A practical guide which deals thoroughly with the proper Building, Fitting, and Management of Aviaries and Bird-rooms, and the making of Cages.

YORKSHIRE CANARIES, 1/1½.—By H. W. Battye (Past President of the Yorkshire Union). Absolutely the very best Handbook dealing with the Yorkshire and its sub-varieties. Contains complete instructions upon Pairing, Breeding, Moulting, and successful Exhibiting, also how to treat in both health and disease.

NORWICH CANARIES, 1/1.—By C. A. House. Tells the fancier all that he needs to know to enable him to become successful as a breeder, and exhibitor of the Norwich Plainhead. The chapters on "Forming a Stud," and "How to Produce the Ideal" are worth the cost of the whole book many times over.

BIRDS OF THE COUNTRYSIDE, 5/4.—By Frank Finn, B.A., F.Z.S. A handbook to the wild life of all our familiar British birds; their appearance and habits accurately described. With 12 beautiful coloured plates, and 118 photographic illustrations. A charming gift book.

PETS, AND HOW TO KEEP THEM, 5/4.—By Frank Finn, B.A., F.Z.S. Gives the correct method of housing, feeding, and managing every kind of pet; all sorts of animals are dealt with—monkeys, dogs, cats, lizards, tortoises, also gold and other fancy fish, while there is a large section devoted to birds. Contains many coloured plates and illustrations from photographs. Another charming gift book.

FANCIERS' PRINTING.—Fanciers requiring business notepaper, postcards, trade envelopes, etc., should write us for a quotation. We are now in a position to supply these at specially low rates combined with first-class work. Artistic memos., with block of any desired bird, and fancier's name, address, and 12 words of description, 250 2/-, 500 2/6, carriage paid.

SEND YOUR ORDERS AT ONCE, ACCOMPANIED BY A POSTAL ORDER TO.

The Manager, "Cage Birds."

CAGE BIRDS, 154, FLEET STREET, LONDON.

ST. IVES, CORNWALL

ROYAL CORNWALL AGRICULTURAL ASSOCIATION. EXHIBITION, **Wednesday and Thursday, 8th and 9th June, 1910,** of Dogs, Poultry, Pigeons, **Cage Birds,** Rabbits, Cats, Cavies, Mice and Horticulture. Over £300 in Prizes, also a large number of Valuable Special Prizes. Entries close **May 27th, 1910.** Entry forms can be obtained of Hon. Sec. **W. A. Sandrey, 4, Draycot Terrace, St. Ives.**

A Note on the Dipper.

The Water Ousel is a very early breeder, fully-fledged young being frequently found in March. It rears several broods during the season, the same nest being often used two or three times in succession.

Japanese Artists and Birds.

The Japanese are far in advance of western nations in the art of decoration, and for this purpose birds and flowers appeal more to them than anything else in nature. Some of their studies of bird life are really splendid. Their artists have the happy knack of catching the subject in a natural position.

An Independent Species.

The tiny Wren is one of the most independent species we have. He is seldom seen in company, excepting just at the breeding season. He is a hard worker and seems to be for ever on the hunt, sometimes along the hedgerow, round the wood pile or outhouses, and often along the margin of streams, especially where a few bushes grow to the water's edge, for in such places insect life is to be found at all times of the year

Cage Birds

Twitterings.

Kindly notify that I have removed to 193, Palmerston Street, Manchester. Will secretaries of societies please note?—J. SPENCER.

The show of the Ashford (Kent) F.S. will be held on October 20th, when the Cage Bird section will be judged by Mr. C. A. House.

Will friends and fanciers kindly note that I have removed to 599, Duke Street, Glasgow, writes Mr. J. Brown, secretary of the Scottish Plainhead Club.

The lecture on the "Origin of the Yorkshire Canary," advertised for our last meeting, was postponed, owing to the lecturer being indisposed, writes Mr. F. Mitchell, hon. secretary, Brighouse and Dis. C.B.S.

The Glasgow Southern (Confined) O.A. have had important additions to the membership roll, writes "Scotch Fancier," several very worthy breeders of the Scotch Fancy Canary having become members.

Please convey my thanks to Mr. Yates (writes "Novice") for the splendid article on "Diphtheria in Birds," which appeared in CAGE BIRDS as a reply to the letter which I sent up to your journal.

We have received from Mr. J. W. Ramsden samples of the exceptionally fine peppers he is putting before the Fancy for the 1910 season, and shall have something further to say next week concerning these colour-foods.

The North London C.B.A. are holding a young stock show on June 25, at the Library Hall, Church Street, Stoke Newington. Tickets and particulars may be had of Mr. R. P. Harper, the sec., 26, Brighton Road, Stoke Newington, London, N.

Winning numbers of the late Harry Brown's sale:—312, 587, 572, 311, 638, 637, 249, 318, 265, 990, 660, 125, 818, 739, 1,060, 799, 422, 319, 834, 899, 920, 7, 700, 85, 315, 711, 441, 67, 686.—PETER PETTIGREW, 76, Hospital Street, Glasgow.—(ADVT.).

A smoking concert is to be held for the benefit of Mr. W. Bradly, of Chatham, who, through a long illness is unable to follow his employment. The event takes place on July 4th, at the Ropemakers' Arms, New Road, Chatham, and it is hoped all the tickets (threepence each) will be disposed of and a good attendance assured.

We regret exceedingly to hear of the serious illness of the only daughter of Mr. F. Armstrong, and the many friends of the popular secretary of the National Green-Marked Yorkshire C.C. will join us in wishing her a speedy restoration to health. Miss Armstrong is a keen bird-lover and a great help in her father's bird-room.

Three First Feather shows have been arranged for by the Shipley O.S. to be held at the Prince of Wales Hotel, Saltaire Road, Shipley (the society's headquarters), on June 4th, July 2nd, and August 6th; and three Old Bird shows on November 1st, December 6th, and January 17th, 1911. A list containing the classifications and other particulars may be had of the secretary, Mr. H. Martin, 11, Marlborough Road, Shipley.

The Leyton and Dis. C.B.A. extend a hearty welcome to all fanciers who would care to accompany them on their ramble through Epping Forest with Mr. J. S. Clarke as guide on Saturday, May 28th, write Messrs. Forse and Son, the hon. secretaries. The party will assemble at Loughton station between 1 and 2 o'clock, and a start will be made directly after the arrival of the train timed for 2.1 at Loughton. The ramble will finish up at the "Owl," where a substantial meat tea will be provided.

Ramsden's Pure Peppers are unrivalled for colour, purity, and quality. The pick of the harvest has been secured at enormous expense. No other peppers on the market to compare with Ramsden's. Used last season with the greatest success by Messrs. Gill, Dr. Sheldon, Hopkins, Adnitt and Driver, Irons, Helliwell, Shackleton, Rennie, Halliday, Robertshaw, Wilcock, Amblers, Hartley, Thornton, Bailey, Crabtree, Towers, Ogden, Robertshaw, Armstrong, Crisp, Rinkin, Dewsnap, Hampshire, Arrighi, Colton, Lamb, Mrs. Askham, Bond, Coffey, Gilbert, Maxwell, Weston, Mundell, Robson, Dewar, Bexson, and hundreds of other noted fanciers, judges, etc. If proof of above is needed, refer to Palace Show catalogue. Over 250 awards at the Palace Show to birds moulted solely on Ramsden's Pure Peppers. Use no other, and when you ask for Ramsden's Peppers, see you get them. Don't be put off with inferior peppers, just to put extra profit into a shopkeeper's pocket. Ramsden's special prizes are worth winning. Any society can have one on same terms and conditions as last season. Sample of pepper sent on receipt of penny stamp only.—J. Ramsden, 11, Josephine Avenue, Brixton, London.—(ADVT.)

May I thank you for your kindly interest in the Dulwich and Peckham C.B.S., by giving us the splendid report of my concert, writes Mr. H. W. Tomsett (Brockley). You will be interested to know it was quite a success financially, the room being crowded out. May I thank also those sterling fanciers who, not being members, patronised us and spent an enjoyable evening. The receipts amounted to over £5.

At our monthly meeting held on May 7th, writes Mr. J. A. Turnbull, hon. secretary, Headgate and Dis. C.B.S., it was decided to hold a young stock show on July 9th, Mr. Geo. Barkas (High Westwood) to judge. For our annual show on January 7th, Mr. R. S. Bewick (Newfield) was elected to judge. I regret to state we are having a poor breeding season so far, fanciers complaining of the cold and frosty nights.

I think one of the most interested parties in our paper, CAGE BIRDS, is a friend of mine, Mr. Waddington, hairdresser, 144, Barkerend Road, Bradford, at whose shop, writes Mr. John H. Jowett (Bradford), the paper can be taken up and read any day in the week, and he has always 3 to 4 of the coloured plates posted up in full view. Mr. Waddington is trying his patience with a few pairs of Canaries in his shop (not a very favourable place), but he is deserving of luck and also every assistance, and I shall endeavour to furnish him before long with a change of stock to encourage him in the Fancy.

The annual country ramble of the Dulwich and Peckham C.B.S., writes Mr. W. Hodson, the hon. secretary, has been arranged to take place on Sunday, May 29th, to Dorking. The train leaves Peckham Rye, London and Brighton station, at 9.10 a.m. Members and friends joining the party are asked to take their own ticket, which is 2s. 3d. return. Luncheon will be provided at the Three Tuns Hotel, Dorking, at 2s. 6d. each. I shall be pleased to hear, not later than May 26th, from any members or friends who intend going, as it will be necessary to let them know at the hotel the number for which to provide luncheon.

The "Preston & Flowers Fund."

We have received contributions of 5s. 6d. from the Clackmannanshire C.B.S., and 1s. from "Cock Robin," which bring the aggregate amount received in subscriptions up to £63 2s. 5d.

The "A.C. Dandie Testimonial."

Will all those having subscription sheets re the above please return same to me on or before May 26th, and will anyone willing to subscribe kindly send their mite to me and oblige, writes Mr. A. W. Watson, secretary, Scottish National C.B.S., 58, Colinton Road, Edinburgh.

Northern B. B. M. and F.B.C.

Will societies desirous of having the patronage of the above club make applications stating classification, etc., judge (radius, Northumberland, Durham, Cumberland, and Westmoreland)? Will also anyone desirous of becoming a member (sub. 2s. 6d.) please communicate with me—J. Bertram, 95, Gainsbro' Grove, Newcastle?

A Marriage at Newcastle.

On Wednesday, May 11th, the marriage took place of Mr. Wm. Farnborough, of Clapham Common, London, and Emily, the youngest daughter of Mr. James Shepherd, bird specialist, Stanhope Street, Newcastle, and late of Liverpool. Mr. Shepherd is vice-chairman of the Newcastle C.B.S. and of the Northern Yorkshire C.C.

Moving Day.

Owing to the making of a new road at Stoat's Nest (Surrey) recently it was found necessary to remove a ten feet high yew tree in which was a Thrush's nest containing a brood of young only a few days old. By careful handling tree, nest and fledgings were conveyed (according to a daily contemporary) without harm a distance of thirty-five feet, when the yew was replanted, the old bird actually sitting on the nest while the men carried the tree.

Midland Counties Y.C.C. Patronage.

The Midland Counties Y.C.C. invites applications for its patronage from societies within its radius, and the secretary takes the opportunity of pointing out that the clubs receiving the patronage last year had a most successful and paying section, and one which was, generally speaking, the feature of the different exhibitions. The committee will probably proceed to allot its patronage at the next committee meeting.—A. PADDOCK, hon. secretary, All Saints Road, Kings Heath.

THE POULTRY WORLD.

The up-to-date, efficient poultry journal. Every number grandly illustrated and full of practical articles by experts. Invaluable for the beginner and the amateur.

A Seeker After Light.

A Starling's nest has been built, it is stated, in one of the electric arc lamps on the Promenade at North Shore, Blackpool.

A Cream-coloured Sparrow.

A cream-coloured Sparrow, with a white tail, has frequently been seen of late near the villas at Peveril Point, Swanage, we understand.

Our Predominant Songster.

When John Burroughs was in England, the bird that impressed him most of our woodland songsters was the Chaffinch. He said, "Two-thirds of the music that ordinarily greets the ear comes from the Chaffinch." As a songster, this bird is very persistent, and where abundant his song would force itself upon the ear, for there is a rattle and a dash about it which compel one to listen.

Burns and the Skylark.

The Skylark is perhaps the most popular of all our song birds. He is known to everybody. In some parts of Scotland he is called the Laverock. The national poet sings his praises, and in a strain that clearly says the bird sings for everybody:

"The Laverock shuns the palace gay,
And o'er the cottage sings:
For nature smiles as sweet, I ween,
To shepherds as to kings."

She Had Her Way.

The story of a bird's persistency comes from the village of Ragnall, near Retford. The postman, in clearing the pillar-box, found that a Blue Tit had commenced to build a nest in the box. He promptly threw the latter out, but on clearing the box the next day he found the bird had commenced building again. The postman again threw it out, and this was carried on for eight or nine days. Eventually the postman began to respect the bird's persistency and perseverance, with the result that she was allowed to build her nest in peace, and this week it contained three eggs.

The White Wagtail at Home.

By W. E. TESCHEMAKER, B.A.

(*Concluded from page 410.*)

We have found that winged insects are the natural food of both the Pied Wagtail and its white relative, but (and this is the point), we have also found that when flies fail the former will do well on other fare, but the latter will not. Now, if we have a look at the breeding area of the White Wagtail on a map, we shall at once notice that it is practically restricted, at this time of the year, to the mosquito countries, and Great Britain, as we know, is practically exempt from this pest. We can judge of the quantity of mosquitoes in the extreme north of Europe from a remark in one of Seebohms' books to the effect that he found it impossible to shoot sometimes in parts of Siberia because the air was so thick with winged insects that he could hardly see the gunsights. Our guess therefore is that the White Wagtail requires a diet of flies, especially in the breeding season, and that it cannot find sufficient in our country.

When we come to think of it, what an infinite variety of flies this Wagtail must come across in its yearly journey from—shall we say?—Iceland to Upper Egypt! Although it knows nothing about Latin names, we may be sure that it classifies them in its own mind, and that it could tell us—what no entomologist could tell us—exactly what each variety tastes like. No wonder, as we have noted above, it does not swallow the first fly that comes along, but carefully examines each one first from an entomological point of view.

Let me suggest, in conclusion, that any of our readers who live near our Southern and Western coasts should keep a watchful eye on any Pied Wagtails that may be breeding in their neighbourhood, and note if any of their partners have light-grey backs. Although the crossing of these two species has been usually considered a rare ornithological event, I am convinced that it frequently occurs. I have noted two cases in Devonshire in the last few years, and I think we can easily understand how it happens. The males, as with other migratory species, arrive here before the females; they find unmated females of the closely related Pied Wagtail; they "pop the question," and, having once plighted their troth, they do not desert their fiancees when the females of their own species turn up.

Of one thing I feel almost sure, namely, that should our readers be fortunate enough to come across a White Wagtail in the breeding season, they will agree with me that they have seen the most artistically beautiful of all British birds, with the possible exception of an adult male Yellow Wagtail!

SHOW DATES FIXED.

To secure insertion in this column, a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.

SOME BREEDING RESULTS OF THE 1910 SEASON.

Notes on the results of the present breeding season, or of any interesting happenings, are invited from the secretaries of societies and others, and must be accompanied by the sender's name and address in every case.

A few results of breeders I visited in Bradford here. One is running 9 hens, with a total of 15 young thrown out, the hens failing to feed them entirely—only 8 on the hop with ma. Another: 5 hens, 10 bright eggs, 6 young on the hop and dry seed. Another friend lost about 4 nests entirely, and 12 successfully on the march about. Myself: 8 hens, 17 bright eggs to the basket, 13 young ones on the seed. These, the first rounds, are not anything to boast about. I wish Halley's comet would hasten through space.—JOHN JOWETT (Bradford).

I am a novice, and this is my first year of bird breeding. I have seven pairs and 44 young ones from them. The first were hatched on March 6th, and 32 are in a large aviary. I expect another 15 off next week. I think this is very good. I always take the eggs away till the fourth day; and I take the young birds away when they are three weeks old, and in two days they are feeding well. I might say that I find a lump of white wool or wadding, tied in a ball, is a good thing to prevent the hens from plucking their young ones.—T. CLARK (Gt. Yarmouth).

Glasgow Notes.

The Glasgow fanciers have had bad luck so far as the breeding season has gone. The common experience has been hens not laying and unfertile eggs, no doubt due to the cold weather which has prevailed in April and May. Mr. Black, the president of the City of Glasgow Ornithological Association, had 15 young Scotch Fancy Canaries some time ago from his best pairs. He is a most enthusiastic fancier, and we are pleased to hear of his success. Border Fancy breeders are doing well in the hatching and rearing. This class has more vitality than the higher class of Canaries. Norwich breeders have had their difficulties arising from unfertile eggs, and young not thriving owing to the cold weather. Hybrid breeding is just commencing, and should the genial weather which has set in continue, breeding operations should be a decided success, as May, June, and July are the best months of the year for successful hatching and rearing.—"SCOTCH FANCIER."

Pentre and District C.B.S.

A meeting of the above named Pentre society was held last Saturday, May 14, and it was proposed that the society be called as above, and that the meetings be held at the Queen's Hotel, Pentre, every Saturday until further notice. Any fancier wishing to join will be welcomed, and the fee is 1s. entrance and 1s. per quarter. It has also been proposed that we hold a table show for British birds in about a month's time. Anyone wishing further information please apply to the secretary pro tem.

W. THOMAS, Sec. pro tem., 24, Llewellyn Street, Pentre, Rhondda.

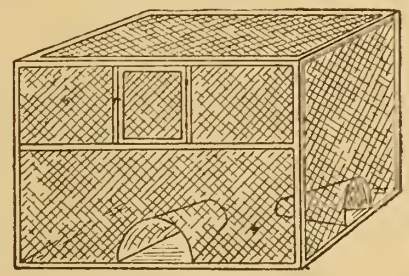
The Stock Book.

Our Invaluable "Breeding Room Register." By G. E. Weston.

Post free, 7d.

A well-known fancier has said of it:—"It makes bird breeding easy." This book no breeder of birds can possibly afford to be without. It simplifies the operations in the bird-room, and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred—keep account of their strong and weak points. It contains both Pedigree, Breeding, Young Bird, and Show Registers of simple and unique character, in addition to useful account pages, and many invaluable "Hints for Emergencies."

Send your Postal Order to CAGE BIRDS, 154, Fleet Street, London, E.C



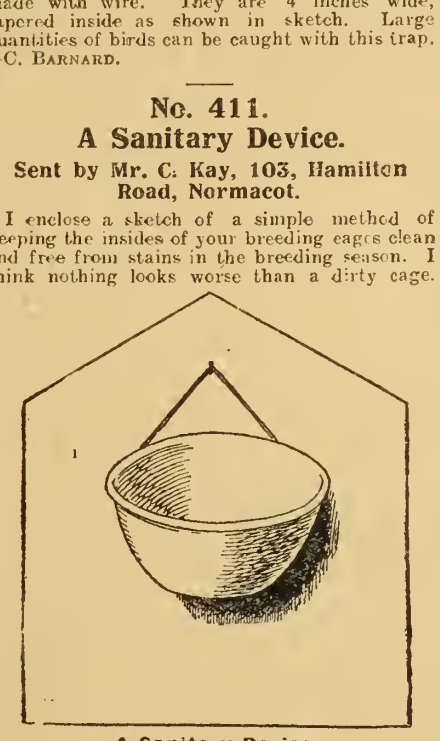
Illustrated Ideas

Every "Illustrated Idea" used will entitle the sender thereof to two shillings and sixpence.

No. 410.
An Easily-made Bird-trap.

Sent by Mr. C. Barnard, near Post Office, Boreham, near Chelmsford.

Enclosed is a sketch of a very easily made bird trap. It is just a frame (2ft. square 1ft. 6ins. high), covered with ½in. wire netting. A door can be made in top or side (to suit one's



A Bird Trap.

pocket). The holes where the birds go in are made with wire. They are 4 inches wide, tapered inside as shown in sketch. Large quantities of birds can be caught with this trap. —C. BARNARD.

No. 411.
A Sanitary Device.

Sent by Mr. C. Kay, 103, Hamilton Road, Normacot.

I enclose a sketch of a simple method of keeping the insides of your breeding cages clean and free from stains in the breeding season. I think nothing looks worse than a dirty cage.

A Sanitary Device.

Get a piece of white cardboard, say, about 8ins. square; make a small hole about half an inch from the top, and then hook the cardboard on to the nail. Then hook your nest pan over it, and you will find your cages at the end of the breeding season quite clean. A piece of clean cardboard is required for each nest.—CHARLES KAY.

The Young Naturalist.

Prizes of 1s. and two of 6d. each will be given weekly for the best three anecdotes about birds written on postcards. Competitors must be under sixteen years of age, and state whence stories are taken. Two stars indicate the Winning Contribution; one star the runners up.

*The Long-tailed Tit.

My name, if you'd know it, is Long-tailed Tit,
To tree after tree see me cheerily flit;
Though the roughest of breezes the branches may swing,
Head upwards, head downwards, securely I cling.

Into crevice and crack see me carefully pry
For the tiniest grub or scarce visible fly;
Each pest of your orchard to me's a tit-bit,
So welcome the coming of Long-tailed Tit.

What a workman I am, yet how few are my tools!
Come, fetch out your hammer, nails, chisels, and rules,
You great clumsy man; yet, t'will puzzle your wits
To build you a home like the Long-tailed Tit's.

Taken from the "Sunbeams" by D. Jempson (age 13), Soggs Cottage, Ewhurst, Hawkhurst, Sussex.

**A Blue-Tit Story.

A bird lover has told a true story of how a pet Blue Tit sought refuge in his house during a period of exceptionally stormy weather. It grew very tame, and was placed in the Canary's cage during the night and part of the day to their mutual enjoyment. It is amusing to hear how the Tit, who was of a far more restless nature than its companion, would punish the Canary for pecking it. He would wait for a convenient moment, and then jump on the Canary's head and slide down its back, and it did this ever so many times in succession almost before the Canary realised what was happening. The Tit was never happier than when foraging for itself. It tried everything, even down to a bar of soap, accepting or rejecting, as guided by its taste. The soap was not acceptable, of course.—Sent by E. Tilley, 84, Station Road, Gorsty Hill, near Halesowen.

*A "Homing" Canary.

My daddy once had a Canary. One day he hung the cage in the garden, and somehow the door opened and the Canary got out and flew into some trees. We tried all we could to catch it, but could not. At last it flew over the house, and we thought it was lost. In the evening we went for a walk, and when we got home it was dark. My daddy went into the garden to bring the cage in, and there was our Canary inside, with his head under his wing fast asleep.—Sent by Ethel Bond (age 10), 82, High Street Eastleigh, Hants.

CLUB & SOCIETY NOTICES

One notice of any forthcoming Society meeting inserted free. It should reach us not later than Tuesday morning's post. Specially printed Club Notice Postcards may be had free on application to our Manager. Secretaries should always use them.

Ardwick C.B.S.—May 24, Onward Hall, 8. F.F. show business.—J. Spencer.
Bonnyrigg C.B.S.—May 28, Foresters Arms, 7.30. Last meeting for joining.—G. Harper.
Brighouse C.B.S.—May 24, Wellington Inn, 8. Mr. T. Bentley (Cleckheaton) will give a paper on breeding and rearing Yorkshires.—F. Mitchell.
Barrington and Choppington S.C.—May 21, Headquarters, 7. Nest feather show business.—W. Woollett.
City of Bradford O.S.—May 21, Flying Dutchman Hotel, 8. Impromptu question night; fanciers and friends specially invited.—F. Rhodes.
Coventry Godiva C.B.S.—May 23, Chequers Hotel, 8.30. Discussion on a summer outing.—W. H. Bray.
Crewe O.S.—May 24, Earl of Chester Hotel, 7.45.—Young stock and open shows, etc.—T. L. Hancocks.
Dalziel O.A.—May 21, Y.M.C.I., Brandon Street, Motherwell, 7. Election of judges.—J. Mathieson.
Eccleshill C.B.A.—May 21, White Hart Inn, Eccleshill, 8. Special meeting to discuss change of headquarters.—W. Nettleton.
Ferryhill C.B.S.—May 23, Red Lion Hotel, 7.30. Special meeting re classes for open show, etc.—R. Binks, jun.
Great Horton Good Intent O.S.—May 28, Church Schools, Southfield Lane, 7.30. Schedule for open show, Union, etc., business, and specials for F.F. show.—H. Chubb.
Green C.A.—May 26, Oldham Hall, Liverpool, 8. Special summons meeting to decide whether the Green Borders shall be taken in; also judge and schedule for young show.—G. Green.
Houghton-le-Spring C.B.S.—May 21, White Lion Hotel, 7.30. Selection of judge, etc., connected with Nest Feather show; all wishing to become members must do so at this meeting.—R. H. Dixon.
Heywood C.S.—May 24, Rechabite Hall, Pine Street, 7.30. F.F. show business.—A. H. Meadowcroft.
Highgate, Hampstead, and Dis.—May 26, Spencer Hall. British Bird Show. Open free at 8.30. Fanciers welcome.—C. W. Law.
Leicester C.B.S.—May 25, Saracen's Head Hotel, Market Place, 8.15. "Green Food: its uses and abuses," by Mr. J. Heighton; fanciers are invited, specimens can be brought for discussion.—J. A. Tyler.

Questions and Answers.

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following Conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaints written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence, otherwise their letters will not receive attention. All the fees received from this source will be handed over in full to the "Referee's" Poor Children's Dinner Fund (London).*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Canaries.—**Claude St. John.** British Birds, Mules and Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c., Park and Lake Aviculture—**Frank Finn,** B.A., F.Z.S. M.B.O.U., &c. Wild Bird Life—**H. Norman.**

NOTE.—If an answer is required concerning the proper mating, etc. of Norwich, Yorkshires, Crests, Cinnamons, Greens, Borders, Lizards, Scotch or any other variety of the Canary family, we shall, should the querist desire us to do so, be pleased to submit his question for answer to some leading specialist of the day on the variety concerned.

CANARY QUERIES.

Answered by CLAUDE ST. JOHN.

Sitting without Laying.

Crested.—She is probably waiting for the spring, which seems very reluctant to come, unless, indeed, this pleasant mood of the weather clerk is it. There are many such cases about this year up to the present, and the weather is doubtless mainly responsible for them. If the hen has not shown any signs of starting when this appears take away the cock for a week or ten days, remove nest box and materials. Give hen ten drops of syrup of buckthorn in the water for two days, and after that six drops of tincture of calumba and three of tincture of steel daily for four days. Feed on plain canary seed only as staple. Give separately half a teaspoonful of summer rape every second day, and on the alternate days a piece of bread and milk the size of a hazel nut sprinkled with soft sugar, and give also on these days a small pinch of a mixture of equal parts black rape, sesame, and gold of pleasure seeds. Give two leaves of dandelion daily. If the cock is not in full vigour and song treat him simultaneously on same lines, and at the end of the time named mate them again if in good condition for mating, and hope for better luck next time.

Greenhouse Aviary and Herbs.

Beginner.—You omit to say whether you contemplate growing plants as well as breeding birds. If you do it will but add to your chances of failure, which are already great. However, if the structure is well shaded from the sun during the greater part of the middle part of each day, and get a few hours morning and evening, you may do tolerably well for the breeding season, but will probably be compelled to move the birds to another place for moulting and to keep over the winter. You should see there is ample top ventilation, in the shape of movable lights, which must be protected by half-inch mesh netting, and must also start with hardy birds, which have been accustomed to this kind of life. You would do best to keep the breeding birds in cages, and you might wire off one end of the greenhouse to serve as a large flight for the young. The presence of the latter would not affect the old birds. Altogether these structures cannot be called really suitable places for aviaries. (2) Shepherd's purse is a common weed. It is not easy to describe it so that one is sure of recognising it except by the seed stalk, which is usually less than a foot high, slender, and has flat, almost heart-shaped, seed pods, with the point towards the stalk, scattered all around the stalk for a few inches in length at the top, and the tip of stalk usually still bearing minute white flowers. You could easily recognise it from the illustration shown in "Seeds, Foods, and Wild Plants for Cage Birds," which our manager would send you for 1s. 2d., post free.

Both in Trouble.

Kit.—(1)The hen has probably completed her clutch, and is sitting by this time. It is not rare for a hen to skip a day when laying, as she has evidently done. Do not interfere with the apparently painful leg. You might offer her a bath for a day or two if the symptoms have not quite disappeared, as they would probably do as soon as she had completed her clutch of eggs. (2) You should certainly have separated the cock from the hen as soon as she commenced to sit, as you will be able to treat him for the wheeziness far more successfully. If you did not do so separate him at once, but keep an eye upon the hen for an hour or two afterwards to see if she comes off the nest "bent on striking." If she does there will be nothing for it but to return him, and treat both alike, and trust to luck. If possible, when you move him put him right out of sight and hearing of the hen. See that he is quite free from draughts and chills, but at same time keep him in a pure and fresh atmosphere, and not near or over burning lights in the evenings. In addition to the usual seed diet give the prepared sponge cake as before every second day, a spray of chickweed daily, and in the drinking water give a pinch of Epsom salts and ten drops of lemon juice daily for three days, and afterwards twenty drops of whiskey, six each of oxymel of squills and paragoric, and two of eucalyptus oil, well shaken together, two days in every three for a week, and every second day for another week afterwards.

Is it a Singing Hen?

More Knowledge.—No, I do not expect the hen is a singing hen, and, if she is, that is no reason for her not breeding. Any hen worthy the name is often calling out now, but there is a great gulf between this calling and the performances of a singing hen. I fancy the real cause of your trouble is that the birds, especially the cock, are not in breeding condition. The cock should be in full song, although this is not absolutely essential. If they still show no signs of nesting when this appears separate them for a fortnight. Give a pinch of Epsom salts and ten drops of lemon juice in the drinking water for two days. After that give six drops of tincture of gentian and three of tincture of steel in the water every second day for a week. Feed on a staple of plain canary seed only. Every second day give separately to each half a teaspoonful of summer rape and a small pinch of a mixture of equal parts inga, millet, linseed, gold of pleasure, and sesame seed. On the alternate days give a small piece of bread and milk sprinkled with soft sugar, and two leaves of dandelion each. Keep cages strewn with clean gritty sand, and see they are free from red mites, and out of draughts. At the end of the fortnight if birds seem in good condition put them together and try again.

Disappointment Writ Large.

Know Nothing.—It requires some pluck to listen to the rosy tales of your friend's great successes, when you are having such terribly hard luck. But you know, as a jovial soul once wrote, there's a deal of human natur' in man, and it is just possible your friends are only trying to console your loss by a spicy account of their own ripping success. Pay no heed to it. You may at least rest assured that you do not stand alone in miserable luck, so far. As you surmise, the weather has something to do with it, and I think perhaps your birds are trifle overfed, in addition. All that have just finished sitting, or are not about wanting to start again immediately, separate for a fortnight. For one week feed on plain canary seed only, with a liberal supply of green food. In the drinking water give twelve drops of syrup of buckthorn daily for three days, and after that give six drops of tincture of gentian and three of aromatic sulphuric acid every second day for a week. In the second week feed and treat the same as advised to "More Knowledge," and then you may mate up again and try your luck for a last round.

Canary Querists should send to our publisher for "Canary Breeding for Beginners," 7d.; "House's Canary Manual," 1/2; and "Yorkshire Canaries," 1/-, post free.

Brevities.

Two-point Cinnamon (M. H. B.).—(1) Yes, it is quite possible for a buff pink-eyed cock to produce cinnamon-marked young cocks. (2) You make no mention of any marking on the pink-eyed cock in question, so I am surmising that it is a clear. In this case you should mate it with a cinnamon ticked yellow hen to produce the desired young.

Swelling on Neck (Mrs. M. Purser).—I should have been in a better position to help had you described the swelling fully, and also said how you feed and treat the bird. I rather suspect some physical injury may be the cause. Try the following treatment for a fortnight, and if not better then write again and give full particulars. Staple diet plain canary seed only. Every second day a half-teaspoonful of summer rape and a spray of chickweed. On the alternate days give a piece of bread and milk the size of a hazel nut, with two drops of cod liver oil emulsion on it, and sprinkled with soft sugar. In the drinking water give as much Epsom salts as will cover a sixpence and ten drops of lemon juice every second day for a week, and during the next week six drops of tincture of gentian and four of aromatic sulphuric acid every second day. If the swelling has not dispersed paint it every second day in the first week with a feather dipped in colourless tincture of iodine.

Singing Hen and Erratic Laying (Postman).—You will probably do no good at all with this hen—not solely on account of her being a singer, but because, I fear, she is a "wrong 'un." Try what two or three weeks of the following treatment will do for her: Separate her, and remove nest box and material. Feed on a staple of plain canary seed only. Every second day give half a teaspoonful of summer rape and a spray of freshgathered chickweed, and on the alternate days about the same quantity of a mixture of equal parts black rape, teazle, linseed, and white millet, and a piece of bread and milk the size of a hazel nut sprinkled with soft sugar. In the drinking water give a crystal of sulphate of soda the size of a split pea every second day for a week, and in the second week give six drops of tincture of gentian and four of aromatic sulphuric acid every second day. At the end of a fortnight return to the usual dietary, and try mating her again as soon as she is ready for mating.

Three-cornered (N. U. H. P.).—(1) It is quite possible for an egg laid the day after the cock is introduced, especially if the introduction is in the early part of the day, to be fertile. If birds are in good health and proper condition eggs laid from thirty to forty hours after cock is introduced may reasonably be expected to be fertile. (2) Send your Mule query again on a separate sheet, and do not omit to mention what sort of Mule it is, as you do this time. This question has to go to another authority. (3) See reply to "Homer" on Feeding Rollers in last issue, which will tell you all you wish to know on this point.

Not Laying (F. F., Bindoff).—Separate them for a fortnight. In the first-week limit the diet to plain canary and a fairly liberal supply of chickweed. In the drinking water give twelve drops of syrup of buckthorn for two days. In the second week feed and treat as advised to "More Knowledge," giving her also the gentian and steel as there advised every second day. Give her a mealworm a day if available, and stick a cube of hard common salt in the wires for her to peck at. If she is quite well and active, you may try her again at the end of this time, but otherwise it is useless wasting time with her.

Young and Old (F. H. B.).—Am not quite clear whether you require to know anything about the young which have died. If you are in any doubt you had better look up the last few issues, wherein you will find a number of detailed replies on the question of young dying. If you refer to a single-compartment cage in your query as to running two hens with one cock I say decidedly, No. It will not be a success. You must keep the hens in separate cages, or you might keep one in each side of a double breeding cage with the slide separating them. Then mate the cock first with one hen, and after she has gone to nest, and commenced sitting, remove him, and mate with the other. When the second hen has gone to nest remove him, and keep in a cage by himself until the first hen is ready for the second round. If both hens are in equally high breeding condition, and the cock young and lusty, you might run him through the slide at midday, thus allowing him to run with each for half a day at a time, which will suffice to ensure fertility.

Laying One Egg (Erratic Laying).—You give no idea how old the hen is. If hatched last year she may be worth the keeping until next season, but if she is getting old. I would advise you to discard her without more ado. You will probably never do any good with her. To give her a good chance of proving her worth, separate her as soon as the fate of this sitting is determined, and for a fortnight put her on the treatment given to "Postman," but instead of giving the gentian, substitute the same quantity of tincture of calumba. In all other respects follow the treatment named.

Loss of Appetite and Bareness (M. A. P.).—The hens are so-called non-feeders. If they have gone to nest again, when the young are about to hatch give a pinch of Epsom salts in the water for one day, and for a day or two after give her a bath in which you have dissolved a small teaspoonful of common salt. Remove the cock when she begins to sit, and leave her to hatch and rear the young herself. Read reply to "Homer" in last issue, and see if you go wrong in the feeding. You might hand-rear the young, providing the hen will keep them warm by moistening a little of the usual egg food until about the consistency of cream, and giving the young a feed every two hours for the first few days, increasing the frequency, and also making the food a little more solid, after the first week. You do not mention the age of the cock; if an old bird, the feathers will probably not be reproduced; otherwise, by encouraging a good and speedy moult, they will probably be placed all right. You can do nothing for them now.

Under Suspicion (Lilac).—I will not suggest the eggs were there all the time; I do not think they were. Certainly I would not hesitate to suggest what I honestly believed to be the true state of affairs. In this case I think an egg was laid on the Saturday morning after you had looked and found one still there, and another on the Sunday morning, and the interval between the first egg being laid and this Saturday morning in question had been drawn blank, so far as eggs were concerned. So you see the cock is not such a culprit as you thought. You make no mention of returning him at any part of the day after the first removal, and if this is the real state of affairs it is doubtful whether the eggs will be fertile, but let them sit the full time, and be on the safe side. If you are still doubtful of the cock it will be the most practical thing to remove him each night when an egg is expected, and not return him until the egg has been secured next morning, and transferred to a place of safety. When a third egg has been laid, or on the evening of the fourth day, remove him for good, and allow the hen to hatch and rear the young herself.

Owing to the regrettable circumstance which necessitates our going to press one day earlier this week, many answers to questions cannot be given until our next issue.—EDITOR.

Young Yorkshires Dying (W. Hall).—I can quite understand the young dying on the fifth day when you say you began to give crushed hemp like the sample sent on the fourth day if the parents fed with it. The seed is absolutely rotten inside, and totally unfit for any feeding purposes whatever. You should not give pure yolk of egg for three days. After the first day begin to mix crushed biscuit or bread crumbs with it; and I do not care about giving crushed hemp until the young are ten or twelve days old, on account of the risk of making the hen want to start nesting again too early, with the consequent risk of plucking the young. Read reply to "Homer" in last issue, and follow directions as to feeding whilst rearing young.

Upturned Claw (J. Clephan).—I cannot advise you definitely without having a clearer knowledge of the case. Is it a front or hind claw, and is it only just the claw—that is, the horny part, or toenail, so to speak—or the whole toe? Your sketch seems to suggest it is only just the horny part, in which case, provided it does not revert to its normal position after having a thin perch for a few weeks, the best thing would be to clip off the claw just a little short of the fleshy part of the toe, and touch it with a white hot knitting needle to arrest undue bleeding. Give it only perches about the thickness of a lead pencil for a few weeks, and if the above surmise is incorrect write again, and give full particulars, before resorting to further interference.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S. M.B.N.H.S., etc.

Java Sparrows, etc.

A. S. P.—The unknown bird is either a Weaver or Whydah; either a female or a male out of colour; many of these are very quarrelsome in confined quarters. It is impossible to say what species it is while out of colour, at any rate, without seeing it. At the same time, while they are continually chaffering with their companions, I have never suffered loss from them. Put up one or two more nest boxes (Hartz travelling cages make favourite nesting receptacles for many species), several kinds are figured in "Foreign Birds for Beginners," and if you read this book carefully you ought to have no difficulty in treating your birds. Let them alone for, say, another fortnight, and then if they do not settle down remove the quarrelsome bird. But I have kept all the kinds you name in quite a small aviary, and they successfully reared young while so kept; that is, the Java Sparrows, Zebra Finches, and Cutthroats did. If things don't improve, send me a rough sketch of your aviary, with dimensions, etc., and I will try and point out where you have gone astray. However, you must bear in mind Foreign Finches are not like Canaries; with the latter you pair up, and they breed forthwith, but with the Foreigners you often have to exercise patience, but rightly treated you get results in the end.

Virginian Nightingale, etc.

F. S.—It is the after results of the hardships of importation that you have to combat with, and a dose or two of Dinneford's Magnesia will be very helpful; at the same time the voidings must not be allowed to remain watery-loose—you must regulate the doses by the condition of the bird. Also give Parrish's Chemical Food on such days as you are not supplying the magnesia. Diet: This should be liberal, and must consist of seeds, soft food, ripe fruit, green food, and live insects; the three latter items should be given *ad lib.* at this juncture. As regards insects, give two or three mealworms daily and any beetles, smooth caterpillars, spiders, wood lice, and any garden pests you can capture. Seed mixture: Three parts each canary and white millet and one part each oats, sunflower, rape, and hemp seeds. As regards greenfood: Lettuce, flowering (seeding) grass and chickweed, are about the best. It is a hardy species, but must be kept out of draught. The Indian Mynah is not a songster, though well trained they make good talkers. It is evidently the Shama you mean; these are fine songsters, and once established are long-lived. They are grand birds, full of character, and when kept in sufficient quarters to indulge in a little flight are altogether charming. My bird, which has been with me four or five years, and had already been in this country a fair period when it came into my possession, lives on soft food mixture, about a dozen mealworms daily and a very little lettuce. Glad to note the Cordons and Gouldians survived.

To go with 'Gales and Linnets.

A. G.—Of course the number of suitable birds is fairly large, but the following should meet your conditions, and make a very pretty series. In the first place I should put in a couple of hen Canaries (Norwich) to entertain the Goldfinches. Get as opportunity offers pairs of the following, some at any rate, of which should breed: Zebra Finches, Spice Birds, Silverbills, Bronze Mannikins, Zebra Waxbills, Green Avadavats, Cutthroats, and Bengalese, all from 3s. 6d. to 7s. 6d. per pair. Long-tailed and Rufous tailed Grassfinches, Diamond Finches, Chestnut-breasted and Yellow-rumped Finches, 10s. 6d. to 21s. per pair. You have room in all for 12 to 15 pairs of birds not larger than a Norwich Canary—none of the above exceed this size, many of them being much smaller. You would find "Foreign Birds for Beginners" very helpful (see advt.). If you supply white millet, also millet sprays, a few oats and flowering (seeding) grass, groundsel, chickweed, etc., as greenfood, with cuttlefish and a little of such ripe fruit as the birds will take, not omitting ample bathing accommodation, your birds should thrive and do well. The diet given is in addition to what you are at present supplying to the British Finches.

Foreign Bird Querists will find in our handbook, "Foreign Birds for Beginners," 1/1, and "Budgerigars and Cockatiels," 6d. post free; a mine of information of use and interest.

Troupials, Conures, etc.

"Cockney."—I fear this is a large order. For instance, the number of Troupials is very large, and their size, colouration, etc., are very varied. They are handsome and striking birds, as a rule, of Starling-like form and demeanour. The body colouring is mostly glossy black, relieved with yellow, red, brown, and other colours. They are quarrelsome, and should be caged either in pairs or separately, unless you have a roomy garden aviary to turn them into. Conures are like Parakeets, rather noisy, and also quarrelsome, as a rule, with other Parrakeets; nevertheless, many of them are very beautiful, both in form and colouration. The species should not be mixed under any conditions, and should be kept singly or in pairs. Red-cheeked Bulbuls are handsome birds, full of character, very vivacious, and the charm of their movements makes them very entertaining and interesting birds, though they are not richly clad. Roughly, their plumage is chocolate-brown above, variegated with lighter brown, the underparts are white, with the ear coverts and undertail-coverts red. In form they are more elegant than, but very similar to, the Red-crested Cardinal. For exhibition purposes you would find the Gold-fronted Green Bulbul answer your purpose better; there was a figure of this species on a recent "C.B." coloured plate. Some of the rarer Troupials would also meet your need, but are not always obtainable. Of course the Gold-front is much more costly than a Red-cheek—thirty to forty shillings not being out of the way for a good specimen. I am afraid I cannot give you the numbers of the various issues, but if you look up about three years back, you will find my articles on Foreign Bird Keeping.

Brevities.

Parrot Query (E. Cooper).—Thanks for yours with remittance. Glad to note the bird is improving, and if you persevere with the treatment a complete cure should be the result.

Virginian Nightingale as a Songster (Soug).—This is a hardy species, once it has recovered from the hardships of importation; but while it has some merit as a songster, it is absurd to compare it to the English Nightingale, or even the Blackcap. There is not much variety in the Virginian's song, neither is it very sustained, though the notes are fairly sonorous and clear. I take it you are keeping it in a cage; this should be a roomy one; in such case, during genial weather its cage can be hung out of doors in some sheltered position. It is a hardy species, but the hardiest of birds will not survive draught for long. You will find diet and treatment given to another correspondent in this issue.

Plants, etc., for Parrakeet Aviary (W. A. Morse).—It is no use planting trees or bushes in such an aviary; they are straightly cut to pieces, but a very tidy and tasteful appearance can be got with gravel and turf, though the latter will need fairly frequent renewal. A patch might be reserved for the sowing of wheat, oats, etc., and if you had a few frames, with netting on to keep the birds off, till the growths were about three inches high, the result would be more pleasing. A couple of frames would keep the place fairly fresh and green, by changing them about a little. Get some spruce board 6ins. by 1in., fasten together with a few stretches, and cover with netting; make these of such a size that they can be conveniently handled and you should have no difficulty in keeping up a supply of growing grass, wheat, rape, canary, etc.

Tiny Birds: What Kind? ("Dodo").—You evidently misunderstood the man you purchased the birds from. I expect he said Orange cheeks, not Orange Tits. In other words your birds are Orange-cheek Waxbills. Cage your bird separately and feed it on spray millet, with flowering (seeding) grass as greenfood; also a little ripe apple for it to peck at; and if you can get it, a blighty spray of rose or fruit tree, or any blighty, non-poisonous herbage. Use a fine toilet spray and spray it with quassia solution, but remove all food from cage previous to doing so. The food and water hoppers can be replaced almost as soon as the spraying is completed. The Bullfinch query should have been sent to our Brit. Bird Specialist, Mr. G. E. Weston, and as I do not care to trespass on his territory kindly repeat query, and state whether you are keeping in cage or aviary. Put a few grains of Epsom Salts in the Waxbill's drinking water for one day only.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. Weston.

Obtaining a Starling.

Barry Dock.—To successfully rear the young Starlings, proceed on the general lines laid down by me in my answers last week (and this) concerning the hand-feeding of Thrushes, etc. I advise you to take at least two, however; it is far the best, and two (or even three) represent very little more trouble than does one "baby." It is generally best to take the whole nestful, as the youngsters keep warmer when all are together, and thrive better. You can occasionally moisten the food with water instead of milk. You must, however, give animal food of some kind, either mealworms or small garden worms (cut up to a suitable size), etc; or you could scrape a little raw lean mutton amongst its food frequently, or give a little grated dried liver. When it commences to feed itself, give a good insectivorous mixture designed for the coarse-feeding Softbills, and let it contain finely minced lettuce or other green-meat or vegetable ingredient in liberal quantity. The Starling is fond of a little scraped raw meat, hard-boiled egg, fruit, finely chopped green stuff, berries, worms, snails, beetles, wasp grub, gentles, and, in fact, most forms of suitable live food. You will have no difficulty in providing him with a good varied diet, on which he will live in health for a long period. Keep in a very large box-pattern cage, and clean out frequently.

A Yellow and a Reed.

Persimmon.—Neither the Yellow nor the Reed Bunting has any claim, strictly speaking, to be considered a songster. Their treatment in captivity I have often dealt with. Here it is again, in brief. The only "stock mixture" you require for Buntings is plain canary seed. Few will eat any quantity of other seeds, though now and again small oats, wild seed mixture, rape, cracked hemp, coarse oatmeal, maw, and one or two other seeds will be picked over and a few eaten but not sufficient to warrant their inclusion in a "stock mixture." To make up a little variety in the diet, it is best to give a feed of soaked ants' eggs frequently, and live insect food

British Bird Querists should purchase our "British Bird Manual," published in two parts, "Hardbills" and "Softbills," price 1/- each, or in cloth cover together, 2/3 post free.

(mealworms, flies, scoured gentles, small beetles and grubs generally) according to season. Fresh (live) ants' eggs are relished exceedingly. "Shop" ants' eggs (get the best quality only) are well liked if soaked in a little new milk, drained on a cloth, and then given the birds. Many Finches, too, appreciate them when prepared in this way. It is well to mix a sprinkling of a good insectivorous food among the ants' eggs, gradually increasing the quantity, as in this way Buntings (other species, too) can be got to eat it readily; and it is very good for them. Green food these birds are not very keen on, but you can always offer them a sprig of whatever you happen to have in the place, and they will "chew oil" a little.

Young Skylarks.

Thomas Shannon.—Skylarks can be very successfully hand-reared by the methods I recommend for Thrushes, etc. See the many replies given last week. I have brought up many a one that way. Equal parts of stale bread and best ants' eggs (freed from rubbish), made very moist with new milk, would be a very fair food. To rear strong youngsters, however, I prefer to proceed as follows:—Boil a fresh egg twelve minutes, and, when cold, well mix it with a fork into 2 crushed Osborne bisenits; add to this a small teaspoonful of best ants' eggs (removing bits of stick and rubbish, if present), stirring all well together. Just before you feed, take the necessary portion of food and make it into a sloppy consistency with new milk. In hot weather (and at all times) be careful the food is always fresh and sweet. Feed a little at a time only, but often, from dawn to dusk; and to give a feed or two after dark is not at all a bad thing. Cut a few mealworms into pieces, also, dip them into milk, and drop them into the nestlings' mouths. As the youngsters grow, too, add now and then a pinch of small but gritty sand to the food. It seems to act as a preventative to looseness of the bowels (or diarrhœa). Give also at times flies and like small insects; and live ants' eggs if you can get them. As likely cocks choose the boldest (most forward) and brightest coloured (most yellowish looking) nestlings. Very young birds want feeding once an hour (do not "stuff" them at any time) at first; every two hours or so at later stages. Cease hand feeding when they cease to "cry" to be fed, and are picking up food for themselves. Keep warm, cosy, and scrupulously clean. Put the food well down at the back of the tongue, and always be careful not to bruise or lacerate the tender mouths of the nestlings. When they come out of the nest (they do so at an early age), a good turf "run" should be provided for them to "exercise" on; it prevents cramp, a nasty complaint. The "Nutshell" booklet on the Skylark (post free 2½d.) will tell you all you want to know about this bird.

Widowed.

H. A. Senior.—Am sorry to hear of your loss of the Linnet. The beginning of the breeding season, however, is a period during which British birds frequently "turn queer." You can safely reckon on pairing up its mate with the cock Goldie you have, which is at present running with the yellow Yorks. hen. A Goldie seldom troubles about a change or a plurality of wives, and the fact that one hen is clear and the other marked will make no difference to him. But because this is so in his case you must not lightly assume it true of other Finches. The Linnet, for instance, if not exactly "faithful unto death," is at least faithful for a season, and will but seldom tolerate being run with a second hen. The disposition of the average Greenfinch is very similar, and he generally lets the second bird have unmistakable proof of his adherence to the principle of monogamy. And as a "flayed-alive" hen is neither use nor ornament, one has to hurry up to remove her. Birds differ so in disposition, however, and behave so differently even under precisely similar conditions, that it is well-nigh impossible to forecast the result of any experiment with them. For instance, I have already this season changed the mates of a mulling Linnet and Greenfinch without trouble resulting. But generally speaking the feathers have been sent flying around when I have essayed to do this.

Brevities.

Two Wild Plants (Daffodil).—No. 1 is the ivy-leaved speedwell (Veronica hederifolia), and No. 2 the hairy butter cress (Cardamine hirsuta). I have never personally gathered either as a "wildfood" for caged birds; but No. 2 is a member of an order of plants (Cruciferæ) which contains many of the weeds widely popular with bird-keepers.

What Constitutes a Dark Mule? (Larkie).—An exhibition dark Mule must unquestionably be dark all over, i.e., have no light (foul) feathers anywhere, except such as come through characteristic markings found on the parent Finch. For instance, a dark Goldfinch Mule would run light in colour in the neighbourhood of the vent; this is natural and allowable, but even a single white feather in wing or tail would lead to the bird being "wrong-classed" by any specialist judge.

Paint and Paraffin (A New Starter). — The smell of paint, if strong, is most certainly harmful to birds. A newly-painted cage should be given an "airing" before birds are placed in it. Paraffin I have never found affect my birds. But I never use it *freely* in cages which contain birds; only small quantities inserted into corners, etc., on the tip of a brush should I suspect the presence of redmite, which pest it infallibly destroys.

Loss of Young Birds (E.E.).—The Goldfinch-Linnet couple will be sure to nest again. You might try taking the cock Goldie out when the hen Linnet goes to nest, though I question very much whether he was guilty of throwing the young from the nest. Are you sure mice could not get at them? These little nuisances can do a lot of mischief in an aviary if allowed in it.

GENERAL.

Answered by the Editor.

Marked Birds (F. A.).—Paper duly to hand; thanks. We will conform to your wishes and return it in due course. The kindly expressions contained in your letter are much appreciated.

The Nearest Society (S.J.F.).—The nearest society to you would, we think, be the Greenwich and Deptford C.B.S.; hon. sec., Mr. H. R. Hearn, 11, Hardman Road, Charlton S.O., Kent.

An Address (C. Tomlinson).—It is against the rules to divulge addresses of correspondents without their permission. If you will forward your communication in a sealed stamped envelope, we will with pleasure put on the address and post along the letter.

An Idea (J. H. Jowett).—We are indeed obliged to you for sending us this suggestion, which shall be carefully considered and acted upon if possible. Many thanks for your kindness. You are quite right in thinking that colour printing is an expensive process; it is, very.

POST MORTEMS.

Mr. G. Yates, M.R.C.V.S., 2, College Road, Harrow, Middlesex, will examine and report upon dead cage birds for a fee of 1s. 6d. each bird; for reply direct, 2s. 6d.; analysis, 2ts. Subjects for post mortem examination must be sent packed in a box direct to Mr. Yates, with the fee, this and any accompanying letter being kept from contact with the dead bird. Any bodies sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Miss L. Parkyn.—Yorkshire cock Canary died in a fit. There was hemorrhage on the surface of the brain, and a large clot of blood enveloping the heart, the interior of which was perfectly devoid of contents. The lungs were pale in colour owing to their loss of blood. The whole condition may be summed up in the word "apoplexy," induced by the sudden spell of warm weather. He was a nice, robust bird, in a condition such as would predispose to an affection of this type.

CANARY QUERIES: Continued.

Answers received after previous page had gone to press.

Brevities.

Cure for Cataract ("Cataract.").—Am sorry to have to say there is not a ghost of a chance of curing the bird. Its only means of cure lies in a physical operation, which necessitates the substitution of artificial lenses afterwards in the shape of spectacles, which, of course, renders the operation impracticable in the case of birds. If you keep it in the same cage, and its food, water, and bath placed conveniently for it, it will get along famously, notwithstanding its loss. Do not attempt to breed with it.

Mousie Seed (Kit).—If the seed does not appear to have been fouled by the spoor or moisture of the mice, it will be quite fit for use after you have blown off the husk. You may, if you are in doubt, scoop off the top layer of seed and discard it. In a case of this kind, however, I should hardly think it is necessary, as the only real danger lies in the seed being fouled as suggested above. Do not wash it or heat it all all.

Shell less Eggs (J. Large).—You may let this hen go to nest again if she is strong and healthy. Feed her plainly, be sparing with soft food this time, give a crystal of sulphate of soda the size of a split pea in the water daily for three days, and after that twenty drops of chemical food in the water every second day, and twenty drops of gin on the alternate days until she is mating again. Then omit the gin, and give the chemical food daily, and half a teaspoonful of white millet every second day. Also smash up a little limey old mortar, and mix with the sand on the cage floor.

In Trim (Sulphate).—(1) When a pair have been left together whilst sitting and rearing young has been going on, it is not necessary to separate them to prepare them for the second round. In most cases the hen will be ready to start nesting quite as soon as the young are able to leave the nest, and sometimes earlier than that. (2) The seed you describe is probably red millet, which I have before this known supplied as gold of pleasure. The latter is considerably smaller, and is very little larger than maw seed, of somewhat similar shape, and a lustreless brown colour, rather than reddish. If you crack a few grains between your thumb nails it leaves an oily patch and an odour suggestive of onions. Taste a little, and it has a mucilaginous surface like linseed when moistened, and the suggestion of onions is more pronounced. This should enable you to recognise it quite easily. (3) In one ounce of water—i.e., two tablespoons—you may quite safely use a crystal of sulphate or iron the size of a split pea and pro rata when it is necessary.

Soft Moult (D. Williams).—Quite a number of remedies have been given for this trouble in the last few weeks in almost every issue. The birds are doubtless kept in an unsuitable place, and exposed either to cold draughts, rapid extremes of heat and cold, or damp. Look up replies to "A New Reader" and "G. C." in last issue, and "Soft Moult" and "R. R." in the preceding issue, and carry out suggestions as to general management given in those replies. Follow up treatment given in the first-named reply, and if that does not succeed in, say, a fortnight or three weeks, drop it, and try the course given to "G. C."

Hen with Cough (Caledonian).—As you make no mention about it, I presume the hen is not mated. See that she is kept free from all draughts and impure air. In addition to the usual seed diet, give half a teaspoonful of crushed sponge cake with four drops of sherry and two of cod liver oil emulsion well mixed in it every second day for a week. In the drinking water give first a pinch of Epsom salts and six drops of lemon juice for two days, and afterwards twenty drops of a mixture of two parts each glycerine and oxymel of squills, and one part each of ipecacuanha wine, and chlorodyne every second day for a week or fortnight, as may seem necessary. Any chemist will dispense you a few pennyworth of the mixture, and save you buying quantities of each.

Birds Dying (H. A. C.).—Thanks for particulars re purchase of bird. Should the test bird die, please note that I do not do post-mortems. See post-mortem columns for rules and address where parcels must be sent direct. As regards acquiring another Mule, perhaps you might meet with something you like at one of the principal shows in your town during the coming season, if you cannot meanwhile find a breeder who has what you want. The price would naturally depend upon the amount of light plumage, and may be anything from 10s. to 100s., or even more than that if very light.

LATE NEWS.

(Continued from page 474).

PORTMADOC.

Show held May 14 at Portmadoc in the Park, a grand place, well adapted for the mixed show; the birds were shown in a marquee provided for the purpose. The weather was all that could be desired, the show being well attended by visitors, who took great interest in the exhibits. We hope the show will prove to be a success. The genial secretary, Mr. Humphreys, had everything well arranged early in the morning, and the exhibitors were admitted to the grounds early in the afternoon, which, no doubt, proved successful, for this show is especially for exhibitors from a distance; other fixtures would, we think, do well to follow their example. The stewards ably assisted in every section. The quality of the exhibits was good all through. Norwich were few in number, but very good in quality. Yorkshires were far more numerous, and the quality here too was of the well-known standard. Goldfinches were a really good class; the mules were very fair, and the British Hardbills A.O.S. contained some really fine species. Foreign and the "Novices," also the local classes, were well-filled. We were pleased to see Mr. Edwards, from Wrexham, at the show, with his good Bramble and Goldie, also Mr. Rowlands, from Pwllheli. Both were looking after birds from their quarters. Mr. J. Williams (Llangoed) took the cup and special for best bird with a typical clear yellow Norwich. Mr. Pritchard (Criccieth) won the cup for best Goldie, Mr. J. Roberts winning in the local class. Mr. A. J. Gladwin judged.

The Critique.

NOR. YEL., CL., ETC.: 1, cup, and special, J. Williams, typical, good col. and contour, topping exhibit; 2, withheld. BUFF: 1, J. E. Jones, nice Buff, in good form. NOR., A.O.V.: 1, W. H. Williams, well-known wing-mkd. Crest, not in his best form to-day; 2, Fawcett, typical cinn. variegd., also winning in the Novice Class. YORKS. BUFF, CL., ETC.: 1, Walford, old winner, wing-marked, grand length, best feathered bird in show; 2, W. H. Williams, good length, wing and tail, shade open to-day, otherwise hard to find a fault with; 3, J. T. Jones, true Yorkie of good position and feather; vhc, J. R. Jones. YELL.: 1, J. O. Williams, grand tick, ideal type, long and slim, straight on legs, good col. and feather; 2, E. Edwards, cl. yell., long and straight, fine quality; 3, vhc, Parry, very nice class of feather; hc, J. R. Jones, very fine bird. YORKS., A.O.V.: 1, Lewis, very neat green Yorks, good quality feather, typical; 2, J. O. Williams, yell. variegd., one of the best Yorks. in the show, good length, stands well, wings well folded; 3 (no name in catalogue), variegd. Buff, nice quality, good feather. MULE OR HYB.: 1, B. J. Jones, variegd. Goldie Mule, good size and quality; 2, T. Owen, dark Goldie Mule, jonque, fine size and col.; 3, W. Jones, another jonque Greenie Can., in fine form; vhc, Robert, another grand variegd. Goldfinch-Can. BRIT. GOLDFINCH: 1 and sp., and two hc, Pritchard; 2, fine size, grand blaze, tans and buttons, in capital feather; 3, E. Jones; 2, another nice one, close up in all points, shown "in the pink"; 3, good face, richly tanned, sound col.; vhc, Lewis; vhc, Edwards; hc, W. Jones; hc, Owen, all worthy of their cards. BRIT. HARDBILL, A.O.S.: 1, Lloyd, good Hawfinch, not in the best of form, but nice size, colour, etc.; 2, W. H. Williams, clinking Bullie of rare size and substance, good cap, rich col.; 3, Salter, Yell. Bunting, good size and col.; extra 3, E. Edwards, good rich pencilling, grand size and col., very steady; vhc, J. Williamss, another good Bullie, fine cap and breast, large, very steady; hc, Pritchard. SOFTBILL: 1, E. Thomas, good Thrush, shown very fit; 2, Fawcett, very steady Skylark, well pencilled. FOR.: 1, Davies, very good Parrot, worthy of his position; 2, Roberts, monster Cockatoo; 3, M. Jones, African Grey Parrot, well shown; vhc, Isaac; vhc, W. P. Bell. BRIT. GOLDFINCH, NOVICE: 1 and sp., J. Roberts; 2, E. O. Jones; 3, T. Jones; vhc, W. Jones; hc, J. Jones. CAN., A.O.V., NOVICE: 1, Fawcett; 2, Isaac; 3, J. Griffith.

Use our Picture Postcards

The Yorkshire County British Bird and Mule Club.

SIR,—In answer to Mr. "Straight 'Un's" letter, I may say that I have not wanted the club to go on solely for Bradford, and for just the Yorkshire Union shows. "Straight 'Un" admits he expected to see some Bradford shows take the Britishers up. They did the first year, we know. Then he talks about the mistake of putting up the number of classes. But I fail to see where the mistake comes in. I think any society that gets a club's patronage should make the required classes, knowing that when they get the patronage the classes are a deal more likely to fill. How many Norwich had we before the Norwich Club was formed? Since the formation of this club we have without doubt seen some good classes. I should very much like to see a deal more interest taken in the Y.C.B.B. and M. Club. Mr. "Straight 'Un" also mentions something about wanting the "plums" ourselves. I think there have not been many ripe ones about. Now, what I want is to see more British at our Yorkshire Union shows. As I have said before, I think they would, without doubt, be a good attraction, seeing we have some good members outside.

T. H. Inman.

BIRKDALE.

Linnet contest held on the grass at Birkdale on Whit-Monday. Result: E. Buck, 100 secs.; R. Makinson, 91 secs.; W. Perry, 61 secs. Two gentlemen from Wigan (Messrs. Millingan and Macfarlane) timed the birds to the satisfaction of all. This is our first match, but not the last.—R. Makinson.

E. A. BANNISTER'S

NOTED

BEDDING PLANTS.

LADIES AND GENTLEMEN,—Again I have the pleasure of offering you my well-known Bedding Plants. This year, at my new Nurseries, I have the finest crop of plants I have ever grown; all the finest varieties and strong vigorous plants with plenty of good roots. All will give a grand show of first-class blooms in a week or two. All plants have been well-hardened off, and will transplant well. All orders packed in damp moss, in strong boxes, and carriage paid to your door. Satisfaction guaranteed.

GERANIUMS ! GERANIUMS ! !

I have a grand lot of these fine plants, all the finest varieties. Double and Single, all colours, mixed, strong plants. These will make a grand show of bloom in a week or so. 12 for 1s.; 50 for 3s. 6d.; 100 for 6s. 6d.; carriage paid.

FUCHSIAS, large strong plants, all the finest varieties, and colours, mixed, 12 for 1s.; 50 for 3s. 6d.; 100 for 6s. 6d.; carriage paid.

IVY-LEAF GERANIUMS, large strong plants, 12 for 1s.; 50 for 3s. 6d: 100 for 6s. 6d.; carriage paid.

MARGUERITES, for Window Boxes, white or yellow, strong plants, 18 for 1s.; 50 for 2s.; 100 for 4s. 6d.; carriage paid.

MARGUERITES, for Bedding, 18 inches, new colours, crimson, white, mauve, yellow, pink, blue, and many other grand colours, mixed; strong plants, 24 for 1s.; 50 for 2s.; 100 for 3s. 6d.; carriage paid.

PETUNIAS, Grand Prize Strain. This is the largest flowering Petunia in cultivation. Double and Single, grand mixture of colours, fringed flowers; strong plants, 24s. for 1s.; 50 for 2s.; 100 for 3s. 6d.; carriage paid.

CALCEOLARIAS, yellow or brown, strong plants, 24 for 1s.; 50 for 2s.; 100 for 3s. 9d.; carriage paid.

ZINNIAS.—I have a grand new strain of this lovely bedding plant, handsome mixture of colours. No garden should be without this beautiful plant; easy grower. Strong plants, 50 for 1s.; 100 for 2s.; carriage paid.

6d. a lot, STRONG PLANTS, 6d.

Correspondence.

An Appeal for a Chatham Fancier.

SIR,—Will you kindly place an appeal in your valuable paper for one of our brother fanciers, who has been ill for a very long time, and does not look like doing any more work? We fanciers of Chatham are getting up a smoking concert on his behalf, and I have got a few subscription lists for any secretaries or fanciers out of the district, who can have one by applying to me for the same. I hope you will let the Fancy know through your ever welcome paper. His name is W. Bradly (Chatham), and we want to try and get him a little business if we can to help support his wife and children honourably. (See notice under "Twitterings.")

H. WRAY.

22, Glencoe Road, Chatham.

Special Prizes at Dunfermline.

SIR,—In reading your issue for May 7th, I noticed Mr. Hutchison writing saying he did not get a special which he won at Dunfermline. I may say the special was not won by him, but by Mr. McDermid, of Stirling, who received the same within three weeks from the date of show. I quite sympathise with Mr. Hutchison over the way in which he was treated, but they are the real facts of the case. If he is taking the catalogue for it, there were a good few mistakes in it, and we paid the specials according to the judge's slips. This reply would have appeared last week, but I was leaving it for a more qualified pen than mine to explain. I hope this will meet with his approval, and clear any misunderstanding on his part.

ANDREW BUCHANAN.

A Green Border Section for the Green Canary Association.

SIR,—I should like to draw the attention of those who are interested in Green Border Fancies to the fact that the meeting of the "Green Canary Association on May 26th is to decide whether the Green Borders are to be taken into the association or not. It seems to me it will be a very good thing for us if they decide to accept the Borders, as we shall then have more classes provided at the different shows under the Green Club's patronage. It was most disappointing last season to find so many shows, even some of the largest—L.C.B.A., and Crystal Palace included—with only one class for Green Borders. I feel sure that if classes were provided, the birds would be forthcoming. Look at the splendid number at the International contest at Altrincham—70 greens in four classes; what could be better than that? Now, if those fanciers who would join the association, in the event of the Green Borders being taken in, would only let the secretary, Mr. Green have their names before the meeting, it might make a great difference in the decision of the Association. BORDER GREEN.

The Type of the Lancashire Canary.

SIR,—Having read the letter by Mr. J. Oldham, I quite agree that there is plenty of room to discuss the type of the Lancashire Canary without being personal. But as nobody has been more personal than Mr. Fuller (he also making a personal attack on my honour after the letter appeared in CAGE BIRDS signed "Lizard" without proof that it was I), you will no doubt agree that I have equally as much right to expose his shortcomings as he has to try and expose mine. But I do agree with "Lizard" where he asks what is to become of the Lizard, after the appointment of these nearly all Lancashire judges by the intelligent members of the L. and L.F.A., and it does appear on the face of it that they, as a body, are prepared, in order to safeguard the Lancashire, to lose sight of the Lizard. I notice, also, Mr. Oldham, that you think that Mr. Fuller was right in criticising judges who have put to the front birds in Lancashire classes showing crest properties. Had he complained at the time these birds were exhibited, there would have been good ground to think that he understood what he has been preaching. But he attended Rochdale O.C. show, and assisted the judges at Manchester, but made no complaints about crest properties. It was not until somebody told Mr. Fuller about these particular birds, and an open confession appeared at the end of the past exhibition season by Mr. W. Adams himself, that Mr. Fuller did so. Mr. Fuller was then quick enough to spot his opportunity of pushing his claims as a Lancashire judge, so he sets the ball rolling by criticising the judging of such capable men as Messrs. C. A. House, J. Garner, and another, simply in order to make capital himself. It will be interesting in the near future, if the L. and L.F.A. ever selects him to judge the Lancashire classes at any of their coming shows this season for these condemned judges to pay a surprise visit wherever he has been appointed to judge and pay particular attention to the Lancashire-cum-Crests and the painted Lizards, which Mr. Fuller so seriously complains about. In reference to his last blustering epistle, it is hardly worth taking passing notice of, and certainly is not worth the paper on which it is printed. In Mr. Baker's words there was no doubt a great deal of truth. He stated "Those who know Teddy best simply laugh to scorn his blustering effusions." I notice that Mr. Fuller tries to mislead fanciers that he is a professional exhibitor by telling the Fancy that he lost his noviceship twenty years ago at Manchester by winning special for most points in the show. It is evident he does not yet understand what constitutes a novice, and for his edification I might tell him that point specials won at first feather shows have nothing to do with three first prizes won in open competition. However, knowing for a positive fact that he was "stretching the truth" when he stated that he had received the congratulations of Messrs. J. and Walter Dewsnap, J. Smith, and others on his appointment as specialist judge, seeing that he is prepared to do this about one thing, it is only likely that he will do it about others. Therefore (I should be very sorry indeed to further hurt his feelings by calling him anything vulgar), I will conclude by telling him that I don't believe that he is yet a pro. exhibitor. No doubt seeing that you, Mr. Fuller, are so "very well known" outside Glossop, there's no doubt a lot of the old fanciers will scratch their heads endeavouring to think if you ever won a first prize in open competition, except amongst the Mules at the Palace.

EDWARD THOMPSON.

SIR,—Allow me to say a few words in regard to the winning Buff Coppy at the last Rochdale and Manchester Shows. I should not have written a word through what Mr. Fuller said, because we know him; but now Mr. Oldham has entered the field, I thought I would just say a few words. I cannot see why Mr. House and myself should be attacked about the awards we both gave. Mr. House and myself will vie any day with Mr. Fuller and Mr. Oldham, I think. Mr. House says he has been selected for Rochdale a long way in the "teens" (to judge at Rochdale Town Hall). I have been selected for Rochdale about twenty times local, and one open, besides a great many times for other towns. You must, Mr. Oldham, allow us to have an opinion on our judgment, and you can certainly have yours. The bird we are being criticised over has been on the show bench for about four or five years, and has won about twelve prizes, the largest number being firsts to my knowledge—and all under different judges, too, except in one instance. He won a first and a second at Manchester Show, two firsts at Nottingham, besides winning at other shows. The breeder of this bird was a great Lancashire exhibitor, and he had no Crests; therefore, where did the crest come from? And after the bird came into his possession, Mr. Adams must have thought him all right, or he would not have exhibited him. I told Mr. Fuller about it, and he promised to write to CAGE BIRDS on the matter. I have been waiting six weeks for an answer from Mr. Fuller, but none has come yet. Now, Mr. Oldham, where does our judgment come in, for all the judges were well able to judge Lancashires. I am not afraid of any fair criticism on type in the Lancashire. Mr. Oldham says the Lancashire C.A. have a rule to the effect that all birds shall be disqualified that show crest properties. Now, rules are nothing to go by in this matter, for we should find more than one wrong if you worked to your rules; therefore, if our judgment was wrong, we have other well-qualified men wrong with us; and Mr. Fuller and Mr. Oldham must be right.

J. GARNER.

Glasgow (Confined) Derby Association.

SIR,—I have been a member of this association since its inception, and this is the first occasion on which I have not obtained a membership ticket, though I was a member in 1909. The Glasgow Derby should not be allowed to go down. Who is the secretary and treasurer?

A MEMBER.

A New Cage Bird Society for Eccles and District.

SIR,—At a meeting held on May 11th, it was unanimously decided to form the Eccles and District Cage Bird Society. The next meeting will be held in the Patricroft Coffee Tavern, on Monday, May 23rd, at 8 p.m. prompt, to elect officers, etc., and place the society on a sound footing. Will all fanciers and those interested kindly attend? All communications and enquiries to be made to

H. W. JONES, Hon. Sec. (pro tem.).

29, Parrin Lane, Monton.

Order at once, Part II. of "Cage Bird Hybrids," 7d. post free.

The best, most complete, and up-to-date book on Mule and Hybrid breeding.

Bullfinches and "Plenty of Good Seed."

SIR,—Being an admirer of the Bullfinch, I always look forward with pleasure to correspondence on this handsome bird. In the interesting contribution from "E. E." in May 4th issue I observe that we are advised to give Master Bullie "plenty of good seed." From my own observations I find that his lordship seems to thrive better (in cages) on a rather restricted diet, for should he have "plenty to go at," he seems to get altogether too fat, and loose in feather. NONENTITY.

Prize Money at Camborne Show

SIR,—In reply to a correspondent re the above, on behalf of the committee, I beg to state that they suffered a very heavy loss at the last show, and this, added to a previous loss, placed the committee in a serious position. The greatest part of the prize-money was paid within a fortnight of the show, and the remainder as funds allowed. The committee decided to do this and pay prize-money in full rather than ask successful exhibitors to accept a reduction. This will explain delay, and any exhibitor not having received same will kindly communicate with me.

CHAS. J. ALLEN, Hon. Sec.

13, Trelowarren Street, Camborne.

White and Other Wagtails.

SIR,—I had my wish gratified when I read Mr. Teschemaker's account of his experiences and observations of the above species. I cannot remember whether I notified him of its occurrence here in Midlothian. I was fortunate to secure an adult male last autumn, and it was simply owing to the fact that I had made a careful comparison of the two species, pied and white, preserved in the Scottish Museum, that I was enabled to identify the latter. Briefly, my method was the same, viz., though an immature pied closely resembles a white in autumn plumage, yet there remains the unmistakable difference of colour in upper tail coverts; if these are light lavender grey you have a white Wagtail. But there is another method of setting all doubts at rest, and that is by drawing two or three feathers from centre of back, which will be reproduced in a week or two; then, if the specimen is a pied (say, immature in autumn plumage), and, therefore, having the grey back, these extracted feathers come in black. I have adopted the same method for ascertaining the sex of immature Chaffinches, Blackbirds, and Bullfinches, with this difference, that while I take the feathers from the breast of a Chaffinch or a Bully, it is advisable to take them from the back of a Blackbird, as young male Blackbirds are sometimes very rusty after the first moult. I may state for the benefit of those who wish to see the difference between white and pied Wagtails that there are four specimens of each in the Scottish collection showing the sexual, seasonable, and immature plumages. I notice the white specimen was got at Dunbar, in the adjoining county to this, as was also the Short-eared Owl, a species mentioned by Mr. T. in his article. Like him, I had some furious thinking before I hit on a plan to trap the wily Wagtail. I found that though he will gorge himself with mealworms shortly after being caught, he has a soul above them when at liberty. Perhaps this was due to the plenitude of insect life. I attributed it first to their distrust of the silk thread which adorns the tail of a captive mealworm, and connects to a trigger. But an experiment I made convinced me that he wasn't "having any," as the late Mark Twain would say, with or without frills. I was using the oval-shaped, invisible, Nightingale trap (no boards). A study of his habits gave me an idea. I observed that he had no objection to walking over sheets of sandpaper. Now I know Wagtails have a peculiar aversion to walking over dead leaves, or long grass. I therefore removed the triggers from my traps, and substituted a thin tin plate 6in. square which I prepared in the following manner: I punched two holes in edge, one inch apart, and bent a piece of wire like a hairpin, putting the two ends through the holes. I left about a half-inch of double part projecting up to form a loop, and soldered wire firmly to plate. I thus made two hooks of the ends of wire on the underside of plate, and gave the surface of same a coat of green paint, and while wet sprinkled it with sand. When it was dry I was ready. Proceeding to the burn where I had located the birds, I set two on the very edge of the water, bending back the net in the usual way. I caught the two hooks on underside of plate to the transverse wire which extends across these traps; then bringing over the long wire, which keeps trap set (fly wire), I passed it through the loop, and the trap was set. I had, before setting, scraped a slight hole in the sand, and by bending the loops of plate back or forward I found I could raise or lower the plate to any desired angle. This made it a simple matter to have the sanded plate level with, and to all appearance forming part of, the sand on water edge. Other two traps were set in the water, with the plates just showing above surface, and the remaining two I placed among some stagnant mud. When setting the under-water and mud traps I took the precaution to place some withered herbage round the plate to prevent the bird being made a mess of when trapped, and was careful not to leave them out of sight, so that I could at once secure the bird when I saw the net fly. I then made a trail of withered leaves from the water's edge, arranging same in such a manner that in avoiding these, and taking the apparently clear course up the water's edge, he had perforce to walk right into the trap, and sometimes his partiality for alighting on stones in mid-stream led him into the water trap. I had the mud trap set in a place where he was naturally desirous of something firm to stand on. I had previously stirred up that mud with a stick. There was food for reflection, and Wagtails there, larva of gnats, etc. I considered I had qualified, if not to command success, at least to deserve it. And success was mine. I never saw one out of over forty Wagtails which paid a visit to that favoured spot that managed to avoid all six; certainly when the trap sprung those in the vicinity sprung also, but I soon, by a flank movement, drove them gently up stream again. My captures included a Moor Hen, a Dipper, and an old lady's pug dog. Talk about owls' howling! My aim, however, was to obtain an adult male grey, good in size, colour, and, like Sairey Gamp, kinder disposed to confinement. Those who have seen my nephew's bird, first and special at Kelty, would hardly think that only a fortnight before that bird was being introduced to society for his debut. It was shortly afterwards I got the White in the mud trap. It is illustrative of the different dispositions of birds, that, try as I liked, I entirely failed to induce the White to become reconciled. I was reluctantly forced to liberate him. And I would add a word of caution here to those who have the sense to liberate these birds; take them out of town. The said specimen, though quite able to fly, and doubly desirous of flying, seemed to have lost his bearings, and blundered into a surveyors' office, where he was welcomed by the lady typist. I was asked next day to come and draw up a bill of fare for it, and, strange to say, it was quite tame, and eating out of her hand within a week. Feminine influence applies, perhaps, equally to Wagtails and War Offices!

J. STEEL.

Dalkeith.

A Recipe for a Washable Distemper.

SIR,—I should be very pleased if Mr. Wright would let me have his recipe for making a washable distemper, as I should like to make my own. I have just become a reader of your valuable paper, which I find is the best paper for all lovers of birds.

G. WHITEFOOT.

Mr. T. Williams (Bolton) also writes asking Mr. Wright to be kind enough to supply the recipe referred to.—ED.

SIR,—I find there is a mistake in my last communication re washable distemper. I wrote ½lb. packet of "Groco" size powder equals 8lbs. jelly size—not 3lbs. as printed.

(Miss) M. LATHAM.

SIR,—In your issue of May 14th, your correspondent, Miss M. Latham, asks a question which I am pleased to answer. From practical knowledge and experience, I can guarantee that "Duresco" is quite harmless to birds. I also should like to say that "Duresco" is not a distemper really, although it is frequently called so, as it was originally named a washable distemper, notwithstanding there was no distemper in it. "Duresco" is, in fact, a metallic water paint; and the only one on the market up to now that is really and truly washable, and which can be varnished without any preparation just the same as oil painted work. I also wish, for the benefit of your readers, to point out that the binding medium of all ordinary distemper is size (note Miss Latham's recipe) made from animal or fish glue, and these from their nature are liable to rapid decay. If fresh when first laid on, under the alternations of the atmosphere of the bird-room or dwelling, they absorb the moisture of the atmosphere, and immediately a process of decomposition is set up, and fœtid odours are given off, to the prejudice of birds and persons who come within their range; therefore, it is absolutely necessary (to be on the safe side), if distemper is used, to wash off clean to the wood if in cages, and if on walls to the bare plaster. The distempers that I mentioned are quite as cheap as the one Miss Latham has made, as they require a large quantity of water in their mixing, which reduces the cost considerably. I am pleased to see that Mr. W. Wright in his letter on above, corroborates my statement that no distemper will stand the test of washing. They are called "washable" because they do not rub off with ease. "Duresco" can only be obtained from decorators. JOHN ENGLAND.

The Colour-feeding of Canaries.

SIR,—I should like to express my relief on reading the interview with Mr. MacFarlane (issue May 14th), where he says he "would like to see colour-feeding done away with; but in these days it has to be done, though it harms the birds." I am sure it is very encouraging for any one to read the details of management, so plain and simple and to the point. The chief thing, however, is this gentleman's opinion on colour-feeding. I am glad I have, for once, captured the opinion of a prominent gentleman; my idea on the matter is heartily in accordance with that of Mr. MacFarlane. If it ever was my luck to reach by vast experience the position of "A Judge on the Bench," it would be my first call for a show with Canaries in their natural feather, the true Canary neat and trim. It remains to me very curious as to why the Canary should be coloured in order to gain its high merits, and its extra money value; but, of course, as with the new flying machines, we must be ahead of the times, have something new and startling, some novelty, something that never has been before, at any cost, dangerous or not dangerous.

J. H. JOWETT.

Should the First Eggs be Taken Away from Hens?

SIR,—In reply to Mr. H. Bashford's letter in last week's issue of CAGE BIRDS, I would advise him to remove each egg as it is laid, but to give the hen a dummy to keep her quiet. Only one is required. On the evening of the third day replace the three eggs, and on the following morning remove the cock. In this way you will find the hen will settle down; and if by chance she lays the fifth egg, this also would be good. In regard to hens sitting on and off, the eggs would not be likely to spoil, but the young would be hatched in most cases one day after the other, and instead of being a nice level nest of birds, they would vary in size. When hatched in this way they never do so well. The cock must not be returned until the young are out of nest. If you find the hen is eager to nest again, she should not be encouraged in any way. If you can keep her feeding the young until they are 28 days old, so much the better; but should you have to return the cock, the young must be partitioned off, so that the hen can feed them through the wire. When a cock has been paired to more than one hen, it is very rarely he will help to feed the young, and he cannot be trusted with them.

W. MINTY.

SIR,—I have a pair of Canaries in an outhouse constructed of wood without heating apparatus. They are in an aviary 6ft. 6in. long, 6ft. high, 4ft. wide, and have been in this place since April 1909—over twelve months. These birds were just as forward in laying as my indoor birds. When the hen commenced to lay, I took the eggs away, as they were laid, but I substituted pot eggs. She should have laid the fourth egg on the Sunday morning. She did not do so, so I took out the pot eggs, placed in the nest her three eggs on the Sunday morning, and on the Monday morning she did lay the fourth egg. So she missed a day before completing the nest of four eggs. When they were due to hatch they were all hatched in a day. Two were hatched on the Saturday afternoon and the other two before Sunday morning a fortnight later. So I believe in all the birds hatching on one day. But at the same time, it is not natural, although we do not always follow nature; for instance, fowls sitting. I have no trouble with my other hens, respecting the leaving of eggs. Mr. H. Bashford might study these questions: Is the cage clean, is there plenty of grit, and is the feeding proper? He should not interfere too much with the birds. And if he only keeps his eye on the advice given by Mr. Claude St. John, he will not have much trouble. The youngsters I referred to were all out of nest on the 18th day. They are framing well to feed, and nicely feathering. The hen has gone to nest again, and has not attempted to pluck them. I intend to put all my birds outside at the year end about August.

HEALEY DAWSON.

The Battersea Open C.B.A. Show.

SIR,—I always make it a practice not to answer anyone who uses a nom-de-plume, but seeing that our chairman replied to "Visitor" in last week's CAGE BIRDS, and is not able to state the whole of the facts re the delay in issuing the catalogues (through his being unable to be at the show until late in the evening on account of business), I feel it my duty to lay before "Visitor" the actual cause of the delay. I admit we had a grand entry, and possibly had we known we were going to have such a large entry no doubt the committee would have engaged another judge; but the two named being the advertised judges, we were duty bound to abide by the conditions of the schedule. No doubt this year we will add a clause, if necessary, empowering the committee to engage another judge. Now, the delay in issuing the catalogues was caused by the late delivery by some of the railway companies (principally the Great Western), and I hope if the officials should read this, it will be the means of waking them up. In fairness to those exhibitors who paid their entry fees and railway charges I delayed the judging, which meant upsetting our arrangements, and hence the delay. If "Visitor" had attended a neighbouring show, where more than two judges were adjudicating, and with two hundred less entries, he would have found they had not catalogues on sale with awards as early as Battersea. Our catalogues were on sale at ten minutes to eight—in fact, we were paying prize money at the time they arrived. I think "Visitor" will admit there is no other society better conducts their show, or better tries to cater first for those exhibitors that help make the show; and second, for those friends that attend and help swell the gate, than the Battersea Society.

F. EASTERLING, Hon. Sec.

SIR,—"Dark Mule" seems very much interested in the working of Battersea shows, but his letter is dictated by nothing but jealousy. Personally, I have had no British bird exhibitor apply for a British bird judge other than the one appointed who seems always to give the greatest satisfaction. Certainly, I have heard a few British Bird exhibitors grumble (and who has not?), no matter who has been the judge (generally of one clique or kidney) if their own pal is not judging. When you infer that the judge was adjudicating on Goldfinch or Linnets at 7.30 p.m., I give you the lie direct, as far as the judging at Battersea went, though I am afraid such was the case at your own show, where more than two judges were engaged. The officials do not look upon a judge as a machine; take it from me, the members of this society are good sportsmen, none better, and I am proud of such good sports. Take my advice before trying to find fault with this society and its management—improve the one you belong to; it wants it. We do all we can to study the comfort of exhibits in our charge.

F. EASTERLING, Hon. Sec.

"Domestic Bliss in Canaryland."

SIR,—Please accept my sincere congratulations and hearty thanks for the splendid treat you have given bird lovers with the Spring Issue of CAGE BIRDS. Each illustration of the birds depicted in the coloured plate, "Domestic Bliss in Canaryland," is true to life, and reflects the highest credit upon your artist, Mr. Norman, and marks him out as a true lover of Nature. The country is lovely just now in all its Spring freshness, when each birds is trying to eclipse all others in lusty full-hearted song. Nests are to be found everywhere, the hen sitting in happy bliss, while her lord and master, on a bush or tree near by, is pouring forth his song. A few young-fledged birds meet the eye—of some of the more early species, such as the Thrush, Blackbird, etc. Nearly all the Spring migrants are now here in their usual places, and many of them are looking the worse for their journey. No doubt it must be most trying on them to arrive in the cold weather we had in April, when all insect life was at a discount. The song of the Willow Wren is heard in the hedgerows. My delight in these tender migrants and their gentle ways seems to increase every year, and to listen to their clear, delicate, descending song, like a peal of tiny bells, fairly charms my inmost soul.j Let us think for a moment of the power of endurance they must have to face wind and storm, perhaps all the way from the other side of the Equator. No man can fathom that mysterious longing for their nesting sites when the Spring comes. There can be no doubt that many of them perish on their long journey in the chill sleet and cold east winds which sweep across our land. How happy they must be when that journey is accomplished. To the observant eye, the happy rendering of their song and their jaunty way denote they are so. Even down by the streams, where the graceful Wagtail is to be seen at every bend, one can notice that Spring time brings joys to these likewise. The amusing antics of the Dipper fairly puts Harry Lauder in the shade. Just watch the male as he advances to his lady love, who sits demure and, to all outward appearance, as unmoved and as solemn as a judge. He advances to her in short, jerky hops, singing his love song all the time. I have not the slightest doubt he is saying "You are my Daisy; you're as sweet as sugar candy," picked up, perhaps, from some of the young lads who also frequent such spots with their "best girl" by their sides. But I must say, if the "best girls" are as unresponsive as the lady love of the Dipper, well, I feel for them. She does not answer back, "I am very fond of you, Sandy"; indeed, one would think she is made of stone, so still and calm she sits, showing off her beautiful white breast and shining coat of black. I have watched them at their courtship in all its forms, and feel that every year I can learn a lesson from the life of our wild birds.

J. PATIERSON.

The Future of the Cage Bird Union.

What is it to be?

SIR,—Although I cannot see how a continuance of this discussion can be of any benefit to the Cage Bird Union, or of any interest to the Fancy in general, I would just like to put Mr. Johnson right as regards one or two statements appearing in his last letter. I have never questioned whether Mr. Crawhall knew the show was an unlicensed one or not; nor did I mean to convey that impression. What I said was that Mr. Crawhall "unwittingly made a mistake, and freely acknowledged it." To make my meaning clear, sir, I would like to say that the show in question was held at Stanhope (Mr. Crawhall's native place) on Whit-Monday, 1908. The show had about 94 classes altogether, only eight of which were for cage birds. Mr. Crawhall had been at home visiting his mother, who was ill at the time. His sister asked him if he would send some of his birds to the show, and if they won would he give her the prize-money? Mr. Crawhall said it would be against the rules, as they had not a license, but it being only a small show held during the summer, and not in the ordinary show season, he thought they (the Union) would not mind if he exhibited there, especially under the circumstances. That, sir, was where Mr. Crawhall "unwittingly made the mistake," and not, as Mr. Johnson appears to think, because he did not know the show was an unlicensed one, and I think, sir, that Mr. Johnson will now admit that his reference to the old proverb, "There is none so blind, etc.," is quite unnecessary, at least so far as Mr. Crawhall is concerned. Mr. Crawhall put himself to some trouble to oblige his sister in this matter, and took two birds which he could ill spare from the breeding room, and sent them to the show. He did everything quite openly, not even using a fictitious name, which I believe is more than some of the correspondents in this discussion can say. When he found he had done wrong he freely acknowledged his mistake; yet he was most severely punished, and Mr. Johnson thinks the Union would have been justified in punishing him even more severely, "not," as he says, *"because* Mr. Crawhall was previously a strong supporter, but in spite of it," which, in my opinion, amounts to the same thing. I cannot quite follow Mr. Johnson's line of argument here, for I fail to see what Mr. Crawhall's previous connection with the Union had to do with the severity or otherwise of his sentence. Taking Mr. Johnson's line of argument, it naturally follows that those who opposed the Union would be at perfect liberty to break its rules, without fear of the consequences, and as recent events have undoubtedly proved this to be the case, Mr. Johnson will probably admit that the more he writes the more he proves my statement that the methods of dealing out justice adopted by the C.B.U. were rather peculiar. In regard to the case of Mr. Birchley, I can assure Mr. Johnson that I did not misunderstand him in the least; it would be difficult to do so, his argument is so one-sided. I know as well as Mr. Johnson does why Mr. Birchley was punished, although I fail to see as clearly as he does why he should have been punished so severely, while the principal offender went scot free. Clause 1, rule 2 of the C.B.U. says the objects of the Union shall be, "The advancement and protection of the interests of breeders and exhibitors generally, and the suppression of fraud, cruelty, and dishonourable practices in connection with cage bird matters"; yet here we have a case where a bird is stained and sold to an unsuspecting exhibitor without anything being done to punish those responsible for the fraud, while the victim of the fraud is severely punished because he exhibited the bird. Yet Mr. Johnson says that is justice. If this kind of justice were to continue, where would the novice exhibitor ultimately be? He would be in the power of two of the most unscrupulous parties the Fancy has yet known, viz., (1) fraudulent sellers, (2) the Cage Bird Union. According to Mr. Johnson's idea, any unscrupulous person could dispose of a faked bird to a, let us say, novice exhibitor without any fear of punishment: but as soon as the novice exhibits the bird (perhaps the first time he has ever shown a bird) he is punished by the Cage Bird Union, the very body whose duty it is, according to the rule I have quoted, to protect and look after his interests. It is so directly opposite to what the aims and objects of the Union were supposed to be that one naturally wonders how such an argument could possibly be brought forward in support of the Union. Why should the innocent victim of a fraud be punished, while the perpetrator of the fraud goes free? Mr. Johnson has not yet told us why the Union cannot get at those who sell stained birds. Surely selling a stained bird to an exhibitor is fraud, and as one of the objects of the Union was the suppression of fraud, I again ask Mr. Johnson why the Union cannot take proceedings against these persons, and thus comply with the rules. I quite understand that staining a bird is not a legal offence, so long as it does not cause any unnecessary suffering, but I also quite understand that staining a bird and then selling it as a genuine natural coloured bird does constitute a legal offence. If Mr. Johnson doesn't think so, let him try it. He will then probably learn a little more about law (even though it be an ass). Now I hope he understands what I mean, and that he will answer my question. You will understand, sir, that I do not propose, as Mr. Johnson appears to think, that every exhibitor who shows a stained or faked bird should be exonerated from blame simply by pleading that they did not fake the bird. My idea is that the Union should not be unnecessarily harsh upon an unsuspecting victim, while allowing the real culprit to go free. I don't hold, as Mr. Johnson appears to do, that so long as someone is punished, justice has been done. I want the real culprits punished, even if that punishment does strike some fanciers high up in the exhibiting world. Mr. Johnson never made a greater mistake than to bring the Birchley case forward as a sample of Union justice, as it clearly shows what would happen to a novice if he should be placed in the same predicament, unless he has powerful fancier friends to support him. Of course, if it is Mr. Johnson's opinion that the sort of justice as meted out by the C.B.U. is correct, he is quite welcome to it, and it is no use our saying anything further; and I can only hope that he will never suffer from the justice which he upholds. In reference to my question concerning the Newcastle Society, "A Delegate" says they don't need answering. Rather strange, is it not? seeing that the Newcastle secretary himself has answered them. "A Delegate," however, admits that the 1910 show was to be the suspended one, and this admission, together with a glance through the answers to my questions (supplied by the Newcastle secretary), will at once explain to fanciers why "A Delegate" did not think it necessary to answer them, and also proves at once, as I said it would, who was right in his previous statements, "A Delegate" or myself. I stated that the Union had done nothing to enforce their decision when opposed by a powerful society, and here is the proof. Newcastle Society sent in their resignation to the C.B.U. on March 24th, 1910. Three weeks afterwards, viz., April 15th, 1910, the C.B.U. secretary sent an intimation to the Newcastle Society to the effect that they could not hold their show under the C.B.U. rules. As the Newcastle secretary says, "Is comment necessary?" Was it merely a coincidence, sir, that the C.B.U. secretary dated his intimation to Newcastle on April 15th, the same day that my first letter appeared, and was received by the Newcastle secretary on April 18th, or was my letter really responsible for the intimation at that particular time?

W. REID.

Mainly Sentimental.

SIR,—It is with much fear of our worthy Editor's wrath that I take my pen in hand to reply to Mr. W. P. Bell, in the last issue of CAGE BIRDS; but perhaps he will excuse me when I say that I have bought his paper every week (out of the none-too-large allowance of a schoolgirl) from the time I was about thirteen, so I can claim, I think, to have been one of his youngest subscribers. However, I don't dare to challenge all comers on the fact. I want to endorse every statement made by Mr. Bell. I think he is quite right in saying that very few women take an interest in nature study. They may, indeed, be kind to a bird or animal left in their charge by brother or husband, may gush, "Oh, the little darlings!" when one shows them one's birds; but it is the exception to find a lady who is really and sincerely devoted to nature study in any form. If they are fanciers, then I admit those I have met have been perfectly delightful; but that, I think, applies to nearly everyone fond of Nature. If you want really nice people, look out for bird, animal, or flower lovers (flowers in a lesser degree, as usually they are not quite so reliable a guide). Parsons' wives are, in my experience, very much given to the sentimental abuse of bird-keeping: "so cruel, so heartless! don't you know?" However, I make no sweeping assertions, and quite agree with Mr. Bell in praising the Rev. C. D. Farrar, etc.

A Chat on Foreign Birds.

A Paper read before the North London C.B.A. by Mr. S. WILLIAMS, F.Z.S. on April 20th.

(*Concluded from page 447.*)

We now come to a smaller Australian bird, the Zebra Finch, one of the most charming little fellows. Sometimes this is called the Chestnut-eared finch. It is barely three inches long; the beak and legs are pink, with the upper parts of the body grey, and underneath white; the tail and chest are lined with black zebra-like markings. The chestnut patch on the cheeks and on the flanks is wanting in the hen, so the sexes are easily distinguished. These birds breed fairly well in cages, but, of course, do much better in an aviary. Usually from 4 to 7 white eggs are in each clutch, and they take twelve days to incubate.

An Equally Good Breeder.

Another equally easy bird to breed is the Cutthroat or Ribbon Finch, a native of Africa, which is a small bird of a pinkish-brown hue all over. The cock differs from the hen by having a band of red stretching from the ear under the throat, and meeting the ear on the other side. It is from this that it gets its not very inviting name of Cutthroat.

These birds are about the easiest of any foreigners to breed; at least that is my experience. A pair may be bought for 3s. 6d., and as soon as they settle down to their new quarters, if you supply a square box with a hole at one end, and some nesting material, they will not be long before they start house-keeping. They lay from 4 to 9 white eggs, and hatch in about 13 days, and four or five broods in a year is not uncommon.

Easy to Keep.

Another family of birds easy to keep and always in show form are the Mannikins, of which three or four kinds are frequently imported in large numbers—the Black-headed, Three-coloured, White-headed and the Bronze-winged. All these birds we get from the East Indian Islands.

The Black-headed Mannikin is a little bird with black head and breast, and the rest of the body a deep reddish brown, and a slate-coloured bill. Both sexes are the same colour, but the beak is usually a little finer in the case of the hen. No. 2, the Coloured or White-breasted Mannikin, has a white breast and underpart, but otherwise is similar to the first-named. The White-headed Mannikin is brown in every part except the head, which is a creamy white. The fourth, the Bronze-winged Mannikin, is a little bird with a rusty black head and upper parts, with a bronze patch on each shoulder, and the sides mottled with black and white. The sexes are very much alike; if anything, the hen is a trifle duller in colour.

Another little family are the Waxbills, among the more commonly imported being the Orange-cheeked Waxbill, the Avadavat (both the common and green varieties), the African Grey Waxbill, the Lavender Finch, and the Cordon Bleu. The only difference in the sexes of the African Grey Waxbill is that the hen is a little less pink on the under parts. In the case of the Orange-cheeks the orange is a little paler in the hen. In the case of the Avadavat, that is the common variety, we have a vast change when the breeding season starts; the cock then assumes a scarlet dress and the sides are spotted with white. In the Green Avadavat the hen is a little paler in colour, and the black stripes on the side are less black than in the cock. In the Cordon Bleu, the cock bird has a crimson ear mark, which is lacking in the hen.

Another frequently imported and hardy Indian bird is the Spice Bird, a dark brown body with a mottled side and flank of white and grey. I have kept these birds out of doors all the year round, but it is not always that you can do this. In any ordinary bird-room no doubt they would live for years, and might occasionally breed if given a small cocoanut husk.

Another African Species.

Another bird which arrives from Africa is the Whydah, two varieties, the Pintail and the Paradise, being fairly plentiful. To those who wish to keep only one pair, I would give the advice to buy a pair of these birds. The birds are blessed with two suits, which differ as much as an evening dress and a sweep's working clothes. The Paradise Whydah when out of colour is a fawn and brown bird, and when in full colour a black and fawn with a chestnut collar; and in addition to a black tail, it grows two centre feathers about 11 inches long, and two small ones shaped like black fans. Anyone seeing him in this dress would never connect him with the dingy little Sparrow-like bird he was before.

Another family of birds which undergo an entire change of colour every breeding season are the Weavers. These birds when out of colour do not cost more than 2s. or 2s. 6d. each. The Red-billed Weaver, a brownish fawn when out of colour, is mostly imported; when in colour he assumes a black mask, and an orange brown breast. The Orange Bishop Weaver assumes a lovely black breast and head, an orange hood, and longish hairy feathers on the rump. The Crimson-crowned Weaver and the Scarlet Bishops are also to be picked up out of colour for a few shillings.

With the few birds I have mentioned a useful selection could be made, from which anyone could make a start; he would find them all useful on the show bench in ordinary competition, and I should like to see some shows begin by having a novice class or limit class for foreigners, so as to keep the man with the long pocket from "swamping" the starter. Perhaps if this were done we should see more entries at our shows.

At the close of the paper a splendid discussion took place, the lecturer being plied with questions, which he ably answered.

It soon became apparent that several recruits had been secured for this section, and several pairs of birds which the lecturer had brought up to demonstrate upon, changed hands; and others asked the lecturer to obtain other species for them. A hearty vote of thanks to Mr. Williams concluded a very pleasant evening.—R. P. HARPER, Hon. Sec.

EXPERIENCES IN BIRD KEEPING.

A Paper read before the Stockton-on-Tees C.B.S. by Mr. Tait.

The following account of his experiences in the keeping of both Canaries, British and foreign birds, was given on May 5th by Mr. Tait, before the members of the Stockton-on-Tees and District C.B.S.

It is not my intention, said Mr. Tait, to try to teach you anything in connection with bird-keeping, either Canaries or British birds, but to give you some of my experiences in the keeping of birds of both sexes. To begin with, the first bird that I ever possessed was a Redpoll, or what is commonly called a "Frenchy"; why "Frenchy" I cannot tell. This bird was bought by me as a Brown Linnet for the handsome sum of threepence. Now this bird I had in my possession for at least eight years; I think I was about ten years old when I made this large purchase. A more taking little chap I never had, for as soon as I got him I set about taming him down; and, my word! he did tame! The little rascal would fly out of his cage on to my shoulders and sing most merrily. After getting him nicely tame I set about hand washing him in such a fashion as to cause me to blush with shame now that I have learned better. But he survived it all. I had heard that to be a good birdkeeper and exhibitor one had to be experienced in the methods of hand-washing, getting up, etc., for, bear in mind, this bird was going to win all before it, but unfortunately it never was shown.

The First Canary.

Having one I wanted another, so I had to get the consent of my parents, and a "sub," of course, to buy a Canary. I bought what I was told was a cock, but it never sang. I tried all sorts of things—sugar, milk sop, potato, bits of meat, etc.—but no; no song was forthcoming. I sometimes think that had it been a cock and able to sing it would soon have lost all his song under the above treatment.

The next thing to be done was to sell this one and purchase another; but as for selling, why, bless you, I couldn't give it away, so it had to live on.

The next bird that came into my possession was an Indian Parrakeet. Ah! now I had something that could talk; it could say any mortal thing, according to what I was told; but it never said a word. I had heard tell that to train a Parrot to talk one needed patience, and should come down every night when all was quiet and then set about the task of "Pretty Polly," "Pretty Polly," "Pretty Poll." Well, believe me, I said "Pretty Polly" until I was nearly black in the face; and this, bear in mind, was done while I was in my night-shirt; and many a time I returned to bed too numbed to sleep. However, after a lot of perseverance he started to whistle; he could whistle almost anything: he never spoke a word.

The next in my list was a Cockatoo. I should like to point out before proceeding that these latter birds were brought over by my uncle, along with two monkeys, a mongoose, also two tortoises, of which in due course I became the happy possessor. The Cockatoo was a black one—as black as a nigger's head—but when moulting time came round it started to moult white. This I could not understand, so I had to remain patient until my uncle returned home again, and then the problem was soon solved. It appears that the cabin boy was particularly fond of this bird, and used to handle it with his greasy hands, until the bird was absolutely set in with black fat. This bird I actually sold for ten shillings, and speaking to its purchaser one day, he informed me that he would give me ten shillings to take it away, as it was that destructive.

Starting in Earnest.

A few years had rolled by, and I thought I would start birdkeeping and breeding in real earnest. I had a little pocket money now, so I saved up and bought a pair of Canaries, and thus I started off. I didn't know how long a hen had to sit, or anything else about it. I think the poor beggar of a hen must have sat for nearly a month, for the eggs were clears. I had another try, but to no good. So I "chucked up" for that year with nil for my labours.

I waited till the next year, and bought a Goldfinch and two hens. I put Mr. Goldie along with his lady friends and watched their performances. I noticed he made a lot to do over one, so I whipped out the other, and let the two go on house-keeping. Behold my surprise when she had laid four eggs and began to sit tight, with Mr. Goldie feeding her. I watched day after day, until the eggs were hatched. There were two—two little bits of skin and fluff. Ah! I had it now—I could breed mules with anyone. I watched for about twelve days, and then I thought of a Mr. Marshall. So off to his house I went, and brought him up to see the youngsters. He looked and looked, and then what do you think he said? "How much for them as they are?" "Nothing will buy them," I said. "I will give you half a sovereign." "You won't. Why do you want them so badly?" I asked. "Well, don't you see," he said, "there is a clear yellow, and the other is just ticked." Of course, I saw it; but, believe me, I knew no more about a clear yellow bird than the man in the moon. Mr. M. kept coming, and at last induced me to part with the prize. With his half-sovereign I bought some more birds, and kept on with Canary and Mule breeding for some time; and then I had a severe check. The gas fumes got into my room and seven birds were laid stiff. I sold out what I had left, cages and all. All I kept was my little "Frenchy" and the Parrakeet.

A year or two elapsed before I again ventured. This time it was with a nest of young Thrushes. I reared them successfully, and then a Blackbird's nest. Of course, I couldn't sell, so they had to be given away. Then I went in strong for Linnets. A Linnet always appeals to me. Such merry little chaps they are, and always ready to sing. I have kept scores of these little brown pets. I might also state that I bred a good many Mules, for a boy, for, bear in mind, I had to pick up nearly all I know from personal experience. I have not had many to help me, for my parents were averse to my keeping so many, but gave way under the impression that I was not in bad company when among the birds.

More Recent Years.

Now we will leave those little items behind and come to more recent years. I might state here the different birds I have kept. They include Blackbirds, Thrushes, Starlings, Larks, Pipits, Redstarts, Blackcaps, Whinchats, Stonechats, a Nuthatch, Wagtails, Tits, Linnets, Goldies, Chaffies, Greenies, Brambles, one Hawfinch, Yellow Buntings, Bullfinches, Siskins, Twites, Redpolls, and one Jackdaw. Of course, I am speaking of Britishers. I have kept a few hardy foreigners. My ambition has always been to be a successful exhibitor. I have paid for my knowledge,—and dearly at times. Of course, when a chap is known to be a little desirous of getting good exhibition stuff, there are heaps of winners brought to him as sure winners, could not be beaten, won every time out, etc. And, of course, one is tempted to plunge, and when he gets the birds, what disappointments; and he is heart sick and out of pocket. I have had some of the above, and have never got a right one yet. My contention is that when the majority have won several times and something has come out to brab them, the exhibitors of the former want to "get through them," and then it is they look for "green-horns" like myself to palm them on to.

In conclusion, let this be a lesson to us all. My advice is, when getting the stuff, pick out your winners and moult them yourselves; and then, if these birds are worth selling or buying, make a bargain. But I do not believe in old fanciers wearing the new suit, as it were, and when the birds are threadbare palm them on to some poor novice for a new prize, and then go and buy some more winners. This, to my mind, is a crushing blow to a novice. I have myself been disheartened many a time. Let us help one another as a society: let old fanciers help young ones and not be selfish. Then, I feel sure these old friends around us will never be forgotten. It is good to think that So-and-So helped me up, not that So-and-So robbed me, and put me down. Now, gentlemen, in thanking you for your kind attention, I wish you all every success in breeding, and I sincerely hope that our next show will be a record one.—J. W. LOWES, secretary.

HOUSE'S CANARY MANUAL

By C. A. House. Post free 1/2 (postal order).

A thorough and practical guide to the general management and breeding of Canaries, written by a well-known expert and judge. It contains chapters dealing fully with the breeding, etc., of every member of the Canary family, including the German (or Roller) Canary.

An illustration of each bird, by the master Canary artist, Mr. H. Norman, reproduced in the finest art style.

There are also exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases and seeds—a compendium of knowledge approached by no other book of its kind at the price.

CAGE BIRDS, 154, Fleet Street, London, E.C.

Fitting Up and Stocking a Birdroom.

By H. C. BROOKS (Horsham.)

(*Concluded from page 426*).

A sieve for sifting sand, and tins or boxes for the storing of seed and sand are also necessary, and if the room is furnished with a cupboard this will be very useful for storing seed hoppers, nest pans, and other utensils in when not otherwise in use. In the absence of this a nest of drawers or some suitable boxes should be provided. Some fanciers also have a seed mill, but I have managed very well without; what cracked seed I want I crack with a rolling pin, which I use also for crushing biscuits for the soft food. The hard boiled eggs I press through a piece of perforated zinc fitted over a box about eight inches square by four inches deep.

Lastly, a good firm table completes an outfit which will answer well for any bird keeper. Of course, I am well aware that many fanciers manage with fewer articles than I have above enumerated, but I don't think I have suggested anything but what will be found of real use.

Hints on Buying Birds.

So much for the fitting up; now for the stocking of the bird room. On this head I daresay my views will not quite coincide with those of some other fanciers. The advice generally given to beginners desirous of purchasing Canaries, with the object of endeavouring to breed winners, is to go to some successful fancier—one who breeds his own winners—and place themselves in his hands entirely, to give them the best value he can for the money they are prepared to give.

This would be alright if it were stated how one is to tell which of the many fanciers advertising in the Fancy papers do actually breed their own winners. But as they nearly all claim to do this, and as others advertise stating that they have supplied hundreds of winners, how is the beginner to know which are the genuine breeders? And it sometimes happens that the man who claims to have bred and sold "hundreds of winners," in another column advertises for birds ("must be cheap," his advertisement generally runs), and the inference to be drawn is that he is really a dealer. So unless one can be sure of getting into touch with an exhibitor who is also a breeder of exhibition birds, I think the beginner would be better advised to buy from one of the smaller men. He would probably get better value for money, and if he had the birds on approval, and deposited his money with the Editor of CAGE BIRDS, he could guard against fraud.

Of course, one must not expect exhibition birds at 25s. a pair, neither can one expect birds by any means so true to type as those portrayed week by week. I always think that artists flatter the birds. I have never yet seen a drawing of a winning Yorkshire showing any frill, or with crossed wings, yet these failings are often possessed by winning birds if the show reports are accurate. Neither have I seen a Norwich drawn showing any browing. They always have such nice heads and beautifully short tails and flights. But are the winners so faultless? I think not. No! The beginner must look upon these drawings as depicting ideal specimens, and endeavour to get and to breed birds as near like them as possible.

The chances are that the fancier will have been a reader of CAGE BIRDS some little time before he makes up his mind to "go in for" Canaries, and he should look up his back numbers and read the articles on the particular variety he fancies, and so get acquainted with the good points of that variety (and the bad also—for it is as necessary to know what to avoid as what to obtain). And if a good show can be attended he should make a study of the type of bird that wins, and compare the winners with the losers, and try and see where the former excel. By so doing he will be the better able to judge whether the birds sent him on approval are of the right stamp, and likely to make a good foundation for building up a strain of his own.

Finally, to achieve success in the Fancy, one must be possessed of rather more than an average amount of patience; but this, coupled with a strong determination to succeed, has enabled men of all ages and temperaments to get over even greater difficulties than the breeding of a Crystal Palace winner.

Raising Young Canaries in the States.

How an American Fancier solved the problem of mortality amongst young birds.

By JAMES M. ADAMS (Hartford, U.S.A.).

Through the kindness of Mr. James Bunting, of Macclesfield, Eng., I receive CAGE BIRDS every week, and you may be sure it is a welcome visitor. A dozen or so years ago I raised a few birds one season. Then my time being taken up with the care of my own little ones, I dropped it for six years, and then began anew. Quite a number of my friends were raising a few, and, of course, that gave me the fever; and with five females I raised some 40 odd birds.

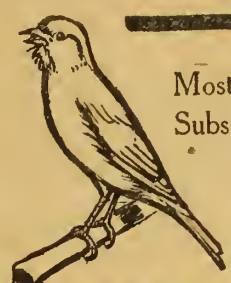
Not Deterred by Difficulty.

My stock I procured from a dealer in German or Hartz Mountain birds, but the colours did not suit me, and I determined to get bright coloured birds as well as good singers. I saw a green male, and made up my mind to get some myself. No dealer could get me any, and I could not procure them in New York at any large importing house; but that did not deter me. I heard of Mr. So-and-So having Greens, but often after travelling 15 or 20 miles found the Greens, dark birds, but more the colour of one of your English Sparrows, which was not my idea of a "Green."

I kept on, and two years passed before I got just what I wanted. These I procured from a Polish man who was in the Spanish-American war, and who remained in Cuba long after it was over, and he bought them from a sailor who brought them to Cuba, from some island near the coast of Africa. I said they were green, and green they surely were, no brown tint at all on their heads, wing or tail feathers, and I felt satisfied. Afterwards I procured others, so as not to inter-breed, and thereby weaken my stock. Of course, I was not satisfied, but set out to get Cinnamons and Norwich, and have since succeeded in breeding some fine birds of both breeds. I have tried to get some good Yorkshires, but have never succeeded in getting any that came anywhere near the standard in shape or carriage. A friend bought a pair of yellow Yorkshires from a Mr. Oliver, in Macclesfield, but not succeeding in raising any, desired me to try, but I found they were in no condition to breed, being allowed to hang in a very draughty room—they were suffering with asthma.

Solving the Problem.

There is a loss of 50 per cent. of young Canaries in this country mostly before they are feathered out; almost invariably, on meeting a fancier and asking him how many young he had, he will say, "Well, I had two or three clutches, but have only one nest now." And enquiring what the trouble was, one would receive the reply, "The mother would not feed them. She left them just as they were feathering out." Now, I had had the same trouble, and I made up my mind that something was wrong, and felt that it was not natural for a mother bird to let her young starve, so I began to study the young more closely, and came to the conclusion that there was a cause for the mother's seeming neglect.



Believing I had discovered it, I tried a simple remedy. That season I hatched 135 young and raised 125; last year I hatched 102, and raised 98; and this season, not having the room, as I had to move, I only let nine hens sit, and only once each, and hatched out 39 birds. One fell out of the nest and broke its legs and wing, so I mercifully put it out of its misery, and the other 38 I reared, and out of them got 23 males and 15 females. So I believe I have solved one difficulty in raising young Canaries, though, being a novice, I don't pretend to know as much about them as any of your English fanciers.

The Why and the Wherefore.

Now I am going to tell you how I reasoned it out. Perhaps all Englishmen do it, but here the breeders who live in this vicinity tell me I would kill my young if I tried it. Now some of them wonder how I have such luck. But I merely smile. Well, I figured it this way. About the time the mother bird would forsake her nest of little ones was generally when the pen feathers began to show through the skin of the little ones. I noticed the mothers trying hard to feed the little ones and also that the little ones appeared weak and that it was with an effort they raised their heads to eat. After a while the mother would leave them to die. I made up my mind that the young were sick, and that the sickness was caused by inflammation, which was the result of the birdlings' flesh being dry and the inability of the feathers to readily come through the skin. One particularly good mother who had a great liking for her bath-dish I picked out to experiment with, and when she hatched her second nestful and the young were seven days old or thereabouts and began to show signs of weakness, I put a dish of water in her cage. It was hardly in when the mother got in and drenched herself, and then popped on to her nest, and standing over them let the water drip on her young. Then she sat down on them and seemed to be so pleased. The next morning the little ones were much stronger and eager for their breakfast, and it seemed as if you could almost see the feathers grow.

This I repeated for five or six days, and the results so pleased me that I have tried it on all the others the past three seasons, and I firmly believe it has been the reason of my good luck. I would like to know what the readers of CAGE BIRDS think. Let them criticise or laugh, or agree with me, I believe it the thing to do, and want to know what others think. I have found it much better as soon as cool weather comes to put all females in a room away from the males, and after making up my mind which males I want to mate them with, put them in the breeding cages all on the same day. By so doing I have found the birds do better work and will much more readily mate with the ones I desire them to mate with, than if I had left them where they could see each other all the time.

I often wish I were living near so many fanciers as you have in England. Here there seems to be so much jealousy among the few breeders we have, a condition to be deplored, as a greater interest could be created if it did not exist. I send best wishes for a successful season in 1910 to all readers of CAGE BIRDS.

ON THE TOP RUNG:

And How I Got There.

(That well known Scottish artist and fancier, Mr. Thos. Aitken, has undertaken a commission for CAGE BIRDS to visit within the next few weeks two or three prominent breeders North of the Border, and put on record for the benefit of our readers brief details of the methods by which they have attained success in the hobby. Last week's subject was Mr. A. McFarlane and his Norwich Plainheads.—Editor.)

George G. Henderson (Glasgow).

Mr. George G. Henderson is known as one of Scotland's most prominently successful exhibitors of British birds. He has been a fancier of British birds all his life, influenced greatly by his father, who, despite being now in his seventy-seventh year, is still very keen on birds.

Mr. G. G. Henderson (Glasgow).

Mr. Henderson keeps his birds in an aviary erected in his back garden. It can be removed bodily from one place to another, is constructed of wood, and has a sloping roof. Its measurements are:—Seven feet broad, nine feet long, height eight feet at back and six in front. The whole structure is raised about a foot from the ground. The bottom of the aviary is sheeted with zinc, over which is a layer of soil about three inches thick. The "bad" air is carried through an opening (which is covered with fine wire netting) in the top half of the back wall.

This aviary has two doors; an outer entirely of food and fitted with a burglar-proof lock (which is obvious!) and an inner of the sliding pattern, the top half of the latter being netted over with fine wire netting. There are no windows. The skylights in the roof admit plenty of light, and these face due south. The aviary is painted white inside, and a nice dark green out.

Several empty wicker cages (such as German Canaries are imported in) are nailed up on the walls for the birds to roost in or perch on. Two perches extend across the whole length of the aviary, one at each end, fixed a little over half the height up.

The roof is covered with zinc, and this (Mr. Henderson says), although dearer, is preferable to most other coverings that fanciers are accustomed to use for the roofing of their aviaries.

At the time of my visit Mr. Henderson had in his aviary between twenty-five to thirty birds, comprising Hawfinches, Bullfinches (hens only), Goldfinches, Greenfinches, Chaffinches, Bramblefinches, several kinds of Buntings, and a Siskin. On the floor were two or three large rectangular pans for the seed, and a large earthenware vessel full of water for the birds to drink from or bathe in.

Do you keep your birds in this aviary the whole year round?—Yes; with the exception of those I intend colour-feeding for exhibition.

What do you feed your birds on?—I give a mixture composed of Canary, English and German rape, teazle, sunflower and hemp seeds; also wild seed mixture. In summer I take away the sunflower and hemp, and give all the fresh wild seeds I can lay hands on. In winter I give pieces of apple, as well as thistle (and other) heads, which I store away during the summer.

I only colour-feed Yellowhammers and Buntings, using cold pepper with a very little hot.

I like to keep away hemp seed from all my Finches during the moult, as it has a tendency to darken the colours, especially the blaze of the Goldfinch.

What is a good thing to brighten the blaze of the Goldfinch? There is nothing to beat groundsel. Give it to Goldfinches, not in handfulls, but armfuls.

Where do you get your British birds from?—I get them from all parts of the country. For good big Linnets you can't beat Scotland; also Greenfinches for colour-feeding. For natural colour classes, however, one must get his Greenfinches from the south of England. Cornwall for the biggest Chaffinches.

How do I treat my fresh-caught birds? Well! when I get them I turn them into a large flight and feed chiefly on inga and teazle, withdrawing the inga altogether when I get them on to seed. Then I single them out. I think teazle is as grand a seed for British Finches as one can get.

I don't like keeping my birds in the house, as not only are they troublesome and messy, but they don't do near so well as when kept outside.

Bramblefinches never do well when kept singly in cages. If gloss and polish are desired on a Bramblefinch it must be constantly in the aviary.

What are the chief essentials for successfully keeping British birds?—Plenty of sunshine, fresh air, and adequate ventilation.

What bird should you recommend a novice to start with in the British bird hobby?—A brown Linnet; I started with one.

Wild Bird Life.

Summer Birds.

One of the earliest of the migrants to arrive here is the Ring Ousel, but he simply rests a few days in the South before continuing his journey to the Northern moors and uplands. He is so like the Blackbird in shape and colour that he passes through many countries without attracting more than a passing glance. Strictly speaking, the Wheatear is the first migrant to put in an appearance. He may be seen some time before the tinkling notes of the Chiffchaff are heard in the copse. The Wheatear is always an attractive bird; his colouring, bold appearance and habits of seeking some mound of earth or small elevation, compel attention, especially when he is flitting from clod to clod upon a recently ploughed field.

Just now we are interested in the doings of more recent arrivals, and in our rambles we listen eagerly to strange notes. The majority of the Warblers love the thicker foliage, and it is by their song we frequently identify the birds before the shy ones come into the open. The restless Willow Wren may haunt the thicket for days without our once obtaining a glimpse of his slim little body, his delightful song falling from the tree tops like summer rain each time we pass his domain. The passionate song of the Nightingale, throbbing out of the dark in broken but melodious music, may enthral us night after night, and his superior notes in the broad daylight catch the ear among those of the dozens of other songsters, without our once seeing the sober-clad performer; and it is only by diligently searching each bush from which the song proceeds that we are able to admire his graceful contour. The Warblers are not wild and mistrustful, but they love seclusion and the quiet of the woods, and have a great dislike to being disturbed, but if one seeks a suitable spot and remains perfectly quiet, the inmates of the surrounding bushes will readily expose themselves. The Willow Wren will hunt the leaves within arm's length, the Whitethroat will sing from the nearest bramble and the Nightingale, with swelling throat and drooping wings, will "jug jug" and "water bubble," and with long drawn out notes of exquisite sweetness, amply repay us for the time and trouble taken to make such close acquaintance with the "King of Songsters."

"CAGE BIRD HYBRIDS"

Parts 1 and 2 are now obtainable on Order from your Bookstall or Newsagent.

This notable work by that great expert and authority CHARLES HOULTON (associate editors C. E. Weston and C. A. House) is being published in 8 Monthly Parts, SIXPENCE EACH.

TWO COLOURED AND TWO ART PLATES WITH EACH PART.

This is a standard work, written by an acknowledged expert, and prepared for publication by experts. It has been designed as an authoritative and carefully practical work, embodying in the simplest and most straightforward language all that there is to be known on the peculiarly difficult and scientific subject of Hybrid Breeding.

There are no less than Sixteen Coloured and Sixteen Art Plates. EACH PLATE IS A PERFECT STUDY OF AN INDIVIDUAL HYBRID—not a pretty group suitable for a children's picture-book, but a plate that shows the correct colour, the correct shape, the present-day type and general characteristics of modern hybrids.

A PRACTICAL BOOK FOR PRACTICAL FANCIERS.

It will, we feel sure, be generally conceded that "Cage Birds" has produced in "CAGE BIRD HYBRIDS" a dignified book on a difficult subject—a standard work of the highest merit and a fitting monument of the hybrid breeder's art.

Part 2 is now on Sale. It tells the secret of the breeding of clear and even-marked Canary Mules and Exhibition Dark Goldfinch-Canary Mules. The Two Lovely Coloured Plates depict (1) a Clear Yellow Goldfinch-Canary Mule and a Dark Yellow Goldfinch-Canary Mule (2) the Bramblefinch-Chaffinch Hybrid.

Ask for Part 2 "CAGE BIRD HYBRIDS," at all Bookstalls or Newsagents, or fill up the attached Order Form and we will send it you packed flat in cardboard, post free for 7d. (Postal Order).

Part 1 can also be obtained on the same terms; or for 4/6 prepaid, we will take orders to supply the complete work—in parts as published. Send your order at once, with remittance to

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor of the *bona-fides* of either buyers or sellers In all transactions the adoption of our Deposit System should be insistedupon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit will be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—6d. for the first sixteen words. One Halfpenny per Word for each word over sixteen. MINIMUM, 16 words 6d.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first Sixteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Sixpence.

Headlines or Footlines 6d., 9d., 1/-, 1/6 according to size.

Small prepaid advertisements of a general nature and not connected in any way with the Cage Bird Trade are inserted at the rate of ½d. per word throughout. Minimum 12 words 6d.

Advertisements must in all cases bear the bona fide name and address of the advertiser, and no advertisement will be inserted if addressed to a receiving office, or similar place of call.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

WALSH, Bird Specialist, Pheasant Aviaries, BLACKBURN. Telephone 947.

"Our Canaries"; Parts 1 and 2 of the best book ever published about domesticated Canaries are now on sale. Post free, 7d. each part.

SUPERIOR ALUMINIUM RINGS

METHODICAL BREEDERS should not omit to mark their birds with these high grade rings; they are the lightest, neatest and most reliable made, yet inexpensive. The rims are perfectly round and smooth, and the numbers cannot fill with dirt. These are the reasons why they have been used and recommended for years by leading fanciers. "Cage Birds" says:—"One of the best samples we have seen." 150 for **4/-**, 100 for **2/9**, 75 for **2/3**, 50 for **1/6**, 25 for **10d.**, post free, carefully packed. Consecutively numbered with or without year. Supplied **with or without flanges.** Give them a trial this season, and test their superiority for yourself. **Breeding-room Registers, 7d.** each, post free.

THERE ARE TIMES

When breeders of Canaries and Hybrids find it inconvenient to cook and mince up egg for their birds. We can help them, for our

EGBISCO

which is already cooked and sterilized, only requires dumping with cold water to make a reliable, efficient and genuine Egg and Biscuit Food, upon which the breeder may rely implicitly. Do uot confound it with any other preparation on the market, for it resembles none of them in the least. Sold in 3d., 6d., and 1/- tins, by us, and all Corn and Bird Shops. It has been pronounced by publicly-recognised authorities to be by far the

MOST ACCEPTABLE FOOD
of its kind on the market.

One trial makes constant users.

Obtainable from all Dealers, in 6d. Tins. & 3½lb. Bags 1/3.

Write for further particulars and samples:—

SPILLERS & BAKERS, Ld., CARDIFF.

COLOUR FEEDS.

READ THESE and don't be gulled by anyone. This new Royal Red has cost me 2d. per lb. more than eve before, and the quality is guarantced far above any that has ever come into England. The following gentlemen had the Hottest birds in England :—

NORWICH FLAINHEAD CUP WINNER, 1909-10.
MR. J. E. DAVIES, STOCKPORT, writes, April, 1910.—" My birds last season were the Hottest living. This helped me greatly to win Scores of First Prizes, Cups, Medals, etc., including the N.P.C. Challenge Cup in all the keenest competition. They made other birds which had been moulted on other Colour Feeds look like Natural Coloured Ones. I used nothing only your Royal Red, and I shall require another lot when your new arrives.

JAS. PRICHARD, BIG WELSH CHALLENGE CUP WINNER.
21, WOODLAND TERRACE, MOUNTAIN ASH, SOUTH WALES, 14TH APRIL, 1910.
" Mr. Sandiford, Dear Sir,—You will be most pleased to here that I have won the Welsh Norwich Challenge Cup for the best Three Birds at all Shows held under the Welsh Cage Bird Club, also Rose Bowl for best unflighted at Club Show, and Sandiford's Cup for Hottest team of Three Birds at all Club Shows through Wales. All these were fed on your Royal Red Feed, and shall send you the order this time again as there is nothing like it for Colour. Truly you are the Colour King."

MR. J. SMEATON, BIG SCOTCH CUP WINNER.
8, BELLFIELD AVENUE, MUSSELBURGH, MAY 2ND, 1910.
" Mr. Sandiford, Dear Sir,—All my birds have been fed on your colour feed, have won President's Prize Scottish Plainhead Club; Edinburgh Norwich Cup; Bruce Lindsay Cup; Cup for best colour, Preston. Fed the winner of the E.N.P.C. Gold Medal, Pendeltou and Salford. I am expecting to have my usual supply again this season as your colour feed is certainly the best."

MR. BINNS, BLACKPOOL, CRYSTAL PALACE YORKSHIRE WINNER.
May 28th, 1910,—" Send me 28lbs. Royal Red, your Colour Feed did well for me last season."

MR. DORMER, GREATEST CINNAMON WINNER IN THE WORLD.
7, SPRING ST., RISHTON, NR. BLACKBURN, MAY, 1910.
" Dear Sir,—Please book me 100 lbs. of your Royal Red Feed, for I find it the best and cheapest feed that I have ever used and gives the best results. I am not giving you a list of my winnings as they have been reported through the fancy papers so often until they are threadbare, and I am being constantly asked what feed I use, and the answer is Saudiford's Royal Red. I won specials at Accrington, Blackburn, Liverpool, Nottingham, Leicester, Sunderland, Hanley, Gateshead, Newcastle, Longton, Bristol, South Shields, Wallsend, Manchester, Morpeth, Edinburgh, and Crystal Palace."

W. N. MIDGLEY, BIG PALACE WINNER, 1910.
CHESHAM HOUSE, WINSLOW, BUCKS, 28TH APRIL, 1910.
" Dear Sir,—For two seasons past I have used your Royal Red for colour feeding my Norwich. My birds on each occasion have come through a good colour, and, as you are aware, I have had a fair measure of success on the Show Bench which cannot be obtained unless a satisfactory colour is combined with the other qualities that go to make winners."

ALFRED GREY, MORPETH. APRIL 20TH, 1910.
" Mr. Sandiford, Dear Sir,—I have much pleasure in stating that in my opinion, your colour feed is undoubtedly the best on the market. I did even better with it last year than any previous year, for I had the pleasure of winning one of your medals for the Hottest Fed Bird at Alwich Show; I also won over 60 first and second prizes duriug last show season, and all my birds were fed on your Royal Red Feed."

MR. BAKER, COWES, ANOTHER PALACE WINNER, writes—
" Once more I have the pleasure of congratulating you on the success of your Colour Feed. At every Show when I exhibited I was always well in the money. My noted Clear Yellow, that I fed entirely on your Food, won the Cup and Medal for the hottest fed bird. I think it speaks volumes for the quality of your noted Red Feed. I was very successful at the following Shows:—Plymouth, Dulwich and Peckham, Camberwell Baths, L.R.C.A.Portsmouth, Newport, Bournemouth. Send 1 cwt. of your new Feed as soon as it arrives."

MR. J. C. BARNES, BIG JUDGE. SHEFFIELD, MAY, 1910.
" Dear Sir,—For the benefit of the fancy, I desire to advise those whose ambition it is to obtain that necessary depth and brilliancy of colour for the Show Bench, to give your Royal Red Feed a trial. For a good number of years I have used no otber. The results I have obtained are so widely known throughout the Fancy that it is really absolutely unnecessary to give further details as to the wonderful power your colouring agent bas upon one's stock." Winner of numerous Silver Cups, Medals, and so forth, including for colour alone 4 Cups and several Medals at various All England Shows. I can conscientiously speak most highly of the production you place before the Fancy at so low a cost to provide quite ample colour for present day requirements. A better feed I know not. My birds, year after year, have always come out ablaze in colour.

MR. SPILLMAN, DEVONPORT, NORWICH SPECIALIST and Feunder of the Strain that has brought such fame to the West of England, writes—
"All my winuers this season were moulted on Royal Red with a little of your Natal added, and the verdict has been whenever shown—" Always in the Mouey."

Prices, Royal Red, 1 lb. 2s., 2 lbs. 3s. 6d., 5 lbs. 7s. 6d., 14 lbs. 17s., 28 lbs. tins 32s. Hot Natal, 2s., lb., 2 lbs. 3s. 8d., 5 lbs. 8s. 3d., all carriage paid. Established 1879.

"COLOUR Feeding of Canaries and other Birds." By J. W. Ramsden. Tells you how to mix the colour-food, and how to moult the birds to get the richest possible colour; price 3½d. post free: From the Publisher, CAGE BIRDS, 154, Fleet Street, London, E.C.

"CANARY Breeding for Beginners." By Claude St. John. An exceptionally helpful, intensely, practical, and instructive handbook for beginners and tyros at Canary breeding. It is profusely illustrated and contains innumerable hints helpful to all young bird-keepers; price, post free, 7d.; cloth bound, 1/2: From the Publisher, CAGE BIRDS, 154, Fleet Street, London, E.C.

"HOUSE'S Canary Manual." By C. A. House. Eighth edition. This edition, which has been re-written by the author, includes among other interesting features, a chapter on the Roller Canary, and has been brought entirely up-to-date. It contains information on feeding, rearing, diseases, etc., and a chapter with a model illustration is devoted to every known variety of Canary. Superbly illustrated by the champion Canary artist, Mr. H. Norman. Every bird depicted is a veritable model, and shows the breeder what to aim for; post free 1/2; cloth bound 2/2: From the Publisher, CAGE BIRDS, 154, Fleet Street, London, E.C.

HAVING taken one round, am not breeding further this season; can spare some first-class pairs, in full breeding condition; will be sold as mated, or otherwise; some specially large Yellow hens; no birds sold but what I have bred successfully from this season: Fildes, Rookfield-avenue, Sale, Cheshire.

"THE Stock Book," our invaluable "Breeding Room Register," by G. E. Weston. A well-known fancier has said of it:—"It makes bird breeding easy." This book no breeder of birds can possibly afford to be without; it simplifies the operations in the bird-room, and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred; it contains both pedigree, breeding, young bird and show registers of simple and unique character, in addition to useful account pages, and many invaluable "Hints for Emergencies," designed to help all bird breeders; post free, 7d. from the Publisher, CAGE BIRDS, 154, Fleet-street, London, E.C.

☞ NOTICE THIS ☜

Positive and Undeniable Statement:—

I possess what I offer

That is why you DO NOT receive silly excuses, nor have to wait after sending your order.

And if you require any of the following Varieties, you will find them such value as cannot possibly be procured elsewhere.

NORWICH PLAINHEADS.—Cocks, Clear Yellow, 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, 30/- upwards. Clear Buff, 6/-, 6/6, 8/6, 10/6, 12/6, 15/-, 20/-, upwards. Marked, 5/6, 6/6, 7/6, 10/6, 12/6, 15/-, upwards. Hens—Clear Yellow, 3/6, 4/-, 4/6, 6/-, 7/6, 10/6, 15/-, 20/-, 30/-. Clear Buff, 3/3, 4/-, 5/-, 7/6, 10/-, 15/-, 20/-. Marked, 3/-, 4/-, 5/-, 7/6, 10/-, 15/-. Pairs Norwich Plainheads, matched for immediate breeding, 7/6, 8/6, 9/6, 10/6, 12/6, 15/-, 20/-.

CRESTS.—12/6, 15/-, 20/-, upwards per pair; odd cocks, 7/6, 8/6, 10/6 upwards; hens, 5/6, 7/6, 10/6, upwards.

YORKSHIRES.—When I say Yorkshires, I mean it—not something with feathers on merely, the breed of which would puzzle anyone to define—cocks, 6/6, 7/6, 8/6, 10/6, 15/-, 20/-, 30/-; hens, 3/-, 3/6, 4/-, 4/6, 5/6, 7/6, 10/6, 15/-; pairs matched for breeding, 8/6, 9/6, 10/6, 12/6, 15/-, 20/-, upwards. These birds possess length, type and quality, and have no equal elsewhere, at anything approaching similar prices.

SONGSTERS, par excellence. These cannot be touched elsewhere for quality and value; sing anywhere, pure bred Yorks., Norwich or Mules, 6/6, 7/6, 8/6, 10/6; thousands to select from.

MULING HENS.—For light or dark muling, grand Sib hens, mostly clear buff, and of pink-eyed strain, 4/- and 5/- each; a few yellows, same strain, 6/6, 7/6; no dark blood in them; light Mule breeding, 3/6; dark, 3/-, 4/-; feeding hens, 2/6, 3/-, 4/- each.

CINNAMONS.—12/6, 15/-, 20/- pair; hens, 4/-, 5/-, 6/- upwards.

SCOTCH FANCIES.—From 10/6 each.

DUTCH FRILLS.—30/-, 40/-, 60/- each.

LIZARDS.—10/6, 12/6, 15/- pair.

EXHIBITION AND SINGING MULES in stock, particulars free.

Goldfinches, Bullfinches, Linnets, Parrots, Budgerigars, best and cheapest procurable. Travelling cages in all cases 3d. extra. All birds on approval. A few 1910 Norwich cocks and hens ready.

W. RUDD, THE Bird Specialist, **NORWICH.**

BOOKLET FREE.

Finest Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all time to send my Parrots on four week's trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among Grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all Parrot buyers. Full details of our original system of selling Parrots on four weeks' trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard. Telephone No. 40 Morecambe.
PARROT AVIARIES, MORECAMBE

FINGER TAME BIRDS.

To the general public, who can read between the lines.—Please note, whoever squeaks most is most injured. If a worm is trodden upon it will crawl, and so does the poor bird dealer who has lost all his self-control. We are the one and only firm who can produce the finger tame birds. People who imagine they are going to give up the secret were very much disappointed once, when they tried to bribe a little child of seven years to tell them how his mother trained the birds. Now he will make a vague effort, if his poor brain will allow it, to impress something upon the public, who are too well read in the 20th century to believe such far-fetched effects. There is no trick or faking in bird taming; it is all done through skill and kindness. In every part of the country there are specimens of our tame birds. We invite our customers who were not satisfied with the so-called tame birds (which our poor weak-minded naturalist calls them) to advertise the fact in this paper. We don't only produce the tame Budgerigar, but the most minute Waxbills and other most tender birds which would not live to undergo faking.—Doria De Von and Co., Ltd., 114, Bethnal Green Road, London.

C. A. LUER.

Telephone—6341 Avenue.

AUSTRALIAN SHELL PARROTS or BUDGERIGARS. NOTICE! ALTERATION IN PRICES.

Only few birds left. These are Australian Budgerigars, from the Adelaide district, and are strongly recommended for fresh blood, being the first imported birds received here for years. To be continually breeding from the present French, inbred stock is dangerous, for it is only a question of time before the youngsters will sicken and die.

One pair for 4/-, including package.
Six pairs for 18/-, including package.
Six hens for 15/-, including package.

Only sold in above quantities; cash will be returned if not approved, but birds must be returned same day.

A few assorted Parrots and Parrakeets, West African Marabou Parrakeet, tame, 20/6; brown-cheeked Conure, 15/6; Canary-winged Parrakeet, 20/6; All-green Conure, 15/6; Alexandra Rock Parrot, 20/6; blue-fronted Amazon, 40/6; yellow-fronted Amazon, 40/6; monster Mealy Amazon, 50/6; yellow-collared Whistling Parrakeet, 40/6; one pair Adelaide Parrakeets, 60/6; one pair blue-bonnet Parrakeets, 50/6; one pair red and blue Macaws, very tame, £8; one Australian Magpie, 40/6; long-tailed glossy Starling, 30/6; cock Virginian Cardinal, 25/6; pair green Cardinals, 50/6; pair Cuban Finches, 40/6; Zebra Finches, 6/-; Ruficauda, 10/6; long-tailed Grass, 10/6; yellow-rumped, 14/6; white-throated Thrush, 25/6; cock blue-throated Warbler, 10/6; seven large Cape Canaries, arrived, cocks, in song—these are considerably larger than the ordinary Senegal Singing Finch, exquisite deep colour, perfect condition, only 7/6 each; green Bulbul, 40/6; Shamah, 40/6; Cordon Bleus, 3/6 pair; Waxbills, 2/6; white Javas, 8/6; yellow Budgerigars, 8/6; American Bunting, 10/6; Demoiselle Cranes, £6 pair; Flamingo, £7. Following animals can be seen in the premises: One Ourang-outang—otherwise "Mrs. Kelly"—still for sale. A very amusing article concerning this interesting animal appeared in the "Morning Leader," 18th inst., her price is £50; one Chimpanzee, female, good size, £40; one small, tame, very playful male Chimpanzee, £30; forty ordinary Rhesus Monkeys, 25/6 each; twenty others, various prices; 14 monster males and females, the latter with young ones.

The largest variety of Foreign birds in Great Britain. Visitors to London are respectfully requested to call and view stock and judge for themselves as to who are naturalists and who are not.

Kindly note, all my stock is kept without any artificial heat. Cleanliness, with fresh air treatment is thoroughly studied at 221, St. George's Street, London Docks.

NORWICH CANARIES.
HOW TO BREED, MANAGE AND EXHIBIT.
By C. A. HOUSE.
Price 1/1 (post free).
The young fancier is told all that he needs to know to enable him to become successful as a breeder and exhibitor.
This work, written in a plain, practical manner, contains much of untold value to lovers of the Norwich Plainhead Canary. The chapters on "**Forming a Stud,**" and "**How to Produce the Ideal**" are worth the cost of the whole book.
CAGE BIRDS, 154, Fleet St., London, E.C.

SOME BREEDING RESULTS OF THE 1910 SEASON.

Notes on the results of the present breeding season, or of any interesting happenings, are invited from the secretaries of societies and others, and must be accompanied by the sender's name and address in every case.
